31957 **(PB—84-151877) Observation of energy level shifts of Rydberg atoms due to thermal fields. Final report.** Hollberg, L.; Hall, J.L. (National Bureau of Standards, Washington, DC (USA)). Oct 1983. 5p. Pub. in Proceedings of Int. Conf. Laser Spectroscopy (6th), Interlaken, Switzerland, June 27-July 1, 1983, p229-2321983.

The authors report the first observation of level shifts of Rydberg states due to their coupling with thermal radiation fields. The Rydberg level positions were measured relative to the atomic ground state using two photon optical Ramsey fringe techniques in an atomic beam apparatus. The level shifts were isolated by chopping the blackbody radiation source. The runs analyzed are consistent with the expected T sup 2 dependence and much data remains to be analyzed.

31958 **(PNL-SA—11768) Algorithm for secondary electron emission from water vapor by high velocity ions.** Wilson, W.E.; Miller, J.H. (Pacific Northwest Lab., Richland, WA (USA)). Apr 1984. Contract AC06-76RL01830. 16p. (CONF-8403123—1). NTIS, PC A02/MF A01; GPO Dep. Order Number DE84011871.

From 32. annual scientific meeting of Radiation Research Society; Orlando, FL, USA (1 Mar 1984).

An algorithm is presented for calculating the cross section, differential in secondary electron energy, for ionization of water vapor by fast bare non-relativistic ions. The algorithm is based on Bethe-theory which describes inelastic scattering as a sum of glancing and hard collisions. Published data were employed to evaluate the two components. The algorithm is written in FORTRAN-77.

31959 **(TRI-PP—82-22) μi charge exchange and muonium formation in low pressure gases.** Fleming, D.G.; Mikula, R.J.; Garner, D.M. (TRIUMF, Vancouver, British Columbia (Canada)). Apr 1982. 36p. NTIS (US Sales Only), PC A03/MF A01. Order Number DE84701806.

Using the basic muon spin rotation technique, the fractions of energetic positive muons thermalizing in diamagnetic environments (fsub(μ)) or as the paramagnetic muonium atom (fsub(Mu)) have been measured in low pressure pure gases (He, Ne, Ar, Kr, Xe, H_2, N_2, NH_3, and CH_4) as well as in several gas mixtures (Ne/Xe, Ne/Ar, Ne/NH_3, Ne/CH_4). In the pure gases, the muonium fractions fsub(Mu) are generally found to be smaller than expected from analogous proton charge exchange studies, particularly in the molecular gases. This is probably due to hot atom reactions of muonium following the charge exchange regime. Comparisons with monium formation in condensed matter as well as positronium formation in gases are also presented. In the gas mixtures, the addition of only a few hundred ppm of a dopant gas, which is exothermic for muonium formation (e.g. Xe), gives rise to an fsub(Mu) characteristic of the pure dopant gas itself, demonstrating the importance of the neutralization process right down to thermal energies. In all cases, the experimental signal amplitudes are found to be strongly pressure dependent, which is interpreted in terms of the time spent by the muon as neutral muonium in the charge exchange regime: tsub(n) < 0.2 ns. This time is generally shorter in the case of molecular gases than in rare gases.

31960 **(TRI-PP—82-23) Spin depolarization in muonium by hydrated electrons.** Percival, P.W.; Brodovitch, J.C.; Newman, K.E. (TRIUMF, Vancouver, British Columbia (Canada)). Jun 1982. 10p. NTIS (US Sales Only), PC A02/MF A01. Order Number DE84701808.

The missing fraction of muon polarization in water is shown to originate from encounters between muonium and hydrated electrons. This takes place at about 1 ns after the primary events in which muonium and hydrated electrons are born.

31961 **(TRI-PP—82-33) Evidence for anisotropic diffusion of Mu in ice and implications for H.** Percival, P.W.; Brodovitch, J-C.; Newman, K.E.; Spencer, D.P. (TRIUMF, Vancouver, British Columbia (Canada)). Sep 1982. 12p. NTIS (US Sales Only), PC A02/MF A01. Order Number DE84701775.

Muonium has been studied in single crystals of H^2O and D^2O. Orientation dependent precession frequencies reveal anisotropy in the hyperfine tensor of muonium. The axial symmetry suggests that Mu atoms diffuse preferentially along the c-axis channels of the ice lattice. H is expected to behave the same way.

31962 **(TRI-PP—82-49) Muonium atoms in liquid and solid neopentane.** Ng, B.W.; Stadlbauer, J.M.; Jean, Y.C.; Walker, D.C. (TRIUMF, Vancouver, British Columbia (Canada)). Oct 1982. 4p. NTIS (US Sales Only), PC A02/MF A01. Order Number DE84701772.

Relatively long-lived muonium atoms have been observed in neopentane (2,2-dimethylpropane). The yields of all muon states are found to be essentially the same in liquid and solid neopentane and the same as those in water. These results have bearings on three matters of current interest in muonium chemistry: the origin of the 'background' spin relaxation; the formation mechanisms; and the change in yields at the liquid-solid phase transition. These data were obtained by the μSR technique (muon spin rotation) at the TRIUMF accelerator.

31963 **(TRI-PP—82-50) Muonium addition to cyanides.** Stadlbauer, J.M.; Ng, B.W.; Jean, Y.C.; Walker, D.C. (TRIUMF, Vancouver, British Columbia (Canada)). Oct 1982. 8p. NTIS (US Sales Only), PC A02/MF A01. Order Number DE84701776.

Muonium, the light radioactive isotope of hydrogen, was found to add to the CN triple bond of acetonitrile, cyanoacetate, cyanide and tetracyanocadmate(II) with room temperature rate constants, K sub(M), of 5.1×10^7, 7.7×10^7, 3.0×10^9, and 1.7×10^{10} (all $M^{-1}s^{-1}$), respectively. While $Cd(CN)_4^{-2}$ is diffusion controlled with an activation energy of approximately 15 kJ/mole the others appear to be activation controlled as with cyanoacetate's activation barrier of approximately 35 kJ/mole. Kinetic isotope effects range from 0.7 to 24.

31964 **(TRI-PP—82-51) Spin-conversion reaction of muonium with nickel cyclam.** Stadlbauer, J.M.; Ng, B.W.; Jean, Y.C.; Walker, D.C. (TRIUMF, Vancouver, British Columbia (Canada)). Dec 1982. 10p. NTIS (US Sales Only), PC A02/MF A01. Order Number DE84701777.

Muonium atoms in aqueous solution were made to interact with nickel cyclam in two spin states, interchanged merely by altering the ionic strength of the solution by addition of an inert salt. The results show that 'triplet' muonium interacts with the paramagnetic ion (octahedral coordination) at about the diffusion-limited rate (2×10^{10} M^{-1} s^{-1}), but with the diamagnetic ion (square planar coordination only) about 100-fold slower. This strongly implies that the interaction with the paramagnetic state is an electron spin-conversion (either spin-exchange or spin-flip). It demonstrates the potential of using the 'triplet' to 'singlet' conversion of muonium, as followed by the muon spin rotation technique (μSR), as a probe of paramagnetism and as a monitor of spin-exchange interactions.

31965 **(UWThPh—83-19) Thomas-Fermi-Von Weizsaecker and Hartree energies as functions of the degree of ionization.** Baumgartner, B. (Vienna Univ. (Austria)). 1982. 14p. NTIS (US Sales Only), PC A02/MF A01. Order Number DE84701770.

The properties of Thomas-Fermi-von Weizsaecker energies as functions of the degree of ionization are studied. A concavity result is established, which can be interpreted as a bound to the decrease of the ionization energies. A numerical calculation of Har-

tree energies is described and the critical ionization is numerically calculated as 1.21.

31966 **Collisional energy transfer in the low-pressure-limit unimolecular dissociation of HO_2.** Brown, N.J.; Miller, J.A. (Applied Science Division, Lawrence Berkeley Laboratory, Berkeley, California 94720). *Journal of Chemical Physics;* **80**: No. 11, 5568-5580(1 Jun 1984).

Classical trajectory calculations are used to investigate the energy transfer properties of HO_2—He collisions under conditions where HO_2 is initially excited to energies near dissociation. The emphasis in this investigation is on determining the dependence of vibrational energy transfer characteristics on heat bath temperature, total molecular energy, and total molecular angular momentum. Vibrational energy transfer is a function of all three variables. Energy transfer averages, correlation coefficients, and energy transfer cross sections are used to determine the energy transfer mechanism. Evidence is found for all types of energy transfer, but the specific mechanism for a particular ensemble is highly dependent on the initial variables. At fixed vibrational energy and heat bath temperature, the magnitude of the average vibrational energy transferred per collision '$<\Delta E'>$' increases with increasing molecular angular momentum. At fixed initial molecular angular momentum and heat bath temperature, -$<\Delta E'>$ increases as the total energy in the molecule increases, except for very low values of initial angular momentum. Increasing the heat bath temperature for fixed values of the other initial variables decreases the magnitude of $<\Delta E'>$. The relative importance of weak and strong collisions in governing the energy transfer characteristics is discussed. In particular, the probability density function for vibrational energy transfer is not well represented by a simple "exponential down" model. A double exponential function is required to represent the long tail of the distribution adequately.

31967 **Electron impact spectroscopy of methane and methane—d_4.** Dillon, M.A.; Wang, R.; Spence, D. (Argonne National Laboratory, Argonne, Illinois 60439). *Journal of Chemical Physics;* **80**: No. 11, 5581-5588(1 Jun 1984). Contract W-31-109-ENG-38.

Electron impact spectra of methane and methane-d_4 have been obtained employing electrons of 200 eV incident energy at scattering angles of 2° to 15° over an energy-loss range that includes the second ionization potential. In the bound state spectrum evidence is presented for the existence of at least one additional state in the region of the 3s transition. A new vibrational progression has been found on the side of a conjectured 4s band lending support to that assignment. One diffuse structure and three new optically forbidden vibrational progressions have been found in a 4 eV range below the $^2A_1$ ion threshold. Evidence indicates that the first three transitions belong to the symmetry forbidden Rydberg series $(2a_1, ns)\leftarrow(2a_1)^2$ where n = 3, 4, and 5. It is suggested that the fourth transition is the first member of a series converging to an excited ion state.

31968 **Differential cross sections for ionization of methane, ammonia, and water vapor by high velocity ions.** Wilson, W.E.; Miller, J.H.; Toburen, L.H.; Manson, S.T. (Radiological Physics Section, Pacific Northwest Laboratory, Richland, Washington 99352). *Journal of Chemical Physics;* **80**: No. 11, 5631-5638(1 Jun 1984).

Cross sections, differential in the energy of secondary electrons, for ionization of methane, ammonia, and water vapor by high energy protons are presented. The results are based on a model that uses photoabsorption and ion impact ionization data to evaluate the coefficients in Bethe's asymptotic cross section for inelastic scattering of high velocity ions. Model cross sections are compared with previously published data and new data on ionization of methane and water vapor by 3.0 and 4.2 MeV protons. The simple, analytic model should be very useful in transport calculations where differential ionization cross sections over a broad range of primary and secondary energies are needed.

31969 **Systematic GVB study of harmonic vibrational frequencies and dipole moment derivatives: The vinyl radical C_2H_3 and other simple molecules.** Dupuis, M.; Wendoloski, J.J. (National Resource for Computation in Chemistry, Lawrence Berkeley Laboratory, University of California, Berkeley, California 94720). *Journal of Chemical Physics;* **80**: No. 11, 5696-5702(1 Jun 1984). Contract AC03-76SF00098.

Structure, harmonic vibrational frequencies, and dipole moment derivatives of methane, ethylene, and acetylene have been obtained from generalized valence bond (GVB) wave function calculations. The results are compared to Hartree—Fock (HF) data, and other correlated wave function data. It is found that the GVB method consistently overemphasizes left—right electron correlation effects, and predicts bond lengths ~0.01—0.02 A longer than experiment. However, the calculated harmonic frequencies are within 4.2% of the observed fundamentals and within 3.5% of the experimental harmonic frequencies. Dipole moment derivatives are in semi-quantitative agreement with experiment. The method is used to predict the IR spectrum of the vinyl radical, including a very intense out of plane bending mode with frequency near 1000 cm^{-1}.

31970 **Application of the semiclassical perturbation approximation to scattering from surfaces. Generalization to include phonon inelasticity.** Hubbard, L.M.; Miller, W.H. (Department of Chemistry and Materials and Molecular Research Division of the Lawrence Berkeley Laboratory, University of California, Berkeley, California 94720). *Journal of Chemical Physics;* **80**: No. 11, 5827-5831(1 Jun 1984).

The semiclassical perturbation (SCP) approximation of Miller and Smith is applied to the inelastic scattering of atoms from solid surfaces. Earlier applications of this approach have been to diffraction (i.e., elastic scattering) of He from LiF and to diffraction and rotationally inelastic scattering of H_2 from LiF, and the present work is an extension which allows for motion of the surfaces atoms (and thus phonon inelasticity). Therefore, phenomena that involve energy transfer between the surface and gas molecules can be described. In the present work sticking probabilities are calculated for He—W(110) and Ne—W(110), and the results show that a simple model such as this one can be quite useful in predicting energy transfer in gas—solid scattering systems.

31971 **Total and orbital SCF energies in molecules.** Schaad, L.J.; Hess, B.A. Jr.; Schwartz, M.E. (Department of Chemistry, Vanderbilt University, Nashville, Tennessee 37235). *Journal of Chemical Physics;* **80**: No. 11, 5861-5862(1 Jun 1984).

Results of extensive calculations are given for the SCF electronic energy in molecules. The total SCF energies were calculated with the 3-21G basis set.

31972 **Alpha-particle-induced, inner-shell ionization measurements for the undergraduate laboratory.** Desmarais, D.; Duggan, J.L. (University of Alberta, Edmonton, Canada T6C 4G9). *American Journal of Physics;* **52**: No. 6, 507-513(Jun 1984).

The interaction of α particles with low atomic number elements has been studied in an attempt to determine the inner-shell ionization cross section. These cross sections were determined by measuring the characteristic x rays that were produced when a thin aluminum target was bombarded by α particles from a 48-MBq ^{234}Cm α source. The x rays were detected with a Si(Li) x-ray detector whose resolution was 190 eV at 5.9 keV. The efficiency of the detector was determined from standard radioactive sources. The energies of the α particles were varied by placing thin Mylar absorbers between the α source and the target. The results are favorably compared to a current ionization theory given in such a form that an undergraduate physics major can do the calculations. This experiment is intended as an undergraduate laboratory experiment in the atomic or nuclear area.

31973 **Self-consistent time-dependent, Hartree-Fock calculation for a reactive molecular collision.** Tiszauer, D.; Kulander, K.C. (Lawrence Livermore National Laboratory, Livermore, California 94550). *Physical Review [Section] A: General Physics;* **29**: No. 5, 2909-2911(May 1984).

We report the first calculations on a molecular collision system using a fully self-consistent time-dependent Hartree-Fock (TDHF) method. The nuclear motion is treated classically with the forces determined by the time propagating electronic charge density. The electronic state is generated using a finite-difference TDHF calculation. We present results including a typical reactive trajectory, a corresponding time evolution of the electronic energy, and density plots of the molecular wave function evolving through the collision.

31974 **Electron-impact double ionization of rare-gas ions.** Pindzola, M.S.; Griffin, D.C.; Bottcher, C.; Crandall, D.H.; Phaneuf, R.A.; Gregory, D.C. (Atomic Theory Group, Physics Division, Oak Ridge National Laboratory, Oak Ridge, Tennessee 37830). *Physical Review* [*Section*] *A: General Physics;* **29**: No. 4, 1749-1756(Apr 1984).

Cross sections for the removal of two electrons from rare-gas ions by single collisions with incident electrons have been both measured using crossed beams of ions and electrons, and calculated using Hartree-Fock distorted-wave theory. For initial ions Ar^{4+}, Kr^{4+}, and Xe^{4+} the measured peak cross sections are 1.4×10^{-18}, 6.5×10^{-18}, and 9.0×10^{-18} cm^2, respectively. These measurements confirm and extend the measurements of Mueller and Frodl and of Achenbach et al. Calculations were performed for the charge-state-4+ ions and for Xe^{+}, Xe^{2+}, and Xe^{3+}. Comparison of experiment and theory indicates that the double ionization of rare-gas ions is dominated by the indirect mechanism of inner-shell single ionization followed by autoionization. The distorted-wave calculations for the 4d ionization cross section of Xe/sup q/+ (q = 1 to 4) ions are strongly influenced by term dependence in the ejected-electron continuum, and by ground-state correlations.

31975 **Comparison of multiconfiguration Dirac-Fock and multiconfiguration relativistic random-phase-approximation transition-energy calculations in the beryllium isoelectronic sequence.** Frye, D.; Armstrong, L. Jr. (Department of Physics, The Johns Hopkins University, Baltimore, Maryland 21218). *Physical Review* [*Section*] *A: General Physics;* **29**: No. 4, 2220-2221(Apr 1984). Contract AC02-76ET53006.

Transition energies from the $^1S_0$ ground state to the $^1P_1$ and $^3P_1$ excited states in the beryllium isoelectronic sequence are calculated using standard multiconfiguration Dirac-Fock (MCDF) theory. These predictions are then compared to those of the multiconfiguration relativistic random-phase-approximation (MCRRPA) theory and with experiment.

31976 **Relativistically corrected Schroedinger equation with Coulomb interaction.** Friar, J.L.; Tomusiak, E.L. (Theoretical Division, Los Alamos National Laboratory, Los Alamos, New Mexico 87545). *Physical Review* [*Section*] *C: Nuclear Physics;* **29**: No. 4, 1537-1539(Apr 1984).

A simple alternative derivation of the S-wave eigenvalues of the relativistically corrected Schroedinger equation with a Coulomb interaction is presented. It illustrates the utility of Laplace transform methods. The pionic atom problem is discussed.

31977 **(UTIAS—250) Dusty-gas shock tube.** Miura, H.; Glass, I.I. (Toronto Univ., Ontario (Canada). Inst. for Aerospace Studies). May 1981. 81p. NTIS (US Sales Only), MF A01. Order Number DE84901157.

Microfiche only, copy does not permit paper copy reproduction.

Analytical and numerical methods were used to investigate the flow induced by a shock wave in a shock-tube channel containing air laden with suspended small solid particles. Exact results ae given for the frozen and equilibrium shockwave properties as a function of diaphragm-pressure ratio and shock-wave Mach numbers. The driver contained air at high pressure. A modified random-choice method together with an operator-splitting technique show clearly both the decay of a discontinuous frozen shock wave and a contact discontinuity and the formation of a stationary shock structure and an effective contact front of finite thickness. The effects of particle diameter, particle-number density and diaphragm-pressure ratio on the transitional behavior of the flow are investigated in detail. The alteration of the flow properties due to the presence of particles is discussed in detail and compared with classical shock-tube flows. 20 references.

31978 **Long-time states of inverse cascades in the presence of a maximum length scale.** Hossain, M.; Matthaeus, W.H.; Montgomery, D. (College of William and Mary, Williamsburg, VA (USA). Dept. of Physics). *Journal of Plasma Physics;* **30**: 479-493(Dec 1983).

It is shown numerically, both for the two-dimensional Navier-Stokes (guiding-centre plasma) equations and for the two-dimensional magnetohydrodynamics, that the long-time asymptotic state in a forced inverse-cascade situation is one in which the spectrum is completely dominated by its own fundamental. The growth continues until the fundamental is dissipatively limited by its own dissipation rate.

31979 **(ANL-HEP-CP—84-19) Need to plan for a full-scale lns-physics program at the SSC.** White, A.R. (Argonne National Lab., IL (USA)). Mar 1984. Contract W-31-109-ENG-38. 6p. (CONF-840275—8). NTIS, PC A02/MF A01; GPO Dep. Order Number DE84011811.

From Workshop on anti pp options for the SSC; Chicago, IL, USA (13 Feb 1984).

Arguments for a full lns physics program at the SSC are enumerated and elaborated on. They are: first - the inadequacy of data from a minimal program, second - the potential fundamental significance of a high-energy soft physics collective phenomenon and third - the possible diffractive production of much of the interesting new physics that will be searched for.

31980 **(BNL—34316) Particle ratios at high transverse momentum in pp collisions at $\sqrt{s}$ = 63 GeV and correlations between high p/sub T/ identified charged particles and associated identified charged particles.** Akesson, T.; Albrow, M.G.; Almehed, S.; Batley, R.; Benary, O.; Boggild, H.; Botner, O.; Breuker, H.; Brody, H.; Burkert, V. (Brookhaven National Lab., Upton, NY (USA); Bonn Univ. (Germany, F.R.). Physikalisches Inst.; Cambridge Univ. (UK); European Organization for Nuclear Research, Geneva (Switzerland); Niels Bohr Inst., Copenhagen (Denmark); Lund Univ. (Sweden)). 1983. Contract AC02-76CH00016. 22p. (CONF-830718—31). NTIS, PC A02; 3; GPO Dep. Order Number DE84010512.

From International Europhysics conference on high energy physics; Brighton, UK (20 Jul 1983).

Paper copy only, copy does not permit microfiche production.

The production of identified charged particles in pp collisions at $\sqrt{s}$ = 63 GeV with an identified high p/sub T/ trigger particle emitted in the central region is studied. The measurements were performed at the CERN ISR using the Axial Field Spectrometer. Trigger particle ratios, $\sigma(\pi^{+-})/\sigma(\text{all}^{+-})$, $\sigma(K^{+-})$ and $\sigma(p^{+-})/\sigma(\text{all}^{+-})$ are presented for p/sub T/ from 5 GeV/c to 8 GeV/c. In addition $\sigma(\pi^{+-})/\sigma(\text{all}^{+-})$ is presented in the p/sub T/ region from 2.5 GeV/c to 4.5 GeV/c. The charge compensation in the hemisphere containing the trigger particle is shown to depend strongly on the identity of the trigger particle and on the identity of the associated particles. 13 references.

31981 **(DOE/ER/40039—T1) High energy physics research at Texas A & M University. Annual progress report, January 1, 1983-December 31, 1983.** Webb, R.C. (Texas A and M Univ., College Station (USA). Portions are illegible in microfiche products.

During the past twelve months our group has made significant advances in both experiments with which we are involved. We present here an updata on our group's underground super heavy

magnetic monopole search and a report on the latest designs of the forward hadron calorimeter system which the TAMU group is to build for the Collider Detector Facility (CDF) at Fermilab. 16 references.

31982 **(FERMILAB-CONF—84/33-T) Search for neutral, penetrating, metastable particles produced in the SLAC beam dump.** Bjorken, J. (Fermi National Accelerator Lab., Batavia, IL (USA)). Mar 1984. Contract AC02-76CH03000. 13p. (CONF-840150—5). NTIS, PC A02/MF A01; GPO Dep. Order Number DE84012468.

From 4. Moriond workshop on massive neutrinos in particle and astro-physics; La Plagne, France (15 Jan 1984).

A search was made for neutral objects which might be produced by 20 GeV electrons incident on the SLAC beam dump, penetrate the downstream natural shielding, and decay upstream of an electromagnetic shower calorimeter. With about 30 coulombs of electrons dumped, no candidate events were found above an energy of $\sim$ 2 GeV. Preliminary analysis implies the 95% confidence level limit on the product of mass and lifetime of light axion-like bosons decaying primarily into two photons to be greater than 0.8 keV-sec. Preliminary limits on photino parameters are also given.

31983 **(IFVE-OEF—83-17) Inclusive neutral pion production in interactions of positive particles with beryllium nuclei at 10.5 GeV/c.** Akimenko, S.A.; Bannikov, A.V.; Belousov, V.I.; Blik, A.M.; Kolosov, V.N.; Krumshtejn, Eh.V.; Kuttin, V.M.; Pavlinov, A.I.; Romanovskij, V.I.; Solov'ev, A.S. (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Serpukhov. Inst. Fiziki Vysokikh Ehnergij). 1983. 8p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. Order Number DE84701809.

The experimental results concerning inclusive π^0- meson production in positive hadron (π^+, K, p)-berillium interactions at 10.5 GeV/c are presented. Dependences of invariant inclusive cross sections and their ratio on the value of the Feynman variable and transverse momentum.

31984 **(IFVE-OEF—83-81) Inclusive eta meson production by positive hadrons with the momentum of 10.5 GeV/c.** Akimenko, S.A.; Bannikov, A.V.; Belousov, V.I.; Blik, A.M.; Kolosov, V.N.; Krumshtejn, Z.V.; Kut'in, V.M.; Pavlinov, A.I.; Romanovskij, V.I.; Solov'ev, A.S. (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow. Inst. Atomnoj Ehnergii). 1983. 8p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. Order Number DE84701803.

The experimental results concerning inclusive eta meson production in hadron (π^+, K$^+$, p) - berillium interactions at 10.5 GeV/c are given. The comparison of the inclusive distributions of the eta-mesons producted by various beam particles is carried out. The data on invariant inclusive cross sections of eta meson production in different beams are discussed. It is shown that with the growth of Feynman variable the decrease of relative eta meson yield in Kaon and proton beams in relation to pion one is observed.

31985 **(IFVE-OEF—83-94) Study on the elastic πip p interactions at 40 GeV/c in the impact parameter representation.** Chujko, B.V.; Apokin, V.D.; Arestov, Yu.I.; Kozlovskij, E.A.; Matulenko, Yu.A.; Meshchanin, A.P.; Nurushev, S.B.; Siksin, V.V.; Solov'ev, L.F.; Solov'yanov, V.L. (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Serpukhov. Inst. Fiziki Vysokikh Ehnergij). 1983. 17p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. Order Number DE84701804.

Results on study of elastic π^{+-}p scattering at 40 GeV/c in terms of the impact parameter are presented. It is shown that in the range of small momentum transfers the imaginary part of non-spin-flip scattering amplitude gives the main contribution into the differential cross section. Overlap functions and r. m. s. radii in transverse plane are determined. The pion and proton transparency in a head-on collision is 0.17 being four times as much as similar value in pp-scattering. Energy evolution of the transparency and eikonal is discussed.

31986 **(IFVE-OEF—83-109) Observation of a structure in PHIπ0 mass spectrum.** Bityukov, S.I.; Dorofeev, V.A.; Dzhelyadin, R.I. (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Serpukhov. Inst. Fiziki Vysokikh Ehnergij). 1983. 6p. (SERP-E—142). NTIS (US Sales Only), PC A02/MF A01. Order Number DE84701802.

A structure with the mass of (1430+-20) MeV/c^2 and the width of (100+-30) MeV/c^2, C(1430), has been observed in the mass spectrum of the phiπ^0 system produced in the charge exchange reaction π^0p$\rightarrow$phiπ^0n at 32.5 GeV/c pion momentum. Its statistical significance is more than 8 standard deviations. C(1430) state has an isospin I=1, odd charge parity and spin >=1.

31987 **(INIS-mf—8708) Study of the space-time structure of the leptonic weak charged current by measurement of the muon polarization from the reaction anti νsub(μ)+Fe->X+μ^+.** Metz, E. (Hamburg Univ. (Germany, F.R.). Fachbereich Physik). 10 Sep 1982. 125p. (In German). NTIS (US Sales Only), PC A06/MF A01. Order Number DE84780226.

An experiment for the measurement of the longitudinal polarization of muons was performed which were produced in the deep inelastic anti ν-nucleon scattering in an irontarget (CDHS detector). The muon decay was applied as indicator of the muon polarization. As polarimeter served a marmor-scintillator calorimeter (CHARM detector). The experiment was performed in the broad-band beam of the CERN SPS. Measured was the longitudinal polarization P = 0.82 +- 0.07 (stat.) +- 0.12 (syst.). That means that the weak charged current possesses a dominant vector and/or axial-vector structure. Regarding the measuring errors of the muon polarization an upper limit for possible S-, P-, and T- contributions to the weak charged current can be stated: sigmasub(S,P,T)/sigmasub(TOT) < 20%. A measurement of the muon polarization for large y (y > 0.5) relatively to the muon polarization for small y (y < 0.2) yields a longitudinal polarization P(y > 0.5) = 1.10 +- 0.24 (stat.). The systematic error vanishes in this relative measurement. Measured value and error lead to an upper limit for S- and/or P-contributions: sigmasub(S,P):sigmasub(TOT) < 7%. From the inelasticity distributions in the ν nucleon scattering a comparable upper limit of 6% for the contribution of S- and/or P-terms to the weak charged currents can be obtained. Summarizing it can be said that the leptonic weak charged current possesses also at large momentum transfer (Q^2 approx.= 4 (GeV/c)^2) a vector and/or axial-vector structure. (orig./HSI).

31988 (INIS-SU—196, pp 10-12) **Polarization measuring for proton of recoil in the γ+p $\rightarrow$ p+π^0 reaction at Esub(γ)=0,65-1,4 GeV for the angles THETAsub(π) < 90 deg in the center-of-mass system.** Bratashevskij, A.S.; Zybalov, A.A.; Karasev, S.P.; Konovalov, O.G.; Sorokin, P.V.; Tenishev, A.Eh. 1982. (In Russian). NTIS (US Sales Only), PC A05/MF A01. Order Number TI84780041. (CONF-8105209—No.1(19)).

From All-union seminar electromagnetic interactions of hadrons in the resonance energy range; Khar'kov, Ukrainian SSR (26 May 1981).

Measurement results of proton polarization in the γ+p $\rightarrow$ p+π^0 reactions at the angles of Qsub(π) < 90 deg in the c. m. s. in the 0.65-1.4 GeV photon range are presented. The measurements are conducted by means of an optical spark chamber telescope and a magnetic spectrometer on a linac photon beam. The measurement results are compared with the Metkalf-Walker (MW) phenomenological analysis. The energy dependence of polarization does not agree with the MW analysis at 1.1-1.4 GeV.

31989 (INIS-SU—196, pp 3-6) **Polarization parameters Σ, T, P for the γp $\rightarrow$ pπ^0 reaction in the 280-450 MeV photon energy range.** Belyaev, A.A.; Get'man, V.A.; Gorbenko, V.G. (and others). 1982. (In Russian). NTIS (US Sales Only), PC A05/MF A01. Order Number TI84780041. (CONF-8105209—No.1(19)).

From All-union seminar electromagnetic interactions of hadrons in the resonance energy range; Khar'kov, Ukrainian SSR (26 May 1981).

The results of experimental investigation into polarization parameters Σ (asymmetry of cross sections for linearly polarized photons), T (asymmetry of cross sections on a polarized proton target), P (polarization of recoil protons) for the reaction of neutral pion photoproduction on a proton are presented. The measurements are conducted within the frames of the double polarized experiment of polarized beam-polarized target type for 280, 300, 320, 350, 380, 400, 420 and 450 MeV photon energies and for pion exit angle within 60-135 deg range. The experimental results are compared with predictions of phenomenological multipole analyses and experimental results of other laboratories. The obtained data may be used for multipole analysis of the $\gamma p \rightarrow p\pi^0$ reaction.

31990 **(JINR—R-1-83-432) Experimental data on the inclusive cross sections of protons, deuterons and tritium cumulative production.** Baldin, A.M.; Bondarev, V.K.; Ghiordanescu, N. (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of High Energy). 1983. 24p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. Order Number DE84701697.

The invariant inclusive cross section of proton, deuteron and tritium production in pA- and dA-interactions with 8.9 GeV/c incident momentum are presented. The energy, angular (within the 90 deg - 180 deg), and A-dependences are studied. Angular dependence is carried out for 500, 700 and 900 MeV/c in pA-interactions and for 700 MeV/c in dA-interaction. Within 8-400 GeV incident energy range, the limiting fragmentation takes place. The universal character of the particle cross section dependence on the emission angle is an indication to the proportionality of the nuclear quark-parton structure function.

From 3. LAMPF II workshop; Los Alamos, NM, USA (18 Jul 1983).

Portions are illegible in microfiche products. Original copy available until stock is exhausted.

The aim of this workshop was twofold: (1) to continue to identify areas of fundamental physics that become accessible with a facility such as the proposed LAMPF I accelerator, and (2) to plan specific experiments that aim at such fundamental studies. This volume contains nine invited papers, thirty-seven summaries of the working group sessions, seven summaries of facility requirements, and four conference summaries. Separate abstracts were prepared for fifty-four of the fifty-seven papers; three papers were previously included in the data base. (WHK)

31993 **(LBL—17795) Lifetime of the tau lepton.** Amidei, D.E. (Lawrence Berkeley Lab., CA (USA)). May 1984. Contract AC03-76SF00098. 117p. NTIS, PC A06/MF A01; 1; GPO Dep. Order Number DE84012307.

Portions are illegible in microfiche products; Thesis.

We have installed a high resolution vertex detector in the Mark II at PEP, and used this detector in a precision measurement of the life-time of the tau lepton. The result is tau/sub tau/ = (2.80 +- .24 +- 0.25) x 10^{-13} seconds where the first error is statistical, and the second is systematic. This result implies that the tau couples to the charged weak current with an amplitude within 7% of the universal Fermi coupling strength. 30 references.

31994 **(LUIP—8311) Search for charmed particles in neutrino induced reactions. A study of light-ion collisions at very high energy.** Claesson, G. (Lund Univ. (Sweden). Dept. of Cosmic and Subatomic Physics). 1983. 95p. (LUNFD6/NFFK—7034/1-27(1983)). NTIS (US Sales Only), PC A05/MF A01. Order Number DE84701810.

A hybrid experiment with nuclear emulsion as target and vertex detector and downstream spark-chambers, analyzing magnet and a calorimeter with flash-tube read-out was set up at Fermilab in 1978. The neutrino beam at FNAL was used. 5-10percent of the neutrino events in the emulsion were expected to produce charmed particles. The properties of these was the main aim of the experiment. The procedure to make emulsion pellicles from emulsion gel is described. A method to detect short-lived particles with life-times down to 10^{-15}s was developed and applied on neutrino events. The second part of the thesis concerns a study of light-ion collisions at the highest c.m. energies yet reached for accelerator produced collisions involving nuclei. Elastic scattering in alpha-alpha and alpha-proton collisions at SQR(S) 125 GeV and 88 GeV. resp., was studied and compared to Glauber model calculations. Fragmentation of alpha-particles was also studied. Hadron production at large p(sub)t was measured and compared to pp-collions.

31995 (LUIP—8311, pp 12) **Method for analyzing elastic scattering data sampled with the SFM-detector at the CERN ISR.** Claesson, G. 1983. B. Order Number TI84701810. (LUIP—8312; LUNFD6/NFFK—7035/1-12(1983)).

In Search for charmed particles in neutrino induced reactions. A study of light-ion collisions at very high energy.

This paper describes a method for determination of the squared 4-momentum transfer, t, in elastic collisions sampled with the Split-Field-Magnet detector (SFM) at the CERN ISR. The t-values are calculated from the measured scattering angles and initial momenta of the beam particles. The method determines t with a relative error of 2percent in Monte-Carlo generated elastic events. The method seems to be effective in rejecting inelastic events by means of a chi^2-test.

31996 **(RL—83-059) Comparison of charged current cross-sections and structure functions for neutrino and antineutrino beams on hydrogen and neon.** (Rutherford Appleton Lab., Chilton (UK)). Jul 1983. 18p. NTIS (US Sales Only), PC A02/MF A01. Order Number DE84701805.

Using BEBC equipped with a hydrogen-filled neon-surrounded track sensitive target, the charged current cross sections and structure functions of hydrogen and neon targets traversed by the same neutrinos and antineutrinos are compared directly. The measured total cross section ratios between hydrogen and neon allow precise total cross section values for hydrogen to be inferred. Using this normalisation, the ν and ν-bar hydrogen data are combined and the quark distributions in free nucleons, parametrised as functions of xi, are extracted. This free-nucleon parametrisation is then compared directly with the neon data in order to measure nuclear effects such as those recently reported by the EMC collaboration. Only small effects are seen, in excellent agreement with recent SLAC data in a more similar A and q^2 range.

31997 **(SLAC-PUB—3312) New results on radiative J/psi decays from MARK III at SPEAR.** Wermes, N. (Stanford Linear Accelerator Center, CA (USA)). Apr 1984. Contract AC03-76SF00515. 20p. (CONF-8403121—3). NTIS, PC A02/MF A01; 1; GPO Dep. Order Number DE84012222.

From New particle production at high energy meeting: The Recontre de Moriond; La Plagne, France (4 Mar 1984).

Portions are illegible in microfiche products. Original copy available until stock is exhausted.

Selected topics on radiative decays of the J/psi from MARK III at SPEAR are presented. These topics include the decay J/psi → γK anti K where the final state resonances f'(1515), θ(1700) and ξ(2200) have been analyzed. The decay J/psi → (γ vector vector) is

presented in three final states, J/psi → γ phi phi, γ rho rho and γωω, providing the first measurement of the eta/sub c/ spin-parity (in γ phi phi) and evidence for structures (in γ rho rho and γωω) near 1.7 GeV. 24 references.

31998 **(SLAC-PUB—3323) Weak decays at PEP.** Yelton, J.M. (Stanford Linear Accelerator Center, CA (USA)). Apr 1984. Contract AC03-76SF00515. 13p. (CONF-840280—5). NTIS, PC A02/MF A01; GPO Dep. Order Number DE84012512.

From Recontre de Moriond meeting on electro weal interactions and unified theories; La Plaque, France (26 Feb 1984).

Results are presented on four aspects of weak decays. The MARK II measurement of the tau lifetime, the MARK II measurement of the D^0 lifetime, the measurement from several experiments of the semi-leptonic branching fractions of hadrons constraining b and c quarks, and lastly the MAC measurement of the B lifetime. 30 references.

31999 **(SLAC-PUB—3335) New particle searches at PEP.** Band, H.R. (Northeastern Univ., Boston, MA (USA). Dept. of Physics; Stanford Linear Accelerator Center, CA (USA)). May 1984. Contract AC03-76SF00515. 11p. (CONF-840280—6). NTIS, PC A02/MF A01; GPO Dep. Order Number DE84012892.

From Recontre de Moriond meeting on electro weal interactions and unified theories; La Plaque, France (26 Feb 1984).

New particle searches by TPC, MARK II, and MAC are reviewed. No evidence of supersymmetric particle production has been seen in two possible reactions. Improved lower bounds on the e mass have been set. The TPC search for charge (4/3)e particles is reported. 14 references.

32000 **(SLAC-PUB—3336) Lifetime measurements and tau physics at PEP.** Gladney, L.D. (Stanford Linear Accelerator Center, CA (USA)). May 1984. Contract AC03-76SF00515. 8p. (CONF-8404163—1). NTIS, PC A02/MF A01; GPO Dep. Order Number DE84012375.

From 6. international conference on high energy physics; Nashville, TN, USA (5 Apr 1984).

Recent updates on the measurements of the tau and D^0 lifetimes by the Mark II Collaboration and on measurements of the tau and B-hadron lifetimes by the MAC Collaboration are presented. A new determination of an upper limit for the tau neutrino mass by the Mark II Collaboration and a recent measurement of Cabibbo-suppressed tau decay branching ratios from the DELCO Collaboration are also presented. 18 references.

32001 **(SLAC-PUB—3345) Ep option at the SSC.** Prescott, C.Y. (Stanford Linear Accelerator Center, CA (USA)). May 1984. Contract AC03-76SF00515. 7p. (CONF-840154—2). NTIS, PC A02; 3; GPO Dep. Order Number DE84012228.

From PSSC fixed target workshop; Woodland, TX, USA (27 Jan 1984).

Paper copy only, copy does not permit microfiche production. Original copy available until stock is exhausted.

The possibilities for colliding electrons with the 20 TeV proton beams of the SSC are considered. Kinematics of ep colliding beams is reviewed. Energies that may be possible and interesting are suggested, and detector problems associated with the highly imbalanced collisions are briefly considered.

32002 **(TRI-PP—82-20) Low-energy n-p capture as a probe of two-nucleon dynamics.** Greben, J.M.; Woloshyn, R.M. (TRIUMF, Vancouver, British Columbia (Canada)). May 1982. 17p. NTIS (US Sales Only), PC A02/MF A01. Order Number DE84701811.

We examine the sensitivity of the cross section and polarization observables in radiative neutron-proton capture to the uncertainty in the two-nucleon potential at short and intermediate range. These uncertainties are modelled by unitary phase-equivalent transformations of the Hamiltonian. We find that the photon linear polarization is very sensitive to the resulting changes in the wave functions. The neutron analyzing power is rather insensitive to these changes and could play a role in identifying effects not included in a potential model description.

32003 **(TRI-PP—82-27) Decay π0→μe.** Bryman, D. (TRIUMF, Vancouver, British Columbia (Canada)). Jul 1982. 7p. NTIS (US Sales Only), PC A02/MF A01. Order Number DE84701812.

An upper limit for the branching ratio of the decay $\pi^0 \rightarrow \mu e$ is determined from existing experimental data to be lambda($\pi^0 \rightarrow \mu e$)/lambda($\mu^0 \rightarrow$ all) $< 7 \times 10^{-8}$ (90 percent C.L.). Phenomenological implications are discussed. The sensitivity of $\pi^0 \rightarrow \mu e$ decay to the presence of Higgs particles responsible for muon number violation is found to be considerably lower than for muon-electron conversion in the field of a nucleus.

32004 **(TRI-PP—82-41) Pion production from deuterium by the bombardment with polarized protons of 277 and 500 MeV.** Lolos, G.J.; Auld, E.G.; Giles, G.; Jones, G.; McParland, B.; Ottewell, D.; Walden, P.L.; Zeigler, W. (TRIUMF, Vancouver, British Columbia (Canada)). Nov 1982. 6p. NTIS (US Sales Only), PC A02/MF A01. Order Number DE84701814.

Analyzing power measurements of the (anti) pd → tπ^+ reaction are reported at incident proton energies of 277 and 500 MeV. The 277 MeV results span the angular range from 70° to 130° in the centre of mass while the two 500 MeV measurements at large angles were taken as a check of published results. With the angular distribution of the analyzing power at 277 MeV being now available, an examination of the energy dependence of the analyzing power shows that it exhibits characteristics closely resembling the shape and magnitude of the distribution observed for nuclei in the 9-12 mass range.

32005 **(TRI-PP—82-42) New Measurement of the $\pi \rightarrow e\nu$ branching ratio.** Dixit, M.S.; Robertson, B.C.; Bryman, D.A.; Dubois, R.; Numao, T.; Olaniyi, B.; Olin, A.; Berghofer, D.; Poutissou, J.-M.; Macdonald, J.A. (TRIUMF, Vancouver, British Columbia (Canada)). Nov 1982. 6p. NTIS (US Sales Only), PC A02/MF A01. Order Number DE84701815.

A new measurement of the $\pi \rightarrow e\nu$ branching ratio yields GAMMA($\pi \rightarrow e\nu$ + $\pi \rightarrow e\nu\gamma$) / GAMMA($\pi \rightarrow \mu\nu$ + $\pi \rightarrow \gamma\nu\mu$) = (1.218 +- 0.014) x 10^{-4}. The measured value is in good agreement with the standard model prediction incorporating electron-muon universality.

32006 **(TRI-PP—82-43) Search for massive neutrinos in $\pi \rightarrow e\nu$ decay.** Dixit, M.S.; Bryman, D.A.; Dubois, R.; Numao, T.; Olaniyi, B.; Olin, A.; Poutissou, J.M.; Macdonald, J.A. (TRIUMF, Vancouver, British Columbia (Canada)). Nov 1982. 5p. NTIS (US Sales Only), PC A02/MF A01. Order Number DE84701807.

The positron spectrum from $\pi^+ \rightarrow e^+ \nu_e$ decay has been examined for evidence of peaks arising from an admixture in the ν_e weak eigenstate of massive neutrinos. Limits on the intensity of such peaks, together with the measured $\pi \rightarrow e\nu$ branching ratio, have been used to derive constraints on the neutrino mixing parameters over the range 4 MeV $< m(\nu) <$ 120 MeV.

32007 **(TRI-PP—82-53) Spin-spin correlations in the reaction (anti)p(anti(p)) → pnπ+ at intermediate energies.** Shypit, R.; Waltham, C.E.; Axen, D.A. (TRIUMF, Vancouver, British Columbia (Canada)). Dec 1982. 3p. NTIS (US Sales Only), PC A02/MF A01. Order Number DE84701799.

Spin-spin correlation parameters A sub(LL), A sub(SL) A sub(NN), and A sub(SS) been measured for the reaction (anti)p(anti)p → pnπ^+ with incident beam energies of 510, 465 and 420 MeV. Clean separation of free-proton events from the carbon background has been achieved.

32008 **(TRI-PP—83-6) M1 suppression in pion photoproduction on ^{13}C.** Tiator, L. (TRIUMF, Vancouver, British Columbia (Canada)). Feb 1983. 6p. NTIS (US Sales Only), PC A02/MF A01. Order Number DE84701816.

Recently measured anomalously low cross sections for $^{13}C(\gamma,\pi^-)^{13}N$ at low energy and theta sub(π)sup(lab) = 90 degrees have been analyzed in a DWIA calculation. It has been found that

the EO contribution alone is able to explain the data, so that the MI cross section is expected to vanish. Using constraints from recent magnetic electron scattering, an explanation is possible by assuming a significantly lower reduced density matrix element for spin-flip isovector transitions with angular momentum L = 2 than predicted by Cohen-Kurath.

32009 **(UNIGRAZ-UTP—07-83) Nucleon-deuteron low energy parameters.** Zankel, H.; Mathelitsch, L. (Graz Univ. (Austria)). 1983. 13p. NTIS (US Sales Only), PC A02/MF A01. Order Number DE84701758.

Momentum space Fadeev equations are solved for nucleon-deuteron scattering and effective range parameters are calculated. A reverse trend is found in the two spin states by ^{4}asub(nd) < ^{4}asub(pd) and ^{2}asub(pd) < ^{2}asub(nd) which is in agreement with a configuration space calculation, but in conflict with all existing experiments. The Coulomb contributions to the effective range are small in quartet but sizeable in doublet scattering.

32010 **Limits on muon-neutrino oscillations in the mass range $30<\Delta m^2<1000$ eV^2/c^4.** Stockdale, I.E.; Bodek, A.; Borcherding, F.; Giokaris, N.; Lang, K.; Garfinkle, D.; Merritt, F.S.; Oreglia, M.; Reutens, P.; Auchincloss, P.S. . (Department of Physics and Astronomy, University of Rochester, Rochester, New York 14627). *Physical Review Letters;* **52**: No. 16, 1384-1388(16 Apr 1984).

A search for inclusive muon-neutrino (ν/sub μ/) oscillations has been performed in the Fermilab narrow-band neutrino beam using two detectors running simultaneously at two distances from the neutrino source. The data show no evidence for a distance dependence of the neutrino flux and rule out oscillations of ν/sub μ/ into any other single type of neutrino for $30<\Delta m^2<1000$ eV^2/c^4 and $\sin^2(2\theta)>0.02$—0.20.

32011 **Azimuthal asymmetry of negatively charged hadrons in the anti $\nu N \rightarrow \mu^+ h^- X$ reaction.** Ammosov, V.V.; Asratyan, A.Eh.; Berge, D.P. *Pis'ma v Zhurnal Eksperimental'noi i Teoreticheskoi Fiziki;* **38**: No. 4, 210-211(25 Aug 1983). (In Russian).

Short note. For English translation see the journal JETP Letters (USA).

32012 **Muon-decay neutrinos and limits on neutrino oscillations.** Nemethy, P. (Lawrence Berkeley Laboratory, Berkeley, CA 94720). pp 263-270 of Gauge theories, massive neutrinos, and proton decay. Kursunoglu, B.; Perlmutter, A. New York, NY; Plenum Publishing Corp. (1981). (CONF-810134—).

From Orbis scientiae conference; Fort Lauderdale, FL, USA (19 Jan 1981).

This chapter presents some "doubly parasitic" results on neutrino oscillations by further analysis of a low energy neutrino experiment at Los Alamos originally conducted with a different motivation. Assumes that oscillations occur between only two neutrino states. Shows the neutrino spectra obtained from 400 coulombs and 1000 coulombs of protons, respectively on D_2O and H_2O. Concludes that, within stated limits, there is no evidence for neutrino oscillations in either channel.

From 1. international conference on the physics of the 21st century; Tuscon, AZ, USA (5 Dec 1983).

Portions are illegible in microfiche products.

One of the most exciting developments in the physics of the 20th Century is the proposal that locally gauge invariant groups describe the strong, electromagnetic and weak interactions. SU(2)/sub L/ x U(1) the electroweak group has had enormous successes including the recent discovery of the W/sup +-/ and Z^0. In the case of strong interactions, Quantum Chromodynamics is built upon the local gauge invariance of SU(3)/sub color/ which gives rise to the eight massless spin 1 gauge bosons which carry color called gluons. The colored quarks are then added to yield Quantum Chromodynamics (QCD). Although there have been many dynamical and static successes of QCD, there has been one important missing link in QCD which casts a dark shadow over it and SU(3)/sub color/. Let us assume the strong interactions are described by locally gauge invariant SU(3)/sub color/ in a pure Yang Mills theory. Then if we consider the effects of confinement one is inescapably led to the existence of glueballs (multigluon resonant states). Experimentally we found vast numbers of q anti q states and qqq states but until recently no convincing evidence for glueballs. Fortunately recent work has led to the discovery of glueballs provided one assumes the following two simple input axioms: (1) QCD is correct and (2) the OZI (or Zweig) Rule is universal for weakly coupled glue in disconnected Zweig diagrams where the disconnection is caused by creation or annihilation of new flavors of quarks. There are other glueball candidates found in the radiative J/psi decays and some relatively weaker candidates from direct pattern recognition in hadronic spectroscopy, nonet + glueball → decuplet with characteristic mixing splitting. The evidence for glueballs is discussed and speculation on what lies beyond for the physics of the 21st Century is given. 36 references.

32014 **(IFVE-OTF—82-203) Average multiplicities in deep inelastic processes and their interpretation.** Kiselev, A.V.; Petrov, V.A. (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Serpukhov. Inst. Fiziki Vysokikh Ehnergij). 1982. 15p. NTIS (US Sales Only), PC A02/MF A01. Order Number DE84701784.

The asymptotic expressions for total, backward and forward multiplicities are found in frameWork of perturbative QCD. The ambiguity in the interpretation of these quantities in terms of fragmentation properties of partons is discussed. It is shown that at modern energies the et evolUtion in deep inelastic process is mainly of nonpertUrbative character. With the increase of a square of final hadron state energy W^2 the main contribution to average multiplicity comes from parton subprocess due to formation of massive quark and gluon jets and their successive fragmentation, as di quark contribution becomes less and less essential. At asymptotically high W^2 the ratio of average multiplicities of particles tends to unity.

32015 **(IFVE-OTF—83-26) Radiative detection of spin 3/2 particles in e^+e^- interactions.** Klimenko, K.G.; Tikhonin, F.F. (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Serpukhov. Inst. Fiziki Vysokikh Ehnergij). 1983. 5p. NTIS (US Sales Only), PC A02/MF A01. Order Number DE84701785.

Cross-section for the process $e^+e^- \rightarrow$ ygsub(3/2)gtidlesub(3/2) has been calculated all the spin projections being taken into account. Photon energy dependence differs greatly from that of process $e^+e^- \rightarrow \gamma\omega\omega$ tidle. In the case of eXistence of spin 3/2 neutral fermions such processes give a good possibility for their signal detection.

32016 **(INIS-mf—8354) Phenomenological Lagrangian functions and pionic decays of the heavy lepton tau.** Kluever, A. (Karlsruhe Univ. (T.H.) (Germany, F.R.). Fakultaet fuer Physik). 12 Dec 1980. 42p. (In German). NTIS (US Sales Only), PC A03/MF A01. Order Number TI84780231.

After a description of the construction of nonlinear realizations of compact groups by means of the example of the three-dimensional realization of the group SU(2)xSU(2) the author constructs a Lagrangian density for the interaction of pions with the tau particle, from which the decay of the tau-particle into one, two, or three pions is calculated. Thereafter an extension of this model is presented, in which by the postulation of gauge invariance a set of vector fields is obtained which can be identified with the rho triplet and the A_1 triplet. The pionic decays of the tau are calculated once more under the assumption of the occurrence of these particles as intermediate states. The obtained results are compared with the experimental situation. (HSI).

32017 **(INIS-mf—8715) Charm and its production in neutrino reactions.** Bosetti, P.C. (Technische Hochschule Aachen (Germany, F.R.). Mathematisch-Naturwissenschaftliche Fakultaet). 19 May 1982. 116p. (In German). NTIS (US Sales Only), PC A06/MF A01. Order Number DE84780225.

The present thesis gives a survey about the status of the studies of charmed particles. First the quark model is explained. Then it is shown how the spectroscopy of hadrons is extended, if one goes on from the three-quark model to the four-quark model. In the third chapter it is explained how from the weak interaction on the existence of the charmed quark can be concluded. Thereafter the evidences of the existence of a fourth quark from the e^+e^- annihilation are descrbed. Here also the detection of the J/psi is discussed which could be interpreted as bound state of a new quark-antiquark system and therefore proved the existence of a new quark. In the fifth chapter the production of charmed particles in neutrino experiments is described. Lepton pair events are discussed which showed that the fourth quark is identical with the theoretically predicted charmed quark. The sixth chapter deals with the direct observation of charmed particles in neutrino reactions and finishes with a determination of the production rate of charmed particles in the framework of the quark-parton model. In the seventh chapter the production of charmed particles in electromagnetic and hadronic interactions is discussed. Thereafter follows in the eight chapter a discussion of the decays of charmed particles. (orig./HSI).

32018 (INIS-mf—8935, pp 103-112) **Confinement forces in backward proton production off nuclei.** Kopeliovich, B.Z.; Niedermayer, F. (Joint Inst. for Nuclear Research, Dubna (USSR)). Aug 1983. NTIS (US Sales Only), PC A99/MF A01. Order Number TI84780275. (CONF-830674—).

From 6. international Balaton topical conference on high energy nuclear physics; Balatonfured, Hungary (6 Jun 1983).

The main unsolved problem of quantum chromodynamics is the problem of color confinement. A new mechanism based on ideas of color confinement is proposed for backward proton production off nuclei. (author).

32019 **(JINR—E-2-83-177) $\pi\pi$-scattering lengths.** Volkov, M.K.; Osipov, A.A. (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Nuclear Problems). 1983. 6p. NTIS (US Sales Only), PC A02/MF A01. Order Number DE84701786.

The a_0^0, a_0^2, a_1^1, a_2^0, a_2^2, and a_3^1 $\pi\pi$ scattering lengths are calculated in the framework of the composite meson model which is based on four-quark interactions. The decay form factors of rho $\rightarrow 2\pi$ and epsilon $\rightarrow 2\pi$ are used. The q^2-terms of the quark box diagrams are taken into account. The values for a_2^0 and a_2^2 are close to each other. The a_0^0 and a_1^1 scattering lengths differ from Weinberg theoretical estimations. The a_0^2 scattering length corresponds to Weinberg data.

32020 **(JINR—R-2-83-490) πK-scattering lengths.** Volkov, M.K.; Osipov, A.A. (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Theoretical Physics; Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Nuclear Problems). 1983. 6p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. Order Number DE84701787.

The msub(π)asub(0)sup(1/2)=0.1, msub(π)asub(0)sup(3/2)=-0.1, msub(π)asub(0)sup((-))=0.07, msub(π)sup(3)asub(1)sup(1/2)=0.018, msub(π)sup(3)asub(1)aup(3/2)=0.002, msub(π)sup(3)asub(1)sup((-))=0.0044, msub(π)sup(5)asub(2)sup(1/2)=2.4x10sup(-4) and msub(π)sup(5)asub(2)sup(3/2)=-1.2x10sup(-4) scattering lengths are calculated in the framework of the composite meson model which is based on four-quark interaction. The decay form factors of (rho, epsilon, S*) $\rightarrow 2\pi$, (K tilde, K*) $\rightarrow$ Kπ are used. The q^2-terms of the quark box diagrams are taken into account. It is shown that the q^2-terms of the box diagrams give the main contribution to the s-wave scattering lengths. The diagrams with the intermediate vector mesons begin to play the essential role at calculation of the p- and d-wave scattering lengths.

32021 **(LBL—17688) Electroweak interactions at the SSC: introductory remarks multi W and Z production.** Gaillard, M.K. (Lawrence Berkeley Lab., CA (USA)). Mar 1984. Contract AC03-76SF00098. 13p. (CONF-840275—7). NTIS, PC A02/MF A01; 1; GPO Dep. Order Number DE84011581.

From Workshop on anti pp options for the SSC; Chicago, IL, USA (13 Feb 1984).

Portions are illegible in microfiche products.

This report is a partial summary of the work of the electroweak interaction study group at the Workshop on p anti p Options for the Super Collider, University of Chicago, February 13-17, 1984. Included are general remarks concerning the topics studied and a discussion of multi intermediate vector boson production as a probe of the gauge and scalar sectors of the electroweak theory.

32022 **(RL—83-056) Chiral Lagrangian calculation of nucleon decay modes induced by d = 5 supersymmetric operators.** Chadha, S.; Daniel, M. (Rutherford Appleton Lab., Chilton (UK)). Jun 1983. 11p. NTIS (US Sales Only), PC A02/MF A01. Order Number DE84701797.

We consider the general baryon number violating operators which are produced by dressing the supersymmetric dimension five operators by gaugino exchanges. We then use chiral dynamics to calculate the widths for the decay modes p -> $K^+\nu$-barsub(d), K^0e^+sub(d), and n -> $K^0\nu$-barsub(d). The resulting branching ratios are rather sensitive to the precise admixture of the various baryon number violating operators involved. In particular the decay mode p -> $K^+\nu$-barsub(d) is generally dominant in qualitative agreement with previous quark model results.

32023 **(RL—83-061) Why do we need better measurements of $\sin^2$ theta, rho and gauge boson masses.** Olechowski, M.; Pokorski, S. (Rutherford Appleton Lab., Chilton (UK)). Jun 1983. 6p. (CONF-8305119—4). NTIS (US Sales Only), PC A02/MF A01. Order Number DE84701788.

From 4. Warsaw symposium of elementary particles; Kazimierz, Poland (30 May 1983).

Sensitivity of low energy weak parameters to possible new mass scales is discussed within SU(2) x SU(2) x U(1) models and SO(10) unification. Accuracy better than 0.5% is needed for meaningful tests of the standard model in region up to 1 TeV and of the SU(5) prediction for $\sin^2$ theta.

32024 **(RL—83-073) Aspects of e^+e^- physics.** Saxon, D.H. (Rutherford Appleton Lab., Chilton (UK)). Aug 1983. 43p. (CONF-8309219—1). NTIS (US Sales Only), PC A03/MF A01. Order Number DE84701789.

From International school of elementary particle physics; Kupari, Yugoslavia (18 Sep 1983).

Electron-positron annihilation to fermion pairs is discussed, with emphasis on tests of the properties of the electro-weak current, and searches for new particles. Two photon processes are described, in particular the pointlike coupling of the photon. Results are included up to July 1983.

32025 **(TRI-PP—82-25) Calculation of the conjoined production of Higgs bosons and heavy flavours in p-antip collisions.** Ng, J.N.; Zakarauskas, P. (TRIUMF, Vancouver, British Columbia (Canada)). Jun 1982. 12p. NTIS (US Sales Only), PC A02/MF A01. Order Number DE84701798.

We have performed a Monte-Carlo calculation of semi-inclusive Higgs boson, H^0, production in conjunction with heavy quark flavours in p-antip collisions via quark-antiquark annihilations. The cross section as functions of Higgs mass and heavy quark masses as well as transverse momentum distributions of H^0 are given.

32026 **(TRI-PP—82-30) Neutrinoless double-beta decay in left-right symmetric models.** Picciotto, C.E.; Zahir, M.S. (Victoria Univ., British Columbia (Canada). Dept. of Physics; TRIUMF, Vancouver, British Columbia (Canada)). Jun 1982. 12p. NTIS (US Sales Only), PC A02/MF A01. Order Number DE84701790.

Neutrinoless double-beta decay is calculated via doubly charged Higgs, which occur naturally in left-right symmetric models. We find that the comparison with known half-lives yields values of phenomenological parameters which are compatible with earlier analyses of neutral current data. In particular, we obtain a right-handed gauge-boson mass lower bound of the order of 240 GeV. Using this result and expressions for neutrino masses derived in a parity non-conserving left-right symmetric model, we obtain msub(νsub(e)) < 1.5 eV, msub(νsub(μ)) < 0.05 MeV and msub(νsub(tau)) < 18 MeV.

32027 **(TRI-PP—82-34) Thermal effects on the photon mass.** Woloshyn, R.M. (TRIUMF, Vancouver, British Columbia (Canada)). Sep 1982. 8p. NTIS (US Sales Only), PC A02/MF A01. Order Number DE84701796.

It is shown that processes of O(αGsub(F)) in which the photon interacts indirectly with the thermal neutrino background dominate electric screening at low temperature. The photon electric mass still comes out to be much smaller than the present experimental limit.

32028 **(TRI-PP—82-35) (μp, e^+) conversion with Majoron emission.** Zahir, M.S.; Picciotto, C.E. (TRIUMF, Vancouver, British Columbia (Canada)). Jul 1982. 20p. NTIS (US Sales Only), PC A02/MF A01. Order Number DE84701791.

We study the process of $\mu^- \rightarrow e^+$ in nuclei with the emission of a Majoron with B-L symmetry spontaneously broken by the vacuum expectation value of a Higgs triplet. We find that this mechanism may contribute to the $\mu^- \rightarrow e^+$ conversion rate at the same level as predicted by earlier models.

32029 **(TRI-PP—82-36) μp conversion via doubly charged Higgs scalar.** Picciotto, C.E.; Zahir, M.S. (TRIUMF, Vancouver, British Columbia (Canada)). Oct 1982. 12p. NTIS (US Sales Only), PC A02/MF A01. Order Number DE84701792.

A new mechanism is used to calculate $\mu^- \rightarrow e^+$ conversion in nuclei, based on the existence of a doubly charged Higgs scalar. The scalar is part of a triplet which generates the spontaneous breakdown of B-L symmetry in an extension of the standard model, as proposed by Gelmini and Roncadelli. We find a limit for conversion rates which is comparable to those of earlier calculations.

32030 **(TRI-PP—82-48) Note on the mixings of heavy neutrinos and muon decays.** Kalyniak, P.; Ng, J.N. (TRIUMF, Vancouver, British Columbia (Canada)). Nov 1982. 4p. NTIS (US Sales Only), PC A02/MF A01. Order Number DE84701793.

The authors set limits on the mixing of heavy neutrinos into the muon family /U sub(μi)/sup(2) for neutrino masses in the range of 30 to 70 MeV/c^2. Both the Michel parameter and the e^+ spectrum are used. This complements limits from leptonic decays of pseudoscalar mesons. They also give indications of how current experiments can be used to improve these limits.

32031 **(TRI-PP—82-52) Neutrino charge in the non-linear R sub(xi) gauge.** Monyonko, N.M.; Reid, J.H. (TRIUMF, Vancouver, British Columbia (Canada)). Dec 1982. 4p. NTIS (US Sales Only), PC A02/MF A01. Order Number DE84701794.

We show that the electromagnetic Ward identity for the charged W boson is satisfied in the non-linear R sub(xi) gauge. Consequently the one-loop contributions to the neutrino charge give zero, which they do not in the conventional R sub(xi) gauge.

32032 **(TRI-PP—83-1) Pion pole term in electroproduction of off-mass-shell pions.** McKellar, B.H.; Ellis, R.G. (TRIUMF, Vancouver, British Columbia (Canada)). Jan 1983. 6p. NTIS (US Sales Only), PC A02/MF A01. Order Number DE84701800.

The dependence of the invariant amplitudes for electroproduction of off-mass-shell pions on the pion Born term is investigated when current algebra Ward identities and PCAC are used to determine pion electroproduction invariant amplitudes. The authors show that an amplitude satisfying the Ward identities can be constructed starting from the usual Born terms which do not satisfy them and that this same amplitude will be obtained for a large class of input Born terms.

32033 **(TRI-PP—83-5) Glueball production in the valon-recombination model.** Zahir, M.S. (TRIUMF, Vancouver, British Columbia (Canada)). Nov 1982. 12p. NTIS (US Sales Only), PC A02/MF A01. Order Number DE84701795.

We further investigate the internal structure of a valon and determine the gluon distribution in a manner consistent with the analysis of low-p sub(T) reactions. We then proceed to calculate the possible production of glueballs in the target fragmentation of deep-inelastic νp scattering and discuss how glueball production might influence the rate of 'unfavored' particle productions in the fragmentation of hadrons.

32034 **(UNIGRAZ-UTP—09-83) Low- and medium-energetic K^-p-interaction.** Thaler, J. (Graz Univ. (Austria)). 1983. 46p. NTIS (US Sales Only), PC A03/MF A01. Order Number DE84701774.

In this paper we present results from an analysis of low- and medium-energetic K^-N-scattering data with a separable energy-dependent potential model. The S-waves of the K^-N-system are treated as an inelastic single-channel problem and a form of the potential is used, which is well suited to describe resonant scattering. In this model we calculate Coulomb and mass difference corrections to scattering data and the strong interaction effect in the ground state of kaonic hydrogen. It is argued, that the discrepancy between experimental bound state data and scattering lengths cannot be solved by Coulomb corrections.

32035 **(UWThPh—80-05) Inclusive vector meson production in e^+ e^--annihilation in the weak-electromagnetic interference region.** Bartl, A.; Fraas, H.; Majerotto, W. (Vienna Univ. (Austria)). 1980. 24p. NTIS (US Sales Only), PC A02/MF A01. Order Number DE84701761.

The cross section and density matrix elements for e^+ e^- -> V + x are calculated in the γ-Z^0 interference region. The Feynman-Field model for the quark fragmentation functions is extended to include the spins of the particles. Possibilities for obtaining more specific information about the spin dependence of the fragmentation mechanism and the weak coupling of quarks are discussed.

32036 **Effective weak non-leptonic Hamiltonians for flavour-conserving processes.** Miller, R.D.C.; McKellar, B.H.J. (Melbourne Univ., Australia). *Journal of Physics G: Nuclear Physics;* **10**: No. 1, 11-38(Jan 1984).

The method of decoupling discussed by previous authors is applied to the flavour-conserving non-leptonic weak interaction mediated by W and Z exchange in SU(3)xSU(2)xU(1) to derive an effective Hamiltonian in which the weak bosons and the heavy quarks are decoupled. While the theoretical methods are quite general, numerical results for the effective Hamiltonian are given for a three-quark effective theory with u, d and s quarks active, since this is of interest for weak interactions in nuclear physics. Calculations are performed in the α=O gauge and the ms-bar subtraction scheme.

32037 **Search for proton decay and other rare phenomena.** Goldhaber, M. (Brookhaven National Lab., Upton, NY). *Philosophical Transactions of the Royal Society of London, Series A: Mathematical and Physical Sciences;* **310**: No. 1512, 225-226(20 Dec 1983).

The first results have been obtained with a large water Cherenkov counter located in a salt mine in Ohio. The partial lifetime for the decay $p \rightarrow e^+ \pi^0$ is found to be longer than the value calculated from the minimal SU(5) theory, with the best presently available estimates for the parameters needed. The detector is sensitive to some other potential decay modes, as well as to some rare phenomena that have been discussed in recent years. The characteristics of the penetrating cosmic ray muons and atmospheric neutrino interactions observed are compatible with expectations.

32038 **Neutrino mixing in SO(10).** Milton, K.; Tanaka, K. (Dept. of Physics, Univ. of California, Los Angeles, CA 90024). pp 207-219 of Gauge theories, massive neutrinos, and proton decay. Kursunoglu, B.; Perlmutter, A. New York, NY; Plenum Publishing Corp. (1981). (CONF-810134—). Contract AC02-76ER01545.

From Orbis scientiae conference; Fort Lauderdale, FL, USA (19 Jan 1981).

This chapter examines the question of what kind of neutrino mixing one can expect from a framework in which mass matrix for a single generation of neutrinos is written in a GM-R-S mechanism relating the Dirac mass to the up-quark mass. The large Majorana mass is of the order of 10^{15} GeV, and the eigenvalues are A and -m^2/A. Uses a generalization of the GM-R-S mechanism for 3 neutrinos and allows various mass scales in the righthanded Majorana mass matrix. Discusses alternative mechanisms.

32039 **Flavor-color-hypercolor unification based on SO(10) /SUB V/ x SO(10) /SUB H/ .** Davidson, A.; Mannheim, P.D.; Wali, K.C. (Weizmann Inst. of Science, Rehovot). pp 221-232 of Gauge theories, massive neutrinos, and proton decay. Kursunoglu, B.; Perlmutter, A. New York, NY; Plenum Publishing Corp. (1981). (CONF-810134—). Contract AC02-76ER03533;AC02-79ER10336.

From Orbis scientiae conference; Fort Lauderdale, FL, USA (19 Jan 1981).

This chapter describes a reasonably tight scheme which unifies flavor, color, hypercolor and provides a multigenerational scheme. Discusses general features; the basic structure of the model; a few details (masses for the light or ordinary fermions; constraints from rare decays); and some results. Concludes that while the model presents an elegant solution to the generation problem by incorporating hypercolor and extended hypercolor, there is the need for more than one Higgs mechanism to accomplish the various initial symmetry breakings. Points out that the discrete symmetry which fixes the group structure, the representation of all the fermions and hence the number of generations, has to be broken spontaneously at 10^{15} GeV.

32040 **Magnetic moments of composite fermions.** Lipkin, H.J.; Perlmutter, A. (Fermi National Accelerator Laboratory, Batavia, IL 60510). pp 359-376 of Gauge theories, massive neutrinos, and proton decay. Kursunoglu, B. New York, NY; Plenum Publishing Corp. (1981). (CONF-810134—).

From Orbis scientiae conference; Fort Lauderdale, FL, USA (19 Jan 1981).

This chapter examines the magnetic moments of quarks and leptons. Explains that magnetic moments may provide the clues to choose between symmetry and composite descriptions of the structure of quarks and leptons. Discusses 2 kinds of structures with very different properties, dynamic and static. Summarizes the present status of particle magnetic moments. Points out the difficulties involved in obtaining g-2 in a composite model. A discussion of the electron spectrum requires any composite model describing the electron to be "superrelativistic" with "superconfined" constituents. Notes that such a superrelativistic superconfined system will naturally have the Dirac magnetic moment to a very good approximation.

32041 **"Expected" mixing angles or is there evidence for horizontal symmetries?.** Goldman, T. (Los Alamos National Laboratory, Los Alamos, NM). pp 111-120 of Gauge theories, massive neutrinos, and proton decay. Kursunoglu, B.; Perlmutter, A. New York, NY; Plenum Publishing Corp. (1981). (CONF-810134—).

From Orbis scientiae conference; Fort Lauderdale, FL, USA (19 Jan 1981).

This chapter considers the heresy that generation labels may not be quantum numbers. Uses statistical techniques to develop criteria for unusual generation mixings and mass ratios which would signal the existence of quantum numbers of a horizontal symmetry. Concludes that small fermion mass ratios (between generations) are consistent without the existence of horizontal symmetries; the size of the Cabibbo angle is "normal" and need not be related to horizontal symmetries; the mixing between the second and third generations may be larger than between the first and second; more direct evidence than mass ratios and mixings is necessary to determine the existence of a horizontal symmetry; and large neutrino mixing angles and almost degenerate neutrino masses are not theoretically excluded.

32042 **Mass sum rule for Higgs bosons in arbitrary models.** Langacker, P.; Weldon, H.A. (Department of Physics, University of Pennsylvania, Philadelphia, Pennsylvania 19104). *Physical Review Letters;* **52**: No. 16, 1377-1379(16 Apr 1984). Contract AC02-76ER03071.

A general quartic potential invariant under a group G and containing any number of scalar fields in arbitrary representations is shown to have a mass spectrum at the symmetry-breaking global minimum satisfying Σ/sub A/M^2/sub A/ν^2/sub A/< or =2$\lambda(\Sigma$/sub A/ν^2/sub A/)^2, where v/sub A/ is the vacuum expectation value of the Ath mass eigenfield with any singlet removed. For SU(2) x U(1) with arbitrary Higgs particles this guarantees that the lightest neutral scalar boson will satisfy M/sub min/^{2}< or =$\lambda \sqrt{2}$ / G/sub F/ = λ(350 GeV)^2 where λ is a particular quartic coupling constant.

32043 **Finiteness conditions and gauge-symmetry breakdown in N = 2 supersymmetric models.** Frere, J.; Mezincescu, L.; Yao, Y. (Stanford Linear Accelerator Center, Stanford University, Stanford, California 94305). *Physical Review* [*Section*] *D: Particles and Fields;* **29**: No. 6, 1196-1201(15 Mar 1984). Contract AC03-76SF00515;AC02-76ER01112.

In the framework of N = 2 supersymmetric models, with matter representations chosen to ensure a vanishing β function, we work out the relations between soft N = 1 supersymmetric and/or supersymmetry-breaking terms which preserve finiteness. We show explicitly in an SU(2) example that these very simple conditions are supple enough to allow for a spontaneous symmetry breaking of the gauge group, with a potential bounded from below.

The geometrical approach to gauge theories, based on fiber-bundles, is shown in detail. Several gauge formalisms for gravitation are examined. In particular, it is shown how to build gauge theories for non-semisimple groups. A gravitational theory for the Poincare group, with all the essential characteristics of a Yang-Mills theory is proposed. Inonu-Wigner contractions of gauge theories are introduced, which provide a Lagrangian formalism, equivalent to a Lagrangian de Sitter theory supplemented by weak constraints. Yang and Einstein theories for gravitation become particular cases of a Yang-Mills theory. The classical limit of the proposed formalism leads to the Poisson equation, for the static case.

Zentrum fuer Interdisziplinaere Forschung). 1983. 11p. NTIS (US Sales Only), PC A02/MF A01. Order Number DE84701937.

We prove factoriality in the cyclic component of the vacuum for the energy representation of SU(n)-valued paths groups. The main tool is a lemma concerning generic pairs of Cartan subalgebras in the Lie algebra su(n) of SU(n) groups.

32053 (INIS-mf—8755) **Perturbative QED in terms of gauge invariant fields.** Steinmann, O. (Bielefeld Univ. (Germany, F.R.). Fakultaet fuer Physik). (Bielefeld Univ. (Germany, F.R.). Zentrum fuer Interdisziplinaere Forschung). Oct 1983. 34p. NTIS (US Sales Only), PC A03/MF A01. Order Number DE84780367.

A formulation of QED using only gauge invariant fields acting on a physical state space is discussed. The fields are the electromagnetic tensor. Fsub($\mu\nu$) and a non-local electron field PSIsub(f) depending on a quadrupole [fsup(μ)] of auxiliary functions. The f-ambiguity is physically meaningful: the fsup(μ) contain information on the asymptotic configuration of the electromagnetic field accompanying charged particles. Equations of motion are introduced and solved perturbatively, in the sense that expressions for the Wightman functions of the theory are derived. No information on the commutation relations between the basic fields is needed. (orig.).

32054 (RL—83-060) **Towards a realistic SUGRA-GUT.** Ibanez, L.E.; Ross, G.G. (Rutherford Appleton Lab., Chilton (UK)). Jun 1983. 7p. NTIS (US Sales Only), PC A02/MF A01. Order Number DE84701801.

We construct a grand unified model based on (N = 1 local supersymmetry) x SU(5) in which the only fundamental mass scale is 0(Msub(Planck)). The model predicts sin ^{2}thetasub(W) = 0.22, and has two new scales induced by gravitational effects Msub(x) approx. (Msub(Planck))/(square root (8π)), Msub(SUSY) approx. 10^{11} GeV. SU(2) x U(1) is broken by radiative corrections for a top quark mass in the range 30 < msub(t) < 130 GeV and the colour triplets of Higgs scalars are automatically superheavy.

32055 (UNIGRAZ-UTP—06-83) **More than two static Su(3) charges on the lattice.** Lang, C.B.; Wiltgen, M. (Graz Univ. (Austria)). May 1983. 13p. NTIS (US Sales Only), PC A02/MF A01. Order Number DE84701769.

We study the free energy of ensembles of two and more static charges in SU(3) lattice gauge theory. The results are obtained with Monte-Carlo integration on 6x8x8x8 lattices. Implications for systems with several quarks are discussed.

32056 **Effective-spin model for finite-temperature QCD.** Ogilvie, M. (Department of Physics, Brookhaven National Laboratory, Upton, New York 11973). *Physical Review Letters;* **52**: No. 16, 1369-1372(16 Apr 1984). Contract AC02-76CH00016.

An effective-spin model for finite-temperature QCD is derived by use of a variant of the Migdal-Kadanoff renormalization group. Mean field theory and [for SU(3)] Monte Carlo simulation are applied to the model in order to find the deconfining phase transition. The results are in very good agreement with Monte Carlo simulations of the full theory. Mean field theory predicts that the deconfining transition in pure SU(N) lattice gauge theory is first order for all N> or =3.

32057 **New solutions of Euclidean SU(2) gauge theory.** Khan, I. (International Centre for Theoretical Physics, Trieste, Italy). *Physical Review* [*Section*] *D: Particles and Fields;* **29**: No. 6, 1168-1170(15 Mar 1984). Contract AC02-76CH00016.

New solutions of the Euclidean SU(2) gauge theory having finite field strength everywhere are presented. The solutions are self-dual or antidual and constitute a two-parameter family which includes the instantons.

32058 **Lattice action forms stable under renormalization.** Horn, D.; Zachos, C.K. (Stanford Linear Accelerator Center, Stanford University, Stanford, California 94305). *Physical Review* [*Section*] *D: Particles and Fields;* **29**: No. 6, 1202-1206(15 Mar 1984). Contract W-31-109-ENG-38;AC03-76SF00515.

We review the role of the generalized Gaussian solution to the Migdal-Kadanoff renormalization group for SU(N) lattice gauge theories, and point out that it can be continued down to very low values of the inverse coupling β. We thus explain the long-distance stable line of actions observed in numerical investigations of SU(2), and propose a simple SU(3) mixed action which should exhibit improved scaling behavior.

32059 **(UNIGRAZ-UTP—11-79) High-energy behaviour of scattering phase shifts for Coulomb-like potentials.** Geszetesy, F.; Plessas, W.; Thaller, B. (Graz Univ. (Austria)). Sep 1979. 27p. NTIS (US Sales Only), PC A03/MF A01. Order Number DE84701760.

We discuss the high-energy behaviour of scattering phase shifts for a large class of spherically symmetric Coulomb-like potentials. Some results which have been known only for short-range potentials are extended to this larger class. In particular, by iterating appropriate Volterra integral equations we derive an asymptotic expansion of the phase shifts, which is valid whenever the short-range part of the potential is integrable. When applying our results to the problem of the interference between Coulomb and short-range interactions we obtain an estimate for the high-energy behaviour of the Coulomb-interference effect in the phase shifts.

32061 **(DOE/CH/00016—T3) Fermilab research program workbook.** Rubinstein, R. (Fermi National Accelerator Lab., Batavia, IL (USA)). May 1983. Contract AC02-76CH00016. 126p. NTIS, PC A07/MF A01; 1; GPO Dep. Order Number DE84012568.

Portions are illegible in microfiche products.

The Fermilab Research Program Workbook has been produced annually for the past several years, with the original motivation of assisting the Physics Advisory Committee in its yearly program review conducted during its summer meeting. While this is still the primary goal, the Workbook is increasingly used by others needing information on the current status of Fermilab experiments, properties of beams, and short summaries of approved experiments. At the present time, considerable changes are taking place in the facilities at Fermilab. We have come to the end of the physics program using the 400 GeV Main Ring, which is now relegated to be just an injector for the soon-to-be commissioned Tevatron. In addition, the experimental areas are in the midst of a several-year program of upgrading to 1000 GeV capability. Several new beam lines will be built in the next few years; some indications can be given of their properties, although with the caveat that designs for some are by no means final. Already there is considerable activity leading to experiments studying anti p p collisions at $\sqrt{s} = 2000$ GeV.

32062 **(DOE/NBM—4012509) Argonne National Laboratory 1983-1984.** (Argonne National Lab., IL (USA)). 1984. Contract W-31-109-ENG-38. 35p. NTIS, PC A03/MF A01; GPO Dep. Order Number DE84012509.

This publication presents significant developments at Argonne National Laboratory during 1983-84. Argonne is a multidisciplinary research center with primary focus on nuclear energy, basic research, biomedical-environmental studies and alternate energy research. The laboratory is operated by the University of Chicago for the Department of Energy.

32067 **(INFN/BE—80/4) MARY: a computer code for the analysis of γ-rays following compound inelastic scattering of neutrons in experiments using close neutron source-to-scatterer geometry.** Nardelli, G.; Abbondanno, U.; Demanins, F.; Tuniz, C. (Padua Univ. (Italy); Trieste Univ. (Italy)). 20 May 1980. 44p. NTIS (US Sales Only), MF A01. Order Number DE84901165.

Microfiche only, copy does not permit paper copy reproduction.

The study of γ-rays following neutron inelastic scattering reactions can provide useful information relating to the properties of the residual nucleus. However, the number of nuclei which can be studied is normally limited by the necessity of having high-flux neutron beams and of using samples containing large quantities of scattering material. In the case of enriched isotopes it is often either prohibitively expensive or physically impossible to obtain such large quantities. In order to overcome such difficulties and to carry out experiments with only a few grams of scattering material one may use the small sample method suggested by S.A. Elbakr et al. for the study of the (n,n'γ) reaction and then follow the approach proposed by J.M. Davidson to correct the theoretical γ-ray angular distributions for the effects of the sample-size and of the spread of neutron flux intensities and energies over the angular range subtended by the sample at the neutron source. The computer code (MARY) designed to perform all such corrections for a cylindrical sample positioned so that its symmetry axis and the beam axis are colinear is described. The γ-producing reaction is treated in a statistical compound-nucleus (CN) formalism involving up to as many as 53 extra exit channels. Provision is made, in the program, for mixed gamma multipolarity and for choice among several neutron sources.

(Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow. Inst. Teoreticheskoj i Ehksperimental'noj Fiziki) (and others). Aug 1983. NTIS (US Sales Only), PC A99/MF A01. Order Number TI84780275. (CONF-830674—).

From 6. international Balaton topical conference on high energy nuclear physics; Balatonfured, Hungary (6 Jun 1983).

Systematic investigations of the nuclear reactions in many-nucleon systems at medium energies can be used for testing different theories and to study the quark and relativistic effects in nuclear physics. The interactions of four nucleons are investigated by measuring the elastic and quasi-elastic scattering cross sections of tritium and helium-3 projectiles in hydrogen-filled bubble chamber. The experimental data are compared with the predictions of the eikonal multiple scattering theory. The Glauber sum rules are analyzed. The admixture of six-quark bags in three-nucleon systems are estimated and the derived upper limit was found to be 5%.

32074 (INIS-mf—8935, pp 197-207) **Particle production in α-α and α-p collisions at the CERN ISR.** Szwed, R. (Warsaw Univ. (Poland). Inst. Fizyki Doswiadczalnej). Aug 1983. NTIS (US Sales Only), PC A99/MF A01. Order Number TI84780275. (CONF-830674—).

From 6. international Balaton topical conference on high energy nuclear physics; Balatonfured, Hungary (6 Jun 1983).

Particle production in the α-α and α-p collisions measured by the Split-Field-Magnet detector at the CERN ISR is studied. The inclusive multiplicity and rapidity distributions are presented and compared with p-p data and predictions of various theoretical models. The information on 'temperature' and the cluster size in α-α and α-p collisions is extracted from the data and discussed. (author).

32075 (INIS-mf—8935, pp 565-577) **Hard αp and αα interactions.** Faessler, M.A. (European Organization for Nuclear Research, Geneva (Switzerland)). Aug 1983. NTIS (US Sales Only), PC A99/MF A01. Order Number TI84780275. (CONF-830674—).

From 6. international Balaton topical conference on high energy nuclear physics; Balatonfured, Hungary (6 Jun 1983).

Two special runs with α particles in the CERN ISR allowed to study αp and αα collisions at the highest accelerator cm energies. The inclusive cross section for hadron production in the central rapidity region was measured by four experiments simultaneously, up to transverse momenta of 8 GeV/c. Distributions and correlations of secondaries produced together with the high-psub(T) trigger particle were investigated and compared with corresponding distributions in pp collisions in order to find the mechanism responsible for the 'anomalous nuclear enhancement' of the high-psub(T) hadron yield off nuclei, which was first observed at FNAL some years ago. (author).

32076 **(TRI-PP—82-39) Elastic scattering of polarized protons from ^{3}He at intermediate energies.** Hasell, D.K.; Bracco, A.; Gubler, H.P. (TRIUMF, Vancouver, British Columbia (Canada)). Sep 1982. 4p. (CONF-820828—12). NTIS (US Sales Only), PC A02/MF A01. Order Number DE84701825.

From 9. EPS Nuclear Physics Divisional conference on nuclear structure; Amsterdam, Netherlands (29 Aug 1982).

Using the polarized proton beam facility of the TRIUMF cyclotron, differential cross sections and analyzing powers have been measured in the angular range 20° - 150° c.m. for proton elastic scattering from ^{3}He at incident proton energies of 200, 300, 415 and 515 MeV. The differential cross sections exhibit a minimum at $t = -0.33$ (GeV/c)^2 which becomes more pronounced with increasing energy. There is evidence for the onset of a second minimum corresponding to the interference between double and triple scattering amplitudes. Large analyzing powers are observed at the lower energies. The data from the present analysis, together with data obtained from the literature in the energy range 100-1000 MeV, have been analyzed within the framework of the Glauber multiple scattering formalism. Nucleon-nucleon scattering parameters were taken from a global phase shift analysis of nucleon-nucleon elastic scattering data. Reasonable agreement with the data is obtained.

32077 **(TRI-PP—82-47) Study of two-nucleon wave functions in ^{3}He.** Bracco, A.; Gubler, H.P.; Hasell, D.K. (TRIUMF, Vancouver, British Columbia (Canada)). Nov 1982. 8p. NTIS (US Sales Only), PC A02/MF A01. Order Number DE84701827.

The ^{3}He(p,2p)pn reaction has been studied in a quasi-free scattering arrangement characterized by (anti) p(recoil) = 0 and various excitation or total energies E(recoil) of the unobserved p-n pair. Data were obtained at 250 and 400 MeV at symmetric and asymmetric pairs of angles. The ^{3}He spectral function deduced in the framework of the plane wave impulse approximation is compared to the predictions of Faddeev and variational calculations. Comparisons are also made with p-n relative motion momentum distributions as the overlap between plane waves for the p-n pair and Irving, Irving-Gunn and Khanna wave functions for ^{3}He.

32087 (JINR—E-1-83-487) **Determination of parameters of deuteron six-quark component.** Ableev, V.G.; Dimitrov, Kh.; Filipkowski, A. (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of High Energy). 1983. 2p. NTIS (US Sales Only), PC A02/MF A01. Order Number DE84701826.

Experimental results for the nucleon momentum distributions in deuteron extracted from data for the momentum spectra of protons emitted at zero angles in the relativistic (8.9 GeV/c) deuteron fragmentation on C and CH_2 targets are given. The momentum distributions obtained are well described in the framework of a hybrid model of the deuteron which includes the collective six-quark-state. The parameters are estimated from the fit to experimental data. The analysis of the experimental data on deep inelastic electron (SLAC) and muon (NA4) scattering supports the results.

32088 (JINR—R-1-83-327) **Properties of pC and pTa interactions at Psub(p)=10 GeV/c accompanied by the emission of cumulative protons and π mesons.** Armutli ski, D.; Akhababyan, N.; Baldin, A.M. (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of High Energy). 1983. 11p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. Order Number DE84701695.

In order to study correlative phenomena in the processes of cumulative type general characteristics for pC and pTa interactions are considered at Psub(p)=10 GeV/c accompanied by cumulative proton and π meson emission within the theta > or approximately 135 deg angle range. The comparison with relevant results for all pC and pTa interactions is made. The investigation was performed on the basis of photographs from the two-meter propane chamber. The data on cross sections of the interactions considered, on the dependence of their properties upon the value of cumulative number of the hadron emitted at theta > or approximately 135 deg angle are obtained, the dependences of invariant inclusive production cross sections of these hadrons on their cumulative number are analysed. Within the limits of the statistical accuracy no dependence of the considered characteristics on the value of cumulative number both of protons and mesons has been discovered. Interactions with the cumulative proton are accompanied with the increased proton multiplicity, and those with cumulative π-mesons - with increased multiplicity of π-mesons.

32089 **(JINR—R-1-83-431) Cumulative production of tritium, ^{3}He, ^{4}He nuclei.** Baldin, A.M.; Bondarev, V.K.; Ghiordanescu, N.; Litvinenko, A.G.; Moroz, N.S.; Panebrattsev, Yu.A.; Pentia, M.; Rikhvitskij, S.V.; StaVinskij, V.S.; Khrenov, A.N. (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of High Energy). 1983. 20p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. Order Number DE84701696.

Experimental data on the energy dependence of the tritium ^{3}He and ^{4}He production cross sections at 168 deg and 90 deg emission angle, in proton (8.9 GeV/c) nucleus (Pb, Cu, Al) interactions are obtained. The X-B analysis indicates a scale invariance dependence of the nuclear fragment cross section, where B is a fragment baryon charge and X is a scaling value. The slope parameter has the value <X>=0 0.14-0.15, which is in good agreement with pion and kaon data.

32090 **(TRI-PP—83-3) Further evidence for the EELL effect.** Jennings, B.K.; de Takacsy, N. (TRIUMF, Vancouver, British Columbia (Canada)). Feb 1983. 4p. NTIS (US Sales Only), PC A02/MF A01. Order Number DE84701828.

By looking at the inelastic scattering to the first excited 0^+ state in ^{12}C, it is shown that multiple scattering in the pion-nucleus system is strongly suppressed.

32091 **(TRI-PP—83-7) Energy dependence of the ^{6}Li(π^+,^{3}He)^{3}He reaction at 60, 75 and 90 MeV.** Lolos, G.J.; Johnson, R.R.; Couvert, P.; Mckenna, J.; Myers, R.; Lorraine, P.; Spadinger, I. (TRIUMF, Vancouver, British Columbia (Canada)). Feb 1983. 5p. NTIS (US Sales Only), PC A02/MF A01. Order Number DE84701817.

Differential cross sections for the pionic fission reaction ^{6}Li(π^+,^{3}He)^{3}He at T sub(π) = 60, 75 and 90 MeV have been measured for theta sub(c.m.) = 41 degrees. The energy dependence of the differential cross section is found to follow an exponential decrease with increasing incident pion energy and is compared with existing theoretical predictions.

32092 **Polarized neutron capture into ^{13}C: Evidence for a secondary doorway state effect.** Woodworth, J.G.; August, R.A.; Roberson, N.R.; Tilley, D.R.; Weller, H.R.; Jury, J.W. (University of California, Lawrence Livermore National Laboratory, Livermore, California 94550). *Physical Review* [*Section*] *C: Nuclear Physics;* **29**: No. 4, 1186-1193(Apr 1984).

Angular distributions for the ^{12}C(n,γ_0)^{13}C reaction have been measured with neutrons corresponding to excitation energies of 16.0, 19.2, 20.1, 20.8, and 21.8 MeV. Legendre polynomial coefficients have been determined to second order (a_3 is small). Polarized neutron measurements were obtained at excitation energies of 16.0, 18.6, 19.2, 20.1, 21.0, 21.8, and 22.3 MeV. A structure seen in the coefficient of the Legendre polynomial P_2 for the ^{12}C(p, γ_0)^{13}N reaction is also seen in the present data. A secondary doorway state at 20.5 MeV with an apparent width of 0.5 MeV is suggested by previously measured ^{11}B(d,γ_0)^{13}C data. The presence of this state provides an explanation for the energy dependence of the cross section, the a_2 coefficient, and the analyzing power coefficient b_2 in the ^{12}C(n,γ_0)^{13}C data. The same model is also able to describe the energy dependence of the cross section and the a_2 coefficient observed in the ^{12}C(p,γ_0)^{13}N reaction in the region of 16 to 22 MeV.

32093 **Resonant alpha capture by ^{7}Be and ^{7}Li.** Hardie, G.; Filippone, B.W.; Elwyn, A.J.; Wiescher, M.; Segel, R.E. (Physics Department, Western Michigan University, Kalamazoo, Michigan 49008). *Physical Review* [*Section*] *C: Nuclear Physics;* **29**: No. 4, 1199-1206(Apr 1984). Contract W-31-109-ENG-38.

Resonances at E/sub α/ = 401, 814, and 953 keV were observed in the ^{7}Li(α,γ) reaction. From the thick target yields the corresponding states in ^{11}B at 8920, 9185, and 9274 keV were found to have center-of-mass resonance strengths of 0.0088 +- 0.0014, 0.317 +- 0.047, and 1.72 +- 0.17 eV, respectively. The radiative widths deduced for the latter two states are 0.17/sub -0.03// sup +0.06/ and 1.15 +- 0.16 eV, respectively. Using a 40 mCi ^{7}Be target, α-capture resonances were observed at E/sub α/ = 884 (^{11}C(= 8105 keV) and 1376 (^{11}C(= 8421 keV) keV with center-of-mass resonance strengths of 0.331 +- 0.041 and 3.80 +- 0.57 eV, respectively. The radiative widths deduced for these states are 0.350 +- 0.056 and 3.1 +- 1.3 eV, respectively. The observed decay rates are compared with theoretical calculations.

32094 **A0 production from low energy antiproton annihilations in complex nuclei.** Condo, G.T.; Handler, T.; Cohn, H.O. (Department of Physics, University of Tennessee, Knoxville, Tennessee 37996). *Physical Review* [*Section*] *C: Nuclear Physics;* **29**: No. 4, 1531-1533(Apr 1984).

Low energy antiproton absorptions in complex nuclei were found to produce Λ^0 hyperons with a frequency of 1.9 +- 0.4%.

32095 **Large Pauli-blocking and virtual channel effects in proton radiative capture.** Ludeking, L.D.; Cotanch, S.R. (Department of Physics, North Carolina State University, Raleigh, North Carolina 27650). *Physical Review* [*Section*] *C: Nuclear Physics;* **29**: No. 4, 1546-1548(Apr 1984).

The photonuclear reaction ^{11}B(p,γ_0) ^{12}C is analyzed within a coupled-channels framework based on a continuum shell model formulation. The microscopic description includes realistic shell model density amplitudes, Pauli-blocking effects, and a large number of nucleon + target open and closed (virtual) channels. Both Pauli corrections and virtual channel contributions are found to be sizable for energies spanning the giant dipole resonance and improved, but not detailed, agreement is obtained with experiment. The sensitivity of the theoretical E1 cross section to model interactions is documented and discussed.

32096 **Time-dependent Hartree-Fock picture of nuclear molecular resonances.** Strayer, M.R.; Cusson, R.Y.; Umar, A.S.; Reinhard, P.G.; Bromley, D.A.; Greiner, W. (Yale Univ., New Haven, CT). *Physics Letters,* [*Section*] *B;* **135**: No. 4, 261-265(9 Feb 1984).

The time-dependent Hartree-Fock method is used to calculate isovector dipole and isoscalar quadrupole and octupole molecular resonances for ^{16}O.

32099 **(LBL—17720) Study of beta-delayed two-proton emission in ^{22}Al and ^{26}P and search for new emitters.** Cable, M.D.; Honkanen, J.; Schloemer, E.C.; Ahmed, M.; Reiff, J.E.; Zhou, Z.Y.; Cerny, J. (Lawrence Berkeley Lab., CA (USA)). Apr 1984. Contract AC03-76SF00098. 20p. (CONF-8403127—1). NTIS, PC A02/MF A01; 1; GPO Dep. Order Number DE84012255.

From 5. Nordic meeting on nuclear physics; Jyvaskyla, Finland (12 Mar 1984).

Portions are illegible in microfiche products.

As predicted by Gol'danskii, nuclei far from stability may decay via the unusual manner of ^{2}He (or 'diproton') emission. The diproton corresponds to a coupling of two protons in a virtual $^{1}S_{0}$ state which subsequently decays to two unbound protons. This ^{2}He nucleus has been calculated to have an increased probability of barrier penetration relative to the independent emission of two protons. When the energetics permit ^{2}He emission, two competing modes of two-proton emission are also frequently allowed. These are a sequential proton decay through an intermediate state and the simultaneous emission of two uncoupled protons. Recent studies on ^{22}Al and ^{26}P are described and proposed partial decay schemes are given. (WHK)

32100 (INIS-mf—8935, pp 389-407) **Flow analysis of nuclear collisions - probing the properties of dense nuclear matter.** Buchwald, G.; Graebner, G.; Theis, J.; Maruhn, J.; Greiner, W. (Frankfurt Univ. (Germany, F.R.). Inst. fuer Theoretische Physik); Stoecker, H. (Michigan State Univ., East Lansing (USA). Dept. of Physics and Astronomy). Aug 1983. NTIS (US Sales Only), PC A99/MF A01. Order Number TI84780275. (CONF-830674—).

From 6. international Balaton topical conference on high energy nuclear physics; Balatonfured, Hungary (6 Jun 1983).

Intranuclear cascade calculations and fluid dynamics predictions of the kinetic energy flow are compared for collisions of ^{40}Ca+^{40}Ca and ^{238}U+^{238}U. The aspect ratio, R_{13} obtained from the global analysis has been found to be independent of the bombarding energy for the intranuclear cascade model. Fluid dynamics, on the other hand, predicts a dramatic increase of R_{13} at medium energies of Esub(LAB) approximately 200 MeV/n. The increase depends directly on the pressure, i.e. the nuclear matter equation of state, at high densities. A few nucleon scattering distortions of the flow tensor are analysed. Possible procedures to remove this background from experimental data are discussed. (author).

32101 (INIS-mf—8935, pp 293-298) **Participant-spectator identification in Plastic Ball events using a cluster algorithm.** Aug 1983. NTIS (US Sales Only), PC A99/MF A01. Order Number TI84780275. (CONF-830674—).

From 6. international Balaton topical conference on high energy nuclear physics; Balatonfured, Hungary (6 Jun 1983).

A cluster analysis algorithm has been applied to charged particle exclusive events of the Plastic Ball from Ca+Ca collisions at E/A=400 MeV in order to separate target and projectile spectator fragments from the midrapidity participant region. The efficiency of this analysis has been tested by its application to the results of Cascade model calculations. The accuracy of identifying fragments evaporated from the projectile remnant is 75%. (author).

32102 (INIS-SU—198, pp 56) **Study on the high-energy states of ^{50}Cr by means of the Fe(n, γ) reaction.** Begzhanov, R.B.; Akhrarov, S.M.; Kobilov, O.Sh.; Kulabdullaev, G.A. 1983. (In Russian). NTIS (US Sales Only), PC A99/MF A01. Order Number TI84780104. (CONF-8304144—Summ.).

May 1984. Contract W-7405-ENG-48. 13p. (CONF-840530—2). NTIS, PC A02/MF A01; 1; GPO Dep. Order Number DE84012643.

From International symposium on in-beam nuclear spectroscopy; Debrecen, Hungary (14 May 1984).

Portions are illegible in microfiche products.

Conventional spherical shell model calculations have been undertaken to describe ^{90}Zr and ^{88}Zr. Valence orbitals included the 1f/sub 5/2/, 2p/sub 3/2/, 2p/sub 1/2/, and lg/sub 9/2/ for protons, and lg/sub 9/2/ and 2d/sub 5/2/ for neutrons. For ^{90}Zr, the number of lg/sub 9/2/ protons was $\leqq$ 2. For the high spin even parity states of ^{90}Zr, two calculations were performed, one with $\leqq$ 4 (0) g/sub /9/2/ protons (neutron holes) and one with $\leqq$ 2 (2) g/sub 9/2/ protons (neutron holes). For ^{88}Zr, the number of particles in the g/sub 9/2/ shell was restricted to $\leqq$ 10. For the high spin negative parity states, a calculation was done with up to 11 particles in the g/sub 9/2/ shell. A realistic two-body interaction was employed in this calculation. Predicted excitation energies are compared with experimental results, and for the lower lying positive parity states a comparison of electromagnetic transition rates is also made.

During the last years a large number of experimental papers presenting spectroscopic evidence for collective dipole and octupole deformations have appeared. Many theoretical attempts have been made to explain the observed spectroscopic properties in terms of stable octupole deformations. The coupling by the octupole potential, being proportional to Y_{30}, is strongest for those subshells for which $\Delta l = 3$. Therefore the tendency towards octupole deformation occurs just beyond closed shells where the high-j intruder subshells (N,l,j) lie very close to the normal parity subshells (N-1,l-3,j-3), i.e. for the particle numbers 34 (g/sub 9/2/-p/sub 3/2/), 56 (h/sub 11/2/-d/sub 5/2/). 9C (i/sub 13/2/-f/sub 7/2/) and 134 (j/sub 15/2/-g/sub 9/2/). Empirically, it is specifically for the particle numbers listed above that negative parity states are observed at relatively low energies in doubly even nuclei. From the different combinations of octupole-driving particle numbers four regions of likely candidates for octupole deformed equilibrium shapes emerge, namely the neutron-deficient nuclei with $Z \approx 90$, $N \approx 134$ (light actinides) and $Z \approx 34$, $N \approx 34$ ($A \approx 70$) and the neutron-rich nuclei with Z approx. = 56, $N \approx 90$ (heavy Ba) and $Z \approx 34$, N^{56} ($A \approx 90$). In our calculations we searched for octupole unstable nuclei in these four mass regions. The Strutinsky method with the deformed Woods-Saxon potential was employed. The macroscopic part consists of a finite-range liquid drop energy, where both the surface and Coulomb terms contain a diffuseness correction.

From 6. international Balaton topical conference on high energy nuclear physics; Balatonfured, Hungary (6 Jun 1983).

The Plastic Ball, the first electronic nonmagnetic particle identifying four-pi spectrometer, was used to evaluate complete events of relativistic nuclear collisions. The large multiplicities of events and the electronic data acquisition and processing system gave a very large amount of data. Computer selection and further processing led to reliable evaluated results. In the present paper a part of them, concerning stopping and thermalization in relativistic heavy ion collisions are reported. Some considerations on composite particle and entropy production in connection with a possible phase transition in nuclear matter are described.

32112 (INIS-mf—8935, pp 275-279) **Global analysis of relativistic nuclear collisions detected by the Plastic Ball.** Ritter, H.G.; Gustafsson, H.A.; Gutbrod, H.H. (Gesellschaft fuer Schwerionenforschung m.b.H., Darmstadt (Germany, F.R.); California Univ., Berkeley (USA). Lawrence Berkeley Lab.) (and others). Aug 1983. NTIS (US Sales Only), PC A99/MF A01. Order Number TI84780275. (CONF-830674—).

From 6. international Balaton topical conference on high energy nuclear physics; Balatonfured, Hungary (6 Jun 1983).

Event shapes and emission patterns of high energy nuclear collisions are investigated using data from the electronic four-pi detector Plastic Ball. The sphericity parameter of reaction products, successfully used in particle physics is applied to the study of nuclear collisions. Analysis of sphericity tensors derived from Plastic Ball data does not indicate flow in the symmetric mass 40 system. Rapidity plots show ambiguous results.

Order Number TI84780275. (CONF-830674—).

From 6. international Balaton topical conference on high energy nuclear physics; Balatonfured, Hungary (6 Jun 1983).

Two-particle correlations are investigated using data of relativistic heavy ion reactions measured by the Plastic Ball, the electronic four-pi spectrometer. Two-pion and proton-proton correlations have been measured and interference effects were analyzed. The center-of-mass energy of the correlated particle pair was in the order of 0.5 MeV. In the 1-10 MeV center-of-mass energy range the nuclear cluster formation was investigated and nuclear composites, unstable isotopes were observed. In the cores of the lightest nuclei the sign of correlation was determined.

32114 (INIS-mf—8935, pp 433-437) **Λ and Ksub(s)sup(o) production in central nucleus-nucleus interactions at 4.5 GeV/c momentum per nucleon.** Aug 1983. NTIS (US Sales Only), PC A99/MF A01. Order Number TI84780275. (CONF-830674—).

From 6. international Balaton topical conference on high energy nuclear physics; Balatonfured, Hungary (6 Jun 1983).

Strange particle production is experimentally investigated in central nucleus-nucleus collisions. The production of strangeness is due to the highly excited states of the nuclear matter. Neutral lambda and K particles are reported in central collisions of C and O projectiles of 4.5 GeV/c/amu with nuclear targets C, Ne, Cu, Zr and Pb. The data are consistent with the results of inelastic He-Li collisions which can be interpreted as a superposition of independent nucleon-nucleon interactions. (D.Gy.).

32123 (JINR—6-83-235) **Low-lying excited states of ^{128}Xe.** Mikha lova, M.M.; Zhelev, Zh.; Kirova, N.; Vylov, Ts.; Novgorodov, A.F. (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Nuclear Problems). 1983. 5p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. Order Number DE84701700.

Conversion-electron and γ-ray spectra from the decay of ^{128}Cs have been measured employing high resolution Ge(Li) and Si(Li)-detectors with various sensitive volumes. Multipolarities of eleven γ-transitions were obtained. Spins and parities determined for the lowest excited states are discussed. On the basis of the calculated parameter of deviation from the symmetry from the Davydov-Chaban mode, for which 20 deg <= γ <= 25 deg is obtained, the conclusion as to the γ-softness of the nucleus under study is drawn.

32124 (JINR—R-1-83-201) **Multiplicity distributions of protons with intermediate energies and of fast charged particles emitted in interactions of π-mesons and protons with atomic nuclei in 1.6-10.5 GeV energy range.** Mulas, E.; Slowinski, B. (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Computing Techniques and Automation). 1983. 8p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. Order Number DE84701694.

Multiplicity distributions of protons with intermediate energy (E > or approximately 30 MeV) and multiplicity distribution of n -isub(s) fast charged particles with β > 0.37, emitted in interactions pXe at 2.34 GeV/c and π^-Xe at 9 GeV/c have been measured. The dependence of average multiplicity < nsub(s) > on the proton multiplicity and beam energy are presented. The obtained data are compared with corresponding results for nuclear cascade calculations and KNO scaling function. It has been pointed out that intranuclear cascade model does not contradict the experimental data and that the KNO formula satisfactorily described nsub(s) multiplicity distribution of relativistic charged particles. The dependence of average multiplicity < nsub(s)(k) > on primary hadron energy suggests that relativistic particles nsub(s) are essentially emitted at the first collision of hadron in the target-nucleus.

From Winter school on fundamental nuclear physics; Trieste, Italy (11 Mar 1984).

Portions are illegible in microfiche products.

Some TDHF applications are addressed that are somewhat subtler than just crashing nuclei together and looking at large chunks of nuclear material. I will also attempt to address some of the technical problems of doing TDHF and also point out some areas where work remains to be done. Topics include promptly emitted particles, large amplitude RPA, and exciting giant resonances in heavy ion collisions. 19 references. (WHK)

32126 **Microscopic look at the nuclear twist.** Schwesinger, B. (Institut fuer Kernphysik, Kernforschungsanlage Juelich, D-5170 Juelich, Federal Republic of Germany and Department of Physics, State University of New York at Stony Brook, Stony Brook, New York 11794). *Physical Review [Section] C: Nuclear Physics;* **29**: No. 4, 1475-1481(Apr 1984). Contract AC02-76ER13001.

For ^{90}Zr and ^{208}Pb a microscopic one-particle-one-hole plus two-particle-two-hole calculation examines fluid dynamical predictions about a collective twist resonance in finite nuclei at E~45A/ sup -1/3/ MeV. A spin flip mode which strongly competes with the twist in experiments is heavily fragmented, thus allowing experimental detection of the twist.

32135 **Long lifetimes through the backbend in ^{168}W.** Dracoulis, G.D.; Sprouse, G.D.; Kistner, O.C.; Rafailovich, M.H. (Department of Physics, State University of New York at Stony Brook, Stony Brook, New York 11794). *Physical Review* [*Section*] *C: Nuclear Physics;* **29**: No. 4, 1576-1579(Apr 1984).

Lifetimes in ^{168}W have been measured using the recoil distance method. The lifetime of the 12^+ yrast state (at the backbend) is 87.4(3.3) ps. The 14^+ yrast state has a lifetime of 38.3(1.5) ps. These unusually long lifetimes make ^{168}W a particularly favorable case for studying the structure in the backbending region. The B(E2) of the $12^+ \rightarrow 10^+$ yrast transition is retarded by a factor of 50 compared with the rotational value. The transition quadrupole moments for the observed yrast and yrare states are used to deduce a yrast-yrare interaction of $10<V<19$ keV, in agreement with cranked shell model calculations.

32136 **^{154}Eu(t, p) reaction: Some new systematics in the N = 90 spherical-deformed transition region.** Lanier, R.G.; Sheline, R.K.; Struble, G.L.; Mann, L.G.; Cizewski, J.A. (California Univ., Livermore). *Nuclear Physics* [*Section*] *A;* **413**: No. 2, 236-246(30 Jan 1984).

A radioactive target of ^{154}Eu(8.3 γ) has been used to study the ^{154}Eu(t,p)^{156}Eu reaction at an incident energy of 17 MeV. The bandhead and one rotational state of the [π 5/2[413]; ν 11/2[505]]sub(K=3-) configuration have been identified in ^{156}Eu. The excitation energy of the 3^- bandhead is determined to be 448 +- 15 keV. The angular distribution of the first excited rotational state is anamolous and may indicate evidence for a strong two-step component in the reaction mechanism. The energy systematics of the Eu-Sm transition region are also investigated. We find that the systematics of $(\hbar/2\pi)/2F$ suggest that at N = 87 the ^{150}Eu [π 5/2[413]; ν 11/2[505]]sub(K=3-) excited configurations has a significantly more stable deformed structure than the corresponding 11/2[505] one-quasiparticle structure in ^{149}Sm.

32139 **(INIS-mf—8739) Study of the reaction mechanisms in the system ^{20}Ne + ^{197}Au at projectile energies between 7.5 and 20 MeV/u.** Egelhaaf, C. (Freie Univ. Berlin (Germany, F.R.). Fachbereich Physik). 22 Dec 1982. 107p. (In German). NTIS (US Sales Only), PC A06/MF A01. Order Number DE84780277.

In the present thesis the system ^{20}Ne + ^{197}Au was studied at projectile energies of 150, 220, 290 and 400 MeV. Energy and angular distributions of the projectile-like fragments, the light particles, and the fission fragments were measured. From the comparison of the fission cross section and the cross section of the projectile-like fragments it turned out that these two contributions supplement mutually to the reaction cross section which was determined by calculations by means of the optical model. Both contributions have to be assigned to mutually independent reaction types. In the second part the measured data are compared with different models (Qgg systematics, models for the optimal Q value, for projectile fragmentation and sequential emission of light particles). Thereby result following results: Evidence for the projectile fragmentation as it was described by Gelbke et al. (1977) couldn't be found, rather the sequential emission of light particles increasing with growing projectile energy.

32140 (INIS-mf—8935, pp 307-310) **Search for flow in the reaction Ar+Pb.** Aug 1983. NTIS (US Sales Only), PC A99/MF A01. Order Number TI84780275. (CONF-830674—).

From 6. international Balaton topical conference on high energy nuclear physics; Balatonfured, Hungary (6 Jun 1983).

The mechanisms of interactions between Ar projectiles and Pb targets were investigated at the Berkeley BEVALAC. All charged particles produced in the collisions were recorded by the Streamer Chamber. The events were triggered by hardware. The observed energy dependence, momentum transfer and angular distribution were compared with the predicitons of intranuclear cascade model. The experimental results, however, contradict to that model and point towards the hydrodynamical flow model but the latter has not been yet comparable with the observed data.

From 23. conference on nuclear spectroscopy and nuclear structure; Moscow, USSR (19 Apr 1983).

32142 **(JINR—1-83-22) Multiplicity distributions of πp mesons produced in light nuclei interaction with tantalum nuclei for momentum interval 2-5 GeV/c per nucleon.** Agakishiev, G.N.; Baatar, Ts.; Gasparyan, A.P.; Grigalashvili, N.S.; Ivanovskaya, I.A.; Kladnitskaya, E.N.; Mekhtiev, R.R.; Cheplakov, A.P. (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of High Energy). 1983. 8p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. Order Number DE84701699.

Multiplicity distributions of π^- mesons produced in inelastic collisions of deuterium, helium and carbon nuclei with tantalum target are presented for momentum interval 2-5 GeV/c per nucleon. Experimental data are obtained by means of 2-metre propane bubble chamber of the Laboratory of High Energies, JINR. In He-Ta interactions at 5.1 GeV/c and in the C-Ta interactions at 4.2 GeV/c distributions are wider than the Poisson one. Dependence of average multiplicity of π^--mesons on the primary energy and atomic weight of the projectile is also presented. In central collisions of nuclei the distributions are close to the Poisson one.

32143 **3291-keV J/sup π/ = (25/2)$^+$ level in ^{205}Tl.** Becker, J.A.; Lanier, R.G.; Mann, L.G.; Struble, G.L.; Maier, K.H.; Ussery, L.E.; Stoeffl, W.; Nail, T.W.; Sheline, R.K.; Cizewski, J.A. . (Lawrence Livermore National Laboratory, Livermore, California 94550). *Physical Review [Section] C: Nuclear Physics;* **29**: No. 4, 1268-1272(Apr 1984).

A J/sup π/ = (25/2)$^+$ isomer in ^{205}Tl has been observed using techniques of in-beam γ-ray spectroscopy and the ^{204}Hg(t,2n)^{205}Tl reaction. The decay scheme firmly establishes the yrast levels: [J/sup π/,E/sub x/ (keV)] (11/2)$^-$, 1484.02; (15/2)$^-$, 2054.57; (17/2)$^-$, 2394.18; (19/2)$^-$, 2551.56; and (25/2)$^+$, 3290.7. A candidate for a 12$^-$ state in ^{204}Tl with the configuration (πh/sub 11/2/ $^{-1}$, νi/sub 13/2/ $^{-1}$) is identified.

32144 **Evaporation decay and associated gamma multiplicity for ^{204}Rn via three fusion channels.** Rohe, R.; DiRienzo, A.; Enge, H.; Salomaa, M.K.; Smith, A.; Schier, W.; Tsoupas, N.; Wegner, H.E. (Massachusetts Institute of Technology, Laboratory for Nuclear Science, Cambridge, Massachusetts 02139). *Physical Review [Section] C: Nuclear Physics;* **29**: No. 4, 1362-1369(Apr 1984).

Near-barrier excitation functions for 2n, 3n, 4n, 5n, 2n1p, 3n1p, and 4n1p evaporation from ^{204}Rn following the fusion of ^{35}Cl+ ^{169}Tm, ^{48}Ti+ ^{156}Gd, and ^{65}Cu+ ^{139}La are compared between reactions and with statistical decay codes. First and second gamma multiplicity moments were obtained for all three systems at 50 MeV excitation energy. General agreement with statistical decay code predictions is found in all cases.

32145 **Inelastic excitation of giant resonances by 400-MeV ^{16}O.** Sjoreen, T.P.; Bertrand, F.E.; Auble, R.L.; Gross, E.E.; Horen, D.J.; Shapira, D.; Wright, D.B. (Oak Ridge National Laboratory, Oak Ridge, Tennessee 37830). *Physical Review [Section] C: Nuclear Physics;* **29**: No. 4, 1370-1376(Apr 1984).

Results are presented for 350- and 400-MeV ^{16}O inelastic scattering from ^{208}Pb and ^{90}Zr. The results show excitation of the giant quadrupole, monopole, and dipole resonances. The cross section and peak to continuum ratio are very large for the giant quadrupole resonance. Measured angular distributions agree with distorted-wave Born approximation calculations which use standard collective model form factors. Structure observed in the ^{16}O spectra corresponding to high excitation energies in ^{208}Pb is shown to arise from projectile pickup reactions.

32146 **(EPRI-NP—3436) Neutron multiplicities of ^{252}Cf and the fissile nuclei. Final report.** Smith, J.R.; Reeder, S.D.; Gehrke, R.J. (EG and G Idaho, Inc., Idaho Falls (USA)). Mar 1984. 226p. EPRI-RRC, Box 50490, Palo Alto, CA 94303. Order Number TI84920322.

The absolute value of anti nu, the average number of fission neutrons emitted per fission event, has been measured for the nuclear standard ^{252}Cf, using the manganese bath technique. The fission rate of the ^{252}Cf source was determined by observing coincindences between neutron and fission events. The neutron yield of the source was measured by use of a cablibrated manganese bath. The value obtained was anti nu = 3.767 +- 0.010 neutrons per fission. In a further study of neutron multiplicities the manganese bath measurements of eta, the average number of fission neutrons produced per neutron absorbed in a fissile nucleus, were reanalyzed using estimates of manganese bath systematic effects consistent with those used in the analysis of the ^{252}Cf anti nu data. Part 3 of the report is a reanalysis of relative eta measurements made with a small manganese bath at a few energy points between 0.06 and 0.026 eV, for the nuclei ^{233}U, ^{235}U, ^{239}Pu and ^{241}Pu. Part 4 describes a corrected analysis of total cross section measurements for ^{241}Pu, in the neutron energy interval 0.0005 to 0.10 eV. 70 references.

32147 **(INDC(IRN)—003/L) Measurement of the ^{235}U/^{238}U fission cross section ratio in the ^{235}U fission neutron spectrum.** Azimi-Garakani, D.; Bagheri-Darbandi, M. (International Atomic Energy Agency, Vienna (Austria). International Nuclear Data Committee). Jun 1983. 9p. NTIS (US Sales Only), PC A02/MF A01. Order Number DE84701829.

Fission cross section ratio of ^{235}U to ^{238}U has been measured in the fast neutron field generated by the ^{235}U fission plate installed on the thermal column of the Tehran Research Reactor (TRR) with a Makrofol solid state nuclear track detector. The experiments were carried out with a set of total six enriched ^{235}U and depleted ^{238}U deposits with different masses and Makrofol films of 0.025mm and 0.060mm thicknesses. The chemically etched tracks were counted by an optical microscope. No significant differences were observed with the thin and the thick films. The results showed that the average fission cross section ratio is 3.83+-0.25.

32148 (INIS-mf—8365, pp 58-61) **Observation of a narrow line in the positron spectra from U + U and U + Th collisions.** Berdermann, E.; Bosch, F.; Clemente, M.; Kienle, P.; Koenig, W.; Kozhuharov, C.; Tsertos, H.; Wagner, W. 1982. From 13. meeting on actinides; Elat, Israel (26 Apr 1983).

32152 **(JINR—R-7-83-91) Short-lived spontaneously fissioning activities produced at the sup(20, 22)Ne ion interaction with ^{249}Bk and ^{249}Cf target nuclei.** Buklaonov, G.V.; Derin, A.G.; Rubinsksya, L.A.; Saga dak, R.N.; Utenkov, V.K.; Shirokovskij, I.V. (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Nuclear Reactions). 1983. 12p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. Order Number DE84701698.

The production of spontaneously fissioning (SF) activities in the interaction of sup(20, 22)Ne ions with ^{249}Bk and ^{249}Cf target nuclei was investigated. The described technique allows one to detect S. F. products with the lifetimes from tens of milliseconds up to several seconds and effective suppression of the long-lived background from the products of the multinucleon transfer reactions. Spontaneous fission activities with Tsub(1/2) approximately 1-3 s and rather large production cross sections (approximately 10^{-32} cm^2) are found to originate from the irradiation of ^{249}Bk, ^{249}Cf targets with sup(20, 22)Ne ions. The analysis of their sources makes it possible to point out ^{252}102 and ^{256}102 nuclides as the most probable in ^{249}Cf+^{22}Ne reaction, ^{253}102 and ^{246}Fm in ^{249}Bk+^{20}Ne reaction and unknown ^{257}Es and ^{260}Md in ^{249}Bk+^{22}Ne reaction. It is shown that in the multinucleon transfer reactions on actinide target nuclei nuclides in a wide range of mass numbers may be produced.

32153 **High-spin consequences of octupole shape in nuclei around ^{222}Th.** Nazarewicz, W.; Olanders, P.; Ragnarsson, I.; Dudek, J.; Leander, G.A. (Department of Mathematical Physics, Lund Institute of Technology, S-2200 07 Lund, Sweden). *Physical Review Letters;* **52**: No. 15, 1272-1275(9 Apr 1984). Contract AC05-76OR00033.

The effect of an octupole component in the intrinsic mean field at high spin is demonstrated by a Woods-Saxon-Bogolyubov cranking calculation. The nature of nuclear rotation becomes nearly collective instead of collective plus single-particle, because octupole couplings with Δl up to 3 "dilute" the high-j shells. Theory is consistent with experimental data on ^{223}Th and could be tested further by studying the properties of rotating quasiparticles in neighboring odd-mass nuclei.

32154 **Nuclear structure of ^{244}Am investigated with the (n,γ) reaction.** von Egidy, T.; Hoff, R.W.; Lougheed, R.W.; White, D.H.; Boerner, H.G.; Schreckenbach, K.; Warner, D.D.; Barreau, G.; Hungerford, P. (Physik-Department, Technische Universitat Muenchen, 8046 Garching, Federal Republic of Germany and Lawrence Livermore National Laboratory, Livermore, California 94550). *Physical Review* [*Section*] *C: Nuclear Physics;* **29**: No. 4, 1243-1267(Apr 1984).

Secondary gamma rays and conversion electrons following the ^{243}Am(n,γ)^{244}Am reaction have been studied with crystal spectrometers and an electron spectrometer, respectively. Primary gamma rays following thermal neutron capture in ^{243}Am have also been measured. A level scheme of ^{244}Am has been constructed containing 67 excited levels. The levels are interpreted in terms of coupled proton and neutron Nilsson configurations. The results are found to be in good agreement with a semiempirical model with which excitation energies in odd-odd nuclei are calculated from those in adjacent nuclei.

32155 **Alpha-decay properties of ^{247}Cf, ^{248}Cf, ^{252}Fm and ^{254}Fm.** Ahmad, I.; Lerner, J.L. (Argonne National Lab., IL). *Nuclear Physics* [*Section*] *A;* **413**: No. 3, 423-431(6 Feb 1984).

Alpha-decay properties of ^{247}Cf, ^{248}Cf, ^{249}Fm and ^{254}Fm were measured using thin mass-separated sources. Alpha spectra were measured with Au-Si surface barrier detectors and a magnetic spectrometer, and these were used to determine energies and intensities of α-groups. The energies and intensities are: 6.296 (95%), 6.238 (5%) in ^{247}Cf decay; 6.258 (80.0%), 6.217 (19.6%), 6.118 (0.4%) in ^{248}Cf decay; 7.039 (84.0%), 6.998 (15.0%), 6.904(0.97%), 6.759 (0.023%) in ^{252}Fm decay; 7.192 (85.0%), 7.150 (14.2%), 7.050 (0.82%), 6.898 (0.0066%) in ^{254}Fm decay. Gamma-ray spectra of mass-separated ^{252}Fm and ^{254}Fm samples were measured with a high-resolution Ge(Li) spectrometer, and the $2^+ \rightarrow 0^+$ and $4^+ \rightarrow 2^+$ transitions were observed in the decays of both nuclei. The half-lives of ^{247}Cf and ^{252}Fm were measured to be 3.11 +- 0.03 h and 25.39 +- 0.04 h, respectively. The α branching ratio α/(α + EC) for ^{247}Cf was found to be (3.5 +- 0.5) x 10^{-2}% and the fission /α ratio was measured to be (2.3 +- 0.2) x 10^{-3}% which corresponds to a fission half-life of 125 +- 8 y.

32156 **Sensitivity of computed uranium-238 self-shielding factors to the choice of the unresolved average resonance parameters.** Munoz-Cobos, J.L.; de Saussure, G.; Perez, R.B. (Oak Ridge National Laboratory, P.O. Box X, Bldg. 6025 Oak Ridge, Tennessee 37830). *Nuclear Science and Engineering;* **81**: No. 1, 55-65(May 1982).

The influence of different representations of the unresolved resonances of ^{238}U on the computed self-shielding factors is examined. It is shown that the evaluated infinitely diluted average capture cross section does not provide sufficient information to determine a unique set of unresolved resonance parameters; different sets of unresolved resonance parameters equally consistent with the evaluated average capture cross section yield significantly different computed self-shielding factors. In the conclusion it is recommended that the resolved resonance description of the evaluated ^{238}U cross sections be extended to higher energies and that thick sample transmission data and self-indication data be used to improve the evaluation of the unresolved resonance region.

32157 **(BARC—1161) Heavy ion elastic scattering code : OPTHI.** Ismail, M.; Divatia, A.S. (Bhabha Atomic Research Centre, Bombay (India)). 1982. 30p. NTIS (US Sales Only), PC A03/MF A01. Order Number DE84701745.

A computer code, OPTHI has been designed to calculate nuclear optical model elastic cross sections for the scattering of heavy ions. The program has been designed to be utilitarian rather than capable of giving an exact description of elastic scattering. Input format is described and the program listing is given.

32158 **(INIS-mf—8347) HFB+nQP-method for the description of the rotational bands of deformed nuclei.** Schlicht, G. (Erlangen-Nuernberg Univ., Erlangen (Germany, F.R.). Naturwissenschaftliche Fakultaet 1 - Mathematik und Physik). 21 Jul 1982. 134p. (In German). NTIS (US Sales Only), PC A07/MF A01. Order Number TI84780232.

The HFB+nQP methods has been developed which is presented in this thesis and studied regarding its quality as approximation procedure. For even-odd nuclei the results of the HFBRC-, the HFB+1QP, and the HFB+3QP method were compared with those of the exact solution. As criteria the energy plots, the K distributions, the <j^{2}sub(p3)> and the <jsub(p)^2>-expectation values were applied. Hereby it has been shown that the HFB+1QP method is the fasted approximation for the particle+rotor model. An underlying backbending, i.e. the breakup of a i13/2 pair, which can occur for J>=21.5 is clearly recognizable both in the energy plots and the K distributions and the <j^{2}sub(p3)>-expectation values. The dependence of the results of the particle+rotor model from the parameters could be examined by the study of the 1QP- and the 2QP-data field. The author was therefore able to fit the three following dysprosium nuclei ^{157}Dy, ^{159}Dy, and ^{161}Dy by the HFB+3QB method. Thereby it has been shown that the parameters of the three nuclei only differ in the moment of inertia and the particle number parameter. (orig./HSI).

The experimental values were reproduced for the odd-even effect for all even-charged nuclei from thorium to californium. Partly the OE-effect was studied in spontaneous fission, partly in neutron induced fission with thermal, 1.9-, and 3.0- MeV neutrons. It was shown that the calculated values depend very strongly from the one-particle model which is assumed in order to calculate the probabilities for pairing excitations. Thereby not only the steepness plays a role with which the one-particle energies cross the Fermi edge, but also the deformation velocity, and finally the remaining time until the scission point. That means that the whole procedure depends extremely from details of the one-particle model. Different one-particle models can be excluded because they contain simply too many crossings and then the OE effect tends to O. (orig./HSI).

32184 **(INIS-mf—8730) Collective mass and zero-point energy in the generator-coordinate method.** Fiolhais, C. (Frankfurt Univ. (Germany, F.R.). Fachbereich Physik). 20 Dec 1982. 113p. (In German). NTIS (US Sales Only), PC A06/MF A01. Order Number DE84780227.

The aim of the present thesis is the study of the collective mass parameters and the zero-point energies in the GCM framework with special regards to the fission process. After the derivation of the collective Schroedinger equation in the framework of the Gaussian overlap approximation the inertia parameters are compared with those of the adiabatic time-dependent Hartree-Fock method. Then the kinetic and the potential zero-point energy occurring in this formulation are studied. Thereafter the practical application of the described formalism is discussed. Then a numerical calculation of the GCM mass parameter and the zero-point energy for the fission process on the base of a two-center shell model with a pairing force in the BCS approximation is presented. (HSI).

32185 **(INIS-mf—8746) Collectivity and statistics in deeply-inelastic heavy-ion collisions.** Spina, M.E. (Heidelberg Univ. (Germany, F.R.). Naturwissenschaftlich-Mathematische Gesamtfakultaet). 1983. 99p. NTIS (US Sales Only), PC A05/MF A01. Order Number DE84780368.

A model is developed to describe the transformation of relative kinetic energy into intrinsic excitation energy in DIC. Energy dissipation is viewed as an indirect process, in which collective vibrational modes are first excited coherently and then damped due to the coupling to the remaining non-collective degrees of freedom. Both collective and intrinsic degrees of freedom are included explicitly, and the coupling between them is treated in a Random Matrix Model. Under certain assumptions it is shown that, in the weak-coupling limit, the collective probability distribution in phase space obeys a Fokker-Plank equation. This transport equation is used to derive equations of motion for the expectation values of some "macroscopic" quantities characterizing the process. Some numerical results are presented and a qualitative comparison with the Copenhagen model is attempted.

From 6. international Balaton topical conference on high energy nuclear physics; Balatonfured, Hungary (6 Jun 1983).

The possible phase transition in nuclear matter is investigated theoretically in the framework of the relativistic field theory. The pion condensed phase at finite temperature and its thermody-

namic properties are described by quantum statistical mechanics. Anisotropics of the pion condensed phase and of the normal nuclear matter are studied. The conditions of equilibrium of these two phases are derived.

From 6. international Balaton topical conference on high energy nuclear physics; Balatonfured, Hungary (6 Jun 1983).

A pion condensate as a layered structure has violent fluctuations with the critical phenomena at the transition being a consequence of the proliferation of line-like defects, just as in smectic A liquid crystals. The dominance of dislocations over disclinations suggests the existence of a new phase, prior to pion condensation, in which there is directional order without a periodic structure. (author).

From 6. international Balaton topical conference on high energy nuclear physics; Balatonfured, Hungary (6 Jun 1983).

For the purpose of studying high-energy heavy-ion collisions self-consistent theory of relativistic nuclear fluid-dynamics coupled to classical meson fields was developed. The essential difference to the conventional fluid dynamic description arises from the nonlinear relation for the effective baryon mass Msup(*). The properties of the resulting equation of state were examined and show a new type of phase transition at high temperatures. Finally, some exploratory three-dimensional calculations are presented. (author).

The production of high baryon density plasmas at 10 GeV/A and low baryon density plasmas at 1 TeV/A via nuclear collisions is discussed. (author).

32195 (INIS-mf—8935, pp 495-511) **Dynamical model of quark gluon plasma formation and disintegration.** Biro, T.S.; Zimanyi, J. (Hungarian Academy of Sciences, Budapest. Central Research Inst. for Physics). Aug 1983. NTIS (US Sales Only), PC A99/MF A01. Order Number TI84780275. (CONF-830674—).

From 6. international Balaton topical conference on high energy nuclear physics; Balatonfured, Hungary (6 Jun 1983).

A dynamic model is proposed to describe the quark gluon plasma formation and rehadronization during the heavy ion reactions. A geometric picture is used to determine the overlap region of colliding hadrons, where quarks and gluons form a non-confined plasma. Conservation laws are used to determine the thermodynamical parameters of the plasma. Formulas of the suggested quarkochemistry describe the evolution and flavor distribution of the fireball. A combinatorical model describes the rehadronization process. The particle composition of the disintegrated fireball is given. The minimal bombarding energy necessary to the formation of the quark gluon plasma is derived. (D.Gy.).

32196 (INIS-mf—8935, pp 513-519) **Evaporation of mesons from quark-gluon plasma by fission of chromoelectric flux tubes.** Glendenning, N.K.; Banerjee, B.; Matsui, T. (California Univ., Berkeley (USA). Lawrence Berkeley Lab.). Aug 1983. NTIS (US Sales Only), PC A99/MF A01. Order Number TI84780275. (CONF-830674—).

From 6. international Balaton topical conference on high energy nuclear physics; Balatonfured, Hungary (6 Jun 1983).

The chromoelectric flux tube model is used to obtain a dynamical description of the evaporation of mesons from a quark-gluon plasma. The radiation pressure is computed to assess whether this process is an important mode for the disassembly of a compressed plasma. A new result for the creation rate of qq pairs in a constant color field is employed. (author).

From 6. international Balaton topical conference on high energy nuclear physics; Balatonfured, Hungary (6 Jun 1983).

The theory of high density hadronic matter as described by OCD is reviewed. The prospects for forming a quark-gluon plasma in ultra-relativistic heavy ion collisions are discussed. (author).

32198 (INIS-mf—8935, pp 541-545) **Soliton bag: dynamics and the quark plasma.** Wilets, L.; Goldflam, R.; Achtzehnter, J.; Bickeboeller, M.; Dethier, J.-L.; Henley, E.M.; Luebeck, G.; Rehr, J.; Schuh, A. (Washington Univ., Seattle (USA). Dept. of Physics). Aug 1983. NTIS (US Sales Only), PC A99/MF A01. Order Number TI84780275. (CONF-830674—).

From 6. international Balaton topical conference on high energy nuclear physics; Balatonfured, Hungary (6 Jun 1983).

The soliton model of the quark-gluon bag is investigated on three levels of approximation. The normal excitation modes of the quarks and of the soliton fields are determined. Their interactions are calculated assuming small amplitudes. This method leads to the derivation of hadron and hadronic resonance spectra. Finally, large scale deformations, such as bag collisions are studied, employing the generator coordinate method. Some considerations on the equation-of-state of the quark plasma and on the nuclear matter - quark matter phase transition are given.

32199 (INIS-mf—8935, pp 557-564) **Liquid-gas phase transition in nuclear matter.** Siemens, P.J. (Texas A and M Univ., College Station (USA). Cyclotron Inst.; Texas A and M Univ., College Station (USA). Dept. of Physics). Aug 1983. NTIS (US Sales Only), PC A99/MF A01. Order Number TI84780275. (CONF-830674—).

From 6. international Balaton topical conference on high energy nuclear physics; Balatonfured, Hungary (6 Jun 1983).

The liquid-gas phase transition of Fermi liquids is investigated. This transition is very important in the structure of neutron stars and in the supernova explosions. The paper shows how laboratory observations using the latest generation of nuclear accelerators can be used to infer the surface tension of the liquid-gas interface in nuclear matter. This property has strong consequences concerning the equation of state of the nuclear matter. Evaluation of fragmentation experimental data leads to reliable parameters of the phase transition.

32200 (INIS-mf—8935, pp 11-16) **Quantum effects in heavy ion collisions process.** Danielewicz, P. (California Univ., Berkeley (USA). Lawrence Berkeley Lab.). Aug 1983. NTIS (US Sales Only), PC A99/MF A01. Order Number TI84780275. (CONF-830674—).

From 6. international Balaton topical conference on high energy nuclear physics; Balatonfured, Hungary (6 Jun 1983).

The motion of a nucleon traversing the nuclear medium is investigated based on the non-equilibrium hydrodynamical model of heavy ion collisions. The kinetic parameters (cross section, free path length, free flight time) are estimated using experimental nuclear data. The Boltzmann-like transport equation of the phenomenon is analyzed and quantum effects are taken into consideration by studying equilibration process in nuclear matter, using the non-equilibrium Green's functions and proper self-energies. The equilibration speeds are compared using the classical Boltzmann equation and its quantum modified version. The energy level shifts of the particles and holes in the nuclear matter are determined.

32201 (INIS-mf—8935, pp 43-46) **Subthreshold pion production in nucleus-nucleus collisions - a co-operative process.** Shyam, R.; Knoll, J. (Gesellschaft fuer Schwerionenforschung m.b.H., Darmstadt (Germany, F.R.)). Aug 1983. NTIS (US Sales Only), PC A99/MF A01. Order Number TI84780275. (CONF-830674—).

From 6. international Balaton topical conference on high energy nuclear physics; Balatonfured, Hungary (6 Jun 1983).

Subthreshold pion production is investigated theoretically in nuclear collision processes where the basic nucleon-nucleon collision can not produce a pion. Possible suggested mechanisms of this process are reviewed and the co-operative character of the phenomenon is emphasized. Predictions of several models are compared with the yields and the shapes of experimental pion spectra. Future importance of microscopic kinematical models is pointed out.

32202 (INIS-mf—8935, pp 47-56) **Subthreshold pion production in nucleus-nucleus collisions.** Jakobsson, B. (Lund Univ. (Sweden)). Aug 1983. NTIS (US Sales Only), PC A99/MF A01. Order Number TI84780275. (CONF-830674—).

From 6. international Balaton topical conference on high energy nuclear physics; Balatonfured, Hungary (6 Jun 1983).

Experiments on pion production in heavy ion reactions far below the energy per nucleon of the free nucleon-nucleon production threshold can be important sources of information about the collective behaviour of nucleons in nuclei. However, it is first necessary to consider the possibility that pions are produced in single nucleon-nucleon collisions with extra energy supply from the Fermi momenta in the colliding nuclei. Recent data, mainly from the CERN synchrocyclotron are presented, which could form the basis for a discussion about the degree of collectivity involved in the subthreshold pion production mechanism. (author).

32203 (INIS-mf—8935, pp 121-126) **Formation of local moving source and energy deposition in hadron-nucleus reactions.** Nakai, K.; Shibata, T.-A.; En'yo, H. (Tokyo Univ. (Japan). Dept. of Physics) (and others). Aug 1983. NTIS (US Sales Only), PC A99/MF A01. Order Number TI84780275. (CONF-830674—).

From 6. international Balaton topical conference on high energy nuclear physics; Balatonfured, Hungary (6 Jun 1983).

In the hadron-nucleus reactions there is a possibility for the formation of a local fireball-like object of high rapidity. This local moving object forms only a part of the target nucleus and, traversing the nuclear medium, it behaves as a source of emitted particles. The experimental study of such local moving sources gives information about the properties of heated and excited hadronic matter. Some results of local moving source experiments (inclusive proton spectra, multiplicities, cross sections) and their interpretation (energy deposition, stopping processes) are summarized. The spatial and temporal structure, size and dynamics of the local moving source are derived.

32204 (INIS-mf—8935, pp 127-132) **Coincidence spectra of backward-forward protons.** Haneishi, Y.; Fujita, T. (Nihon Univ., Tokyo. Dept. of Physics). Aug 1983. NTIS (US Sales Only), PC A99/MF A01. Order Number TI84780275. (CONF-830674—).

From 6. international Balaton topical conference on high energy nuclear physics; Balatonfured, Hungary (6 Jun 1983).

The correlated nucleon model is used to investigate the backward proton production problem of heavy ion reactions. The momentum distribution of nucleons is analyzed carefully and the effects of final state interactions are taken into consideration. The model presented is consistent with the single particle spectra as well as with the coincidence spectra and confirms the high momentum component in Fermi motion which seems to be a global property of nuclei from alpha particles to Ta nuclei.

32205 (INIS-mf—8935, pp 133-139) **Neutron induced inclusive light fragment production at intermediate energies.** Franz, J.; Roessle, E. (Freiburg Univ. (Germany, F.R.). Fakultaet fuer Physik); Eroe, J. (Hungarian Academy of Sciences, Budapest. Central Research Inst. for Physics) (and others). Aug 1983. NTIS (US Sales Only), PC A99/MF A01. Order Number TI84780275. (CONF-830674—).

From 6. international Balaton topical conference on high energy nuclear physics; Balatonfured, Hungary (6 Jun 1983).

The backward proton problem is investigated in inclusive spectra of charged particles emitted from nuclei. The comparison of reactions induced by protons and by neutrons provides a sensible test for different suggested mechanisms explaining the experimental spectra. The results of the experiments performed at the pulsed neutron beam of SIN of continuous energy spectra with a dominant peak around 540 MeV are reported and compared with the results of similar experiments using proton projectiles.

32206 (INIS-mf—8935, pp 165-172) **Deep inelastic nuclear reactions and their features.** Leksin, G.A. (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow. Inst. Teoreticheskoj i Ehksperimental'noj Fiziki). Aug 1983. NTIS (US Sales Only), PC A99/MF A01. Order Number TI84780275. (CONF-830674—).

From 6. international Balaton topical conference on high energy nuclear physics; Balatonfured, Hungary (6 Jun 1983).

The characteristic features of deep inelastic nuclear reactions are summarized. The dependence of cross sections on target mass number is strictly different for the usual reactions taking place in the periphery of nucleus and for the deep inelastic reactions proceeding not on the individual nucleons but deeply within the nuclear volume. Angular and energy dependences, symmetry and scaling properties, isotopic effects and some other features of deep inelastic nuclear reactions are reviewed. The possible important role of quark degrees of freedom in deep inelastic reactions is emphasized.

32207 (INIS-mf—8935, pp 209-216) **Light ion emission from heavy ion induced reactions.** Machner, H. (Kernforschungsanlage Juelich G.m.b.H. (Germany, F.R.). Inst. fuer Kernphysik). Aug 1983. NTIS (US Sales Only), PC A99/MF A01. Order Number TI84780275. (CONF-830674—).

From 6. international Balaton topical conference on high energy nuclear physics; Balatonfured, Hungary (6 Jun 1983).

The mechanism of heavy-ion-induced nuclear reactions is investigated. The exciton model, successfully applied for the description of light-ion-induced reactions is used to heavy-ion-induced processes. Conjectures concerning energy dependence and symmetry properties of the exciton model parameters are checked comparing the measured spectra of emitted light ions with the predictions of the model. (D.Gy.).

32208 (INIS-mf—8935, pp 287-292) **Aspects of data on the breakup of highly excited nuclei.** Gutbrod, H.H. (Gesellschaft fuer Schwerionenforschung m.b.H., Darmstadt (Germany, F.R.)); Warwick, A.I. (California Univ., Berkeley (USA). Lawrence Berkeley Lab.). Aug 1983. NTIS (US Sales Only), PC A99/MF A01. Order Number TI84780275. (CONF-830674—).

From 6. international Balaton topical conference on high energy nuclear physics; Balatonfured, Hungary (6 Jun 1983).

The mechanisms by which nuclear fragments of mass number 4-150 are produced in heavy-ion collisions are reviewed. The available experimental data are summarized and some trends showed by them are emphasized which can be used to validate theoretical models. The evaporation model and its generalizations to higher excitations where the nuclear liquid is transformed to nuclear gas are described. Connections with possible phase transitions in infinite nuclear matter are analyzed. The fireball model and its results are described.

32209 (INIS-mf—8935, pp 311-316) **Multifragmentation of big nuclei.** Gross, D.H.E. (Hahn-Meitner-Institut fuer Kernforschung Berlin G.m.b.H. (Germany, F.R.). Bereich Kern- und Strahlenphysik; Freie Univ. Berlin (Germany, F.R.). Fachbereich Physik). Aug 1983. NTIS (US Sales Only), PC A99/MF A01. Order Number TI84780275. (CONF-830674—).

From 6. international Balaton topical conference on high energy nuclear physics; Balatonfured, Hungary (6 Jun 1983).

Heavy target nuclei split into many fragments when bombarded by protons or heavy ions at very high energies (Esub(p)>10 GeV). A statistical model is presented, which calculates the relative phase-space available for the various multifragment decay channels. It is shown that the Coulomb-interaction between the fragments is crucial. Over the whole fragment-mass region the experimental mass-yield distributions for limiting fragmentation can be reproduced. Further investigations and refinements of the model are needed before a final judgement about the importance of the multifragment phase-space relative to dynamical effects is possible. (author).

32210 (INIS-mf—8935, pp 323-327) **To probe the presence of anomalons by studying characteristics of projectile fragments in heavy ion reactions.** Otterlund, I. (Lund Univ. (Sweden). Dept. of Cosmic and Subatomic Physics); Sherif, M.M. (Cairo Univ. (Egypt). Dept. of Physics). Aug 1983. NTIS (US Sales Only), PC A99/MF A01. Order Number TI84780275. (CONF-830674—).

From 6. international Balaton topical conference on high energy nuclear physics; Balatonfured, Hungary (6 Jun 1983).

The plot of the mean free path vs the distance from the origin for each generation will give a definite answer to test the presence of anomalons nuclei without precise determination for the charge distribution of the secondary fragments. This representation is weakly dependent on the efficiency of the scanner and the sensitivity of the emulsion. (author).

32211 (INIS-mf—8935, pp 329-351) **Experimental review of high-energy nucleus-nucleus collisions.** Nagamiya, S. (Tokyo Univ. (Japan). Dept. of Physics). Aug 1983. NTIS (US Sales Only), PC A99/MF A01. Order Number TI84780275. (CONF-830674—).

From 6. international Balaton topical conference on high energy nuclear physics; Balatonfured, Hungary (6 Jun 1983).

The single-particle inclusive spectra as well as small-angle two-particle correlations, for light particles emitted at large angles, are reviewed. The author's recent data on backward-forward two-particle correlations in proton-nucleus collisions are discussed, in connection with current efforts on high-psub(T) particle detection in nucleus-nucleus collisions. Also the physics of projectile fragments is described. (author).

32212 (INIS-mf—8935, pp 353-361) **Scaling properties of heavy ion reactions in the hydrodynamical model.** Csernai, L.P. (Hungarian Academy of Sciences, Budapest. Central Research Inst. for Physics); Balazs, N. (State Univ. of New York, Stony Brook (USA)); Dietrich, K.; Schuermann, B. (Technische Univ. Muenchen, Garching (Germany, F.R.). Fachbereich Physik). Aug 1983. NTIS (US Sales Only), PC A99/MF A01. Order Number TI84780275. (CONF-830674—).

From 6. international Balaton topical conference on high energy nuclear physics; Balatonfured, Hungary (6 Jun 1983).

The applicability of similarity conditions of the classical non-relativisitic hydrodynamics to the hydrodynamic description of heavy ion reactions is investigated. The similarity parameters of ideal and viscous hydrodynamic equations are defined. The universal functions determining the cross sections depend only on the Strouhal and Reynolds numbers. The method proposed is applicable to comparison of experimental data measured at different masses and energies. Some examples are analysed.

32213 (INIS-mf—8935, pp 363-366) **Non-compensated heat in heavy-ion collisions.** Csernai, L.P.; Lukacs, B. (Hungarian Academy of Sciences, Budapest. Central Research Inst. for Physics). Aug 1983. NTIS (US Sales Only), PC A99/MF A01. Order Number TI84780275. (CONF-830674—).

From 6. international Balaton topical conference on high energy nuclear physics; Balatonfured, Hungary (6 Jun 1983).

The thermodynamics of heavy ion reactions is theoretically investigated. A possible source of entropy production is the hypothetic phase transition (probably transition from the nuclear matter to the quark matter state) occuring in the dense, compressed overlap region of colliding nuclei. Thermodynamical considerations show that only non-equilibrium phase transitions cause entropy production. A simple model concerning the kinetics of the phase transition led to a reliable amount of entropy production.

32214 (INIS-mf—8935, pp 409-422) **Dynamics of relativistic nuclear collisions.** Gudima, K.K.; Toneev, V.D. (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Theoretical Physics). Aug 1983. NTIS (US Sales Only), PC A99/MF A01. Order Number TI84780275. (CONF-830674—).

From 6. international Balaton topical conference on high energy nuclear physics; Balatonfured, Hungary (6 Jun 1983).

On the basis of a microscopic cascade model, the dynamical behaviour of some macroscopic quantities is considered and recent experimental data on the search for collective effects in high-energy heavy-ion collisions are analysed. (author).

32215 (INIS-mf—8935, pp 423-431) **Strange particle production in the heavy-ion collision and the chemical equilibrium.** Gudima, K.K.; Toneev, V.D. (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Theoretical Physics). Aug 1983. NTIS (US Sales Only), PC A99/MF A01. Order Number TI84780275. (CONF-830674—).

From 6. international Balaton topical conference on high energy nuclear physics; Balatonfured, Hungary (6 Jun 1983).

Relative particle yield in the high-energy heavy-ion collisions is described in the framework of the firestreak model by assuming chemical equilibrium. The agreement between theory and experiment is essentially improved allowing for the associated production of strange particles. The model predictions for the strange particle production are in a reasonable agreement with the recent experimental results from Dubna and Berkeley. (author).

32216 (INIS-mf—8935, pp 439-450) **Relativistic heavy ion cascade model.** Remler, E.A. (College of William and Mary, Williamsburg, VA (USA)). Aug 1983. NTIS (US Sales Only), PC A99/MF A01. Order Number TI84780275. (CONF-830674—).

From 6. international Balaton topical conference on high energy nuclear physics; Balatonfured, Hungary (6 Jun 1983).

The cascade models of heavy ion reactions can be calculated by computers but their generalization to the relativistic region is difficult and not unique. A new method for defining a Lorentz invariant cascade model is proposed. The model is based on an oversimplified field theory of interactions between scalar nucleons and pions. The field theory defines the general frame of the cascade model with all covariance properties required. Free parameters included in the field theoretical model are to be fitted at the final form of the cascade model to the observed elementary two-particle reaction data.

32217 (INIS-mf—8935, pp 451-461) **Exclusive observables from a statistical simulation of energetic nuclear collisions.** Fai, G. (Lorand Eoetvoes Univ., Budapest (Hungary). Inst. for Theoretical Physics). Aug 1983. NTIS (US Sales Only), PC A99/MF A01. Order Number TI84780275. (CONF-830674—).

From 6. international Balaton topical conference on high energy nuclear physics; Balatonfured, Hungary (6 Jun 1983).

Exclusive observables are calculated in the framework of a statistical model for medium-energy nuclear collisions. The collision system is divided into a few (participant/spectator) sources, that are assumed to disassemble independently. Sufficiently excited sources

explode into pions, nucleons, and composite, possibly particle unstable, nuclei. The different final states compete according to their microcanonical weight. Less excited sources, and the unstable explosion products, deexcite via light-particle evaporation. The model has been implemented as a Monte Carlo computer code that is sufficiently efficient to permit generation of large event samples. Some illustrative applications are discussed. (author).

32218 (INIS-mf—8935, pp 463-468) **Calculations of meson production for relativistic heavy ion reactions using hadrochemical and cascade models.** Barz, H.W.; Iwe, H. (Zentralinstitut fuer Kernforschung, Rossendorf bei Dresden (German Democratic Republic)); Biro, T.S.; Lukacs, B.; Zimanyi, J. (Hungarian Academy of Sciences, Budapest. Central Research Inst. for Physics). Aug 1983. NTIS (US Sales Only), PC A99/MF A01. Order Number TI84780275. (CONF-830674—).

From 6. international Balaton topical conference on high energy nuclear physics; Balatonfured, Hungary (6 Jun 1983).

The production rates of mesons produced in heavy ion reactions are calculated based on two concurrent theories of nuclear processes occuring during the collision. The hadrochemical model assumes the thermal and chemical equilibrium in the hot, dense core of the compound nucleus or fireball, and explains the production rates via equilibrium processes and hydrodynamical expansion. The cascade model does not assume chemical equilibrium and uses individual collision processes. Predictions of two models concerning pion and kaon production rates are derived and compared with each other and with the experimental data.

32219 (INIS-mf—8935, pp 469-474) **Aspects of light fragment emission in high-energy nucleus-nucleus collisions.** Schuermann, B. (Technische Univ. Muenchen, Garching (Germany, F.R.). Fachbereich Physik). Aug 1983. NTIS (US Sales Only), PC A99/MF A01. Order Number TI84780275. (CONF-830674—).

From 6. international Balaton topical conference on high energy nuclear physics; Balatonfured, Hungary (6 Jun 1983).

The model of transport theory is extended to the inclusion of the formation of composite particles and pions through the final state interactions of the nucleons and delta-resonances in the expansion phase of the hot participant zone. Certain aspects of the obtained inclusive spectra are discussed. (author).

32220 (INIS-mf—8935, pp 481-488) **Production of pions in relativistic nucleus-nucleus collisions.** Malfliet, R. (Rijksuniversiteit Groningen (Netherlands). Kernfysisch Versneller Inst.). Aug 1983. NTIS (US Sales Only), PC A99/MF A01. Order Number TI84780275. (CONF-830674—).

From 6. international Balaton topical conference on high energy nuclear physics; Balatonfured, Hungary (6 Jun 1983).

The pion production rate is investigated theoretically and experimentally in relativistic heavy ion reactions. The two stage model of reaction, including the formation of a hot non-equilibrium region of hadrons and an expansion and breakup stage is analysed. The high cross section and hence the strong absorption of pions are taken into consideration. The possible sources and the multiplicity of pions are investigated. Experimental results are presented concerning the relations of multiplicity and energy, momentum and targent mass or nucleon number.

32221 (INIS-SU—198, pp 424) **Accounting for the contribution of a compound reaction in the presence of channel coupling.** Ezhov, S.N.; Plyu ko, V.A. 1983. (In Russian). NTIS (US Sales Only), PC A99/MF A01. Order Number TI84780104. (CONF-8304144—Summ.).

32222 (INIS-SU—198, pp 407) **Angular correlations in the evaporation processes.** Vydrug-Vlasenko, S.M.; Zavarzin, V.F.; Kun, S.Yu.; Aleshin, V.P. 1983. (In Russian). NTIS (US Sales Only), PC A99/MF A01. Order Number TI84780104. (CONF-8304144—Summ.).

From 23. conference on nuclear spectroscopy and nuclear structure; Moscow, USSR (19 Apr 1983).

32223 (JINR—E-1-83-84) **Application of the Moliere multiple scattering angle-lateral displacement function in Monte-Carlo calculations.** Todorova, G. (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of High Energy). 1983. 8p. NTIS (US Sales Only), PC A02/MF A01. Order Number DE84701820.

A two-dimensional approximation is found for the multiple scattering angle-lateral displacement correlation formula. The formula satisfies two conditions: it is close to the Moliere one (better than 10^{-2}) and suitable for Monte-Carlo calculations. These Monte-Carlo calculations are made for relativistic particles.

32224 (JINR—R-3-83-532) **Psub(1/2) and psub(3/2) components of the neutron strength function.** Samosvat, G.S. (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Neutron Physics). 1983. 5p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. Order Number DE84701821.

A brief review is presented which demonstrates that it is impossible to observe spin-orbital splitting of 3p-maximum of the neutron strength function without the resonance separation over spins. The sterngth functions for p-resonances with different spins $S^1(J)$ are expressed through the strength functions Ssub(1/2)sup(1) and Ssub(3/2)sup(1) for psub(1/2) and psub(3/2) neutrons. The values of Ssub(1/2)sup(1) and Ssub(3/2)sup(1) are obtained from the available experimental data, which are not yet sufficient for a definite conclusion about splitting.

32225 (JINR—R-4-83-110) **Some applications of the evolution method in a coupling constant in nuclear physics.** Khankhasaev, M.Kh. (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Theoretical Physics). 1983. 14p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. Order Number DE84701822.

The review presents a special method for the description of a quantum system based on the law of system evolution in the coupling constant (CCE-method). In a few-body problem this method leads to simple analytical expressions for phases of neutron-deuteron scattering, for the triton binding energy, and so on. In the framework of the CCE-method a unitary iteration procedure for the direct calculation of pion-nucleus scattering is developed. The description of the scattering and of bound states of two particles (either elementary or compound) whose interaction consists of short- and long-range components is given.

32226 (JINR—R-4-83-411) **Soliton type solutions in nuclear hydrodynamics.** Kartavenko, V.G. (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Theoretical Physics). 1983. 15p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. Order Number DE84701823.

Soliton type solutions in nuclear hydrodynamics are investigated. It is shown that equations of nuclear hydrodynamics with the Skyrme forces can be reduced in the quasiclassical limit to the nonlinear Schroedinger equations which can be used for analysing statical and dynamical phenomena of heavy ion reactions. The main features of one-dimensional and spherical symmetirc soliton solutions are analysed, and are shown to describe well the properties of a nuclear density in the ground state. The stability of the soliton solutions is briefly investigated. It is pointed that spherical symmetric nodal isomer states of a nuclear density may exit.

32227 (LA-UR—84-1566) **Dynamics of fission and heavy ion reactions.** Nix, J.R.; Sierk, A.J. (Los Alamos National Lab., NM (USA)). May 1984. Contract W-7405-ENG-36. 16p. (CONF-8405179—1). NTIS, PC A02/MF A01; 1; GPO Dep. Order Number DE84012441.

From International conference on theoretical approaches to heavy ion reaction mechanisms; Paris, France (14 May 1984).

Portions are illegible in microfiche products.

Recent advances in a unified macroscopic-microscopic description of large-amplitude collective nuclear motion such as occurs in fission and heavy ion reactions are discussed. With the goal of finding observable quantities that depend upon the magnitude and mechanism of nuclear dissipation, one-body dissipation and two-body viscosity within the framework of a generalized Fokker-Planck equation for the time dependence of the distribution

function in phase space of collective coordinates and momenta are considered. Proceeding in two separate directions, the generalized Hamilton equations of motion for the first moments of the distribution function with a new shape parametrization and other technical innovations are first solved. This yields the mean translational fission-fragment kinetic energy and mass of a third fragment that sometimes forms between the two end fragments, as well as the energy required for fusion in symmetric heavy-ion reactions and the mass transfer and capture cross section in asymmetric heavy-ion reactions. In a second direction, we specialize to an inverted-oscillator fission barrier and use Kramers' stationary solution to calculate the mean time from the saddle point to scission for a heavy-ion-induced fission reaction for which experimental information is becoming available. 25 references.

32228 **(LA-UR—84-1623) Theoretical aspects of double beta decay.** Haxton, W.C. (Los Alamos National Lab., NM (USA)). 1984. Contract W-7405-ENG-36. 17p. (CONF-8404155—1; CONF-840449—11). NTIS, PC A02/MF A01; GPO Dep. Order Number DE84012449.

From 5. workshop on grand unification; Providence, RI, USA (12 Apr 1984).

Considerable effort has been expended recently in theoretical studies of double beta decay. Much of this work has focussed on the constraints this process places on gauge theories of the weak interaction, in general, and on the neutrino mass matrix, in particular. In addition, interesting nuclear structure questions have arisen in studies of double beta decay matrix elements. After briefly reviewing the theory of double beta decay, some of the progress that has been made in these areas is summarized. 25 references.

32229 **(TRI-PP—82-46) Relative energy variable in covariant nuclear wavefunctions.** Keister, B.D. (TRIUMF, Vancouver, British Columbia (Canada)). Nov 1982. 12p. NTIS (US Sales Only), PC A02/MF A01. Order Number DE84701824.

The roles of the relative time variable and its conjugate, the relative energy, are examined in three model bound states of two scalar nucleons, corresponding to different binding energies and different masses of exchanged scalar mesons. Solutions to the ladder Bethe-Salpeter equation are compared to those of three-dimensional equations in which the relative energy variable is fixed by the form of reduction. These three-dimensional solutions are also used to approximate four-dimensional functions which are compared to the Bethe-Saipeter solutions in the region of the first meson production threshold.

32230 **(UCRL—90807) Basic and heavy ion scattering in time dependent Hartree-Fock Theory.** Weiss, M.S. (Lawrence Livermore National Lab., CA (USA)). 17 May 1984. Contract W-7405-ENG-48. 25p. (CONF-8403126—2). NTIS, PC A02/MF A01; 1; GPO Dep. Order Number DE84012318.

From Winter school on fundamental nuclear physics; Trieste, Italy (11 Mar 1984).

Portions are illegible in microfiche products.

Time Dependent Hartree-Fock theory, TDHF, is the most sophisticated, microscopic approach to nuclear dynamics yet practiced. Although it is far from a description of nature it does allow us to examine multiply interactive many-body systems semi quantum mechanically and to visualize otherwise covert processes. Some of the properties of the TDHF equations are stated leaving the interested reader to one of several excellent review articles for the derivations. Some of the applications to the collision of heavy ions are briefly described. (WHK)

32231 **(UNIGRAZ-UTP—08-83) Off-shell effects in nucleon-deuteron polarization observables.** Zankel, H.; Plessas, W. (Graz Univ. (Austria)). 1983. 31p. NTIS (US Sales Only), PC A03/MF A01. Order Number DE84701773.

A separable representation of the S-wave Paris potential and a phase-shift equivalent Yamaguchi-type potential significantly differing in their off-shell behaviours are used to calculate second-order polarization observables of elastic neutron-deuteron scattering at E/sub D/=10 and 20 MeV. Off-shell effects are found in C/sub y,y/,K/sup/y'/sub/y'/, K/sup x'/sub x'/. They stem from differences in the nuclear interaction in the inner region r < or approximately 1.2 fm. Adding approximate Coulomb-distortion contributions proton-deuteron predictions are obtained. Coulomb effects are not found to be negligible. Comparison with proton-deuteron data tends to prefer the interaction model that contains an intermediate-range repulsion.

32232 **Baryon distribution in relativistic heavy-ion collisions.** Wong, C. (Oak Ridge National Laboratory, Oak Ridge, Tennessee 37830). *Physical Review Letters;* **52**: No. 16, 1393-1396(16 Apr 1984). Contract W-7405-ENG-26.

We estimate the baryon distribution in highly relativistic heavy-ion collisions in order to determine the baryon impurity of the quark-gluon plasma in the central rapidity region. In the energy range of s/sup 1/2//A ~ 30—100 GeV per nucleon, the degree of impurity, which can be improved slightly with increasing bombarding energy, is a few percent in energy density.

32233 **Nuclear (π,p) reaction is consistent with a 2N absorption process.** Girija, V.; Koltun, D.S. (Department of Physics and Astronomy, University of Rochester, Rochester, New York 14627). *Physical Review Letters;* **52**: No. 16, 1397-1400(16 Apr 1984).

We show that the rapidity analysis of (π,p) inclusive data on nuclei measures not only the number of nucleons coherently involved in pion absorption, but also the mean momentum loss due to incoherent multiple scattering. We use a statistical theory to calculate the mean momentum loss, also reproducing the inelastic and absorption cross sections. The (π,p) rapidity data can be reproduced with a 2N absorption mechanism, but not with larger clusters, in contrast to earlier analysis which neglected multiple scattering before absorption.

32234 **Nucleon-nucleon potentials with and without $\Delta(1232)$ degrees of freedom.** Wiringa, R.B.; Smith, R.A.; Ainsworth, T.L. (Physics Division, Argonne National Laboratory, Argonne, Illinois 60439). *Physical Review [Section] C: Nuclear Physics;* **29**: No. 4, 1207-1221(Apr 1984). Contract W-31-109-ENG-38.

We present two new nucleon-nucleon (NN) potentials: a v_{14} model that is a conventional NN potential and a v_{28} model with explicit $\Delta(1232)$ degrees of freedom. The v_{14} model has 14 operator components describing NN channels, while the v_{28} model has 14 additional operators, including 12 transition operators for all possible $\pi N\Delta$ and $\pi\Delta\Delta$ couplings and two central operators for $N\Delta$ and $\Delta\Delta$ channels; the latter are constrained so that the v_{28} model has no additional free parameters for data fitting. The two models give excellent and almost identical fits to deuteron properties and np scattering below 330 MeV. The v_{14} and v_{28} forms are convenient for nuclear structure calculations; when many-body cluster contributions are evaluated the v_{28} model will automatically include much of the effect attributed to many-body forces in conventional models, while the v_{14} model will provide a standard of comparison.

32235 **Momentum-space solution of a bound-state nuclear three-body problem with two charged particles.** Lehman, D.R.; Eskandarian, A.; Gibson, B.F.; Maximon, L.C. (Department of Physics, The George Washington University, Washington, DC 20052). *Physical Review [Section] C: Nuclear Physics;* **29**: No. 4, 1450-1460(Apr 1984).

Momentum-space wave function equations are derived for the three-body system of one neutral and two charged particles where the separable interaction is spin and charge independent. The three-body wave function is decomposed so that the equations for the "pure" nuclear components contain the two-nucleon t matrix, as usual, but the equation for the additional Coulomb component is formulated in terms of the Coulomb potential rather than introducing the Coulomb t matrix. The relationship of these equations to the scattering-amplitude equation of Veselova, in which the Coulomb t matrix appears explicitly, as applied to the same problem by Kok et al., is given. After partial-wave decomposition, the wave function equations are solved numerically with partial waves through $l = 4$ retained. The logarithmic singularity that appears when the Coulomb potential is expressed in momentum space is handled for each l by a subtraction technique originated by Lande. Because of the

symmetry of the problem, only even values of l arise throughout and only the l = 0 and l = 2 partial-wave contributions are required to predict the binding energy (and wave-function components) to four significant figures. An order α (fine-structure constant) approximation (i.e., decoupling the Coulomb wave function component from itself) is made to check its validity. It is shown that this $O(\alpha)$ approximation is equivalent to replacing the Coulomb t matrix by the Coulomb potential in the Veselova equations.

32236 **Reply to "Calculation of the Lorentz-weighted average from high-resolution low-energy neutron scattering data".** Johnson, C.H.; Larson, N.M.; Mahaux, C.; Winters, R.R. (Oak Ridge National Laboratory, Oak Ridge, Tennessee 37830). *Physical Review [Section] C: Nuclear Physics;* **29**: No. 4, 1563-1565(Apr 1984).

We substantiate our previous results on the danger of identifying the energy-average scattering function with the Lorentz-weighted average of a scattering function fitted to the experimental data in a finite energy interval.

32237 **Off-shell and nonlocal effects in proton-nucleus elastic scattering.** Picklesimer, A.; Tandy, P.C.; Thaler, R.M.; Wolfe, D.H. (Department of Physics and Astronomy, University of Maryland, College Park, Maryland 20742 and Los Alamos National Laboratory, Los Alamos, New Mexico 87545). *Physical Review [Section] C: Nuclear Physics;* **29**: No. 4, 1582-1585(Apr 1984).

The influence of off-shell and nonlocal effects in the first-order nonrelativistic microscopic optical potential is investigated for elastic proton scattering above 100 MeV. With the free nucleon-nucleon t matrix taken from the model of Love and Franey, these effects are significant only for scattering angles greater than about 60° and energies below about 300 MeV. The inadequacy of the standard first-order theory for predictions of spin observables at forward scattering angles remains unchanged when these effects are included and the need for higher order processes including medium and relativistic effects is reinforced.

32238 **Structure of alternative supersymmetry schemes in nuclei.** Vallieres, M.; Sun, H.Z.; Feng, D.H.; Gilmore, R.; Casten, R.F. (Drexel Univ., Philadelphia, PA). *Physics Letters, [Section] B;* **135**: No. 5/6, 339-343(16 Feb 1984).

The structural differences of two group chain decompositions for a multi-j IBA supersymmetry applicable to nuclei in an O(6) region are discussed in terms of core polarization, and compared to data for ^{197}Pt. It is shown that the wave functions for the lowest two representations are identical in the two chains. This is interpreted in terms of the concept of stretched configurations and leads to suggested experiments to better distinguish the two alternative supersymmetries. Analogous results for an SU(5) region are briefly outlined.

32239 **(FEI—1289) Heterogeneous effects and influence of an output channel during neutron spectra measurement by the time-of-flight method.** Shapar', A.V.; Dulin, V.A.; Mironovich, Yu.N.; Petrov, V.L.; Noak, K. (Erevanskij Fizicheskij Inst. (USSR)). 1982. 11p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. Order Number DE84701735.

The influence of a heterogeneous structure of a large physical bench assemblies on the results of neutron spectra measurements by the time-of-flight method is considered. Calculation of measuring channel for neutron beam output from the centre of an assembly by the Monte Carlo method is performed. The experience of the time-of-flight method development for neutron spectrometry in fast critical assemblies is described.

32240 **(INIS-mf—8339) Measurement of multi-differential electron distributions of an electron beam in nitrogen.** Leuthold, G. (Technische Univ. Muenchen (Germany, F.R.). Fakultaet fuer Elektrotechnik). 1982. 93p. (In German). NTIS (US Sales Only), PC A05/MF A01. Order Number TI84701915.

Numerical codes for electron transport calculations are very important in the field of microdosimetry and thus in quantitative radiation biology. In this work electron spectra have been measured in the track of 1 KeV electrons travelling in a nitrogen atmosphere for different angles in the energy range 8-1000 eV, using a special measuring apparatus. The comparison of the results with theory (Monte Carlo simulation) is a very suitable tool for the verification of the assumptions and approximations made in numerical electron transport codes.

32241 **(INIS-mf—8344) Examination of the density dependence of the slowing-down cross section of liquid ethane for ^{7}Li-projectiles.** Both, G. (Koeln Univ. (Germany, F.R.). Mathematisch-Naturwissenschaftliche Fakultaet). 17 Jul 1982. 65p. (In German). NTIS (US Sales Only), PC A04/MF A01. Order Number TI84701916.

The density dependence of the slowing-down cross section of ethane molecules in the liquid phase for ^{7}Li-projectiles was measured. The measurement was done at the temperature of ethane at 14°C and -74°C and in the energy range of ^{7}Li-projectiles between 175 and 840 keV.

32242 (INIS-mf—8968, pp 91-97) **New insights into the role of metastable particles in pre-breakdown swarm experiments.** Haydon, S.C. (New England Univ., Armidale (Australia). Dept. of Physics). 1983. NTIS (US Sales Only), PC A12/MF A01. Order Number TI84780269. (CONF-8308112—).

From 3. international Swarm seminar; Innsbruck, Austria (3 Aug 1983).

Swarm phenomena become very complex in gases containing energetic neutral metastable particles. Preliminary observations have stressed the need for more highly time-resolved studies to separate the electron, positive ion and Penning ionization components in the ionization growth. At the same time it is essential to establish the origin and interpretation of the more complex 1/tau vs $1/d^2$ plots associated with the Molnar analysis and indeed to reassess the validity of the Molnar approach itself. The purpose of the present paper is to outline new techniques that have led to further insights into the parameters controlling metastable particle contributions to swarm phenomena. Both the first ionization coefficient α/N and the spacially dependent secondary coefficient ω-bar(d) are evaluated from observations of the spatial growth of ionization between plane-parallel electrodes at constant E/N (electric field/gas density). A quenching parameter $\mu/\alpha = \alpha^{-1}\sqrt{G/Dsub(m)}$, were G and Dsub(m) are the volume destruction and diffusion coefficient respectively for metastable particles, provides a means for comparing observation of ω-bar(d) with theory. Temporal investigation of the ionization growth lead to values of both G and Dsub(m). The validity of Molnar's analysis was tested and the latter applied to observations in highly pure N_2. A new technique has been developed specifically for investigations of the role of metastable particles in swarm experiments. New ionization effects were observed with highly purified samples, they are explained by a sensitive balance between the production and destruction of two metastable particles of the same gas, themselves capable of interacting with each other to yield new sources of free electrons.

32247 (IS-M—467) **Accurate wavelength determination through attenuation dips of strongly reflective crystals.** Staudenmann, J.L.; Chapman, L.D.; Murphy, W.J.; Liedl, G.L. (Ames Lab., IA (USA); Purdue Univ., Lafayette, IN (USA). School of Materials Engineering). 1983. Contract W-7405-ENG-82. 11p. (CONF-830910—13). NTIS, PC A02/MF A01; GPO Dep. Order Number DE84012836.

From 3. national conference on synchrotron radiation instrumentation; Upton, NY, USA (12 Sep 1983).

Accurate wavelength determination has been made possible by using the attenuation dips of a strongly reflecting crystal when it is rocked near a Bragg position. This transmission method has the advantage that it does not need any collimation between the sample and the detector and that it is constantly set in the line of sight; this eliminates errors due to detector misalignment. Consequently, it is more accurate than any standard Bragg measurement because only one rotation is required: that of the crystal. Measurements between .36618 A and 1.6782 A show that attenuation and refraction significantly shift the dip positions in pyrolitic graphite (ZYA). It is concluded that, when these effects are accounted for, any wavelength in the range mentioned above can be determined with an error of $\sim 0.1\%$ or smaller.

32248 (KFKI—1983-74) **Neutron radiography applications at the CRIP's WWR-SM research reactor.** Balasko, M.; Cser, L.; Svab, E.; Zsigmond, Gy. (Hungarian Academy of Sciences, Budapest. Central Research Inst. for Physics). Aug 1983. 20p. (In Hungarian). NTIS (US Sales Only), PC A02/MF A01. Order Number DE84701717.

Neutron radiographic experimental equipment has been constructed at the WWR-SM 4.6 MW research reactor in the Central Research Institute for Physics (CRIP). Scintillation screen (^{6}LiF+ZnS(Ag)) is used for the neutron-to-light conversion and for the storage of the picture polaroid film or high-sensitivity camera is used. In addition to the observation of the static structures the visualization of dynamical events can also be carried out.

32249 (RL—83-055) **Use of vanadium as a scattering standard for pulsed source neutron spectrometers.** Mayers, J. (Rutherford Appleton Lab., Chilton (UK)). Jun 1983. 21p. NTIS (US Sales Only), PC A02/MF A01. Order Number DE84701818.

The Gaussian approximation for multiphonon cross-sections has been used in a calculation of the variation of vanadium cross-sections with incident neutron energy. The results show that vanadium behaves as an elastic scatterer to within a few percent on pulsed neutron spectrometers with incident neutron energies up to 1 eV. There is a calculated anisotropy in the scattering of 8%. It is found that the scattering properties of vanadium at 77K and 293K differ by a maximum of 1% except for neutron energies < 15 meV.

32250 (SAND—84-0570) **Recommendations for a production discrete-ordinates coupled electron-photon transport capability.** Morel, J.E.; Nelson, W.E. (Sandia National Labs., Albuquerque, NM (USA)). May 1984. Contract AC04-76DP00789. 16p. NTIS, PC A02/MF A01; GPO Dep. Order Number DE84012957.

The purpose of this study was to determine if a production capability for discrete-ordinates coupled electron-photon transport calculations should be developed and, if so, to recommend how it should be done. It is concluded that such a capability should be developed. The purpose of this report is to detail reasons for making these conclusions, and further to make specific recommendations regarding the manner in which this dvelopment should be carried out. The discrete ordinates method is a deterministic method originally developed to solve the neutron transport equation. For this purpose, it has proven to be an accurate and efficient technique. In particular, it has proven to be much more efficient than Monte Carlo methods in one spatial dimension. All current production methods for coupled electron-photon transport calculations are based upon the condensed history method developed by Berger. This method is generally quite expensive for problems of interest to the weapons radiation effects community, even when the problems are limited to one spatial dimension. Thus, routine engineering design calculations involving coupled electron-photon transport must often be performed with rather crude and inaccurate methods due to cost constraints. The existence of this global deficiency is the main motivation for developing a discrete-ordinates coupled electron-photon transport capability. It has the potential of being as accurate as Monte Carlo yet efficient enough to be used in routine engineering design calculations.

32251 (ZfI-Mitt—71, pp 57-66) **Characterization of the radiation field and control of the optimal electron beam accelerator operation for industrial processes.** Heger, A.; Dorschner, H.; Schumann, W.; Pleul, D. (Akademie der Wissenschaften der DDR, Leipzig. Zentralinstitut fuer Isotopen- und Strahlenforschung). Jun 1983. NTIS (US Sales Only), PC A16/MF A01. Order Number TI84780373. (CONF-8209165—Exc.).

From 2. working meeting radioisotope application and radiation processing in industry; Leipzig, German D.R. (28 Sep 1982).

The depth dose distribution of electrons in the energy range of 0.1 to 3.0 MeV was investigated. Correlations were derived allowing the optimization of the irradiation process. The spatial dose distributions give indications of the homogeneity and the useful irradiation field.

32252 **Channeling continuum model derivation by method of averaging.** Burns, T.J.; Ellison, J.A. (Sandia National Laboratories, Albuquerque, New Mexico 87185). *Physical Review [Section] B: Condensed Matter;* **29**: No. 5, 2790-2792(1 Mar 1984). Contract AC04-76DP00789.

Derivation of the axial- and planar-channeling continuum models from the perfect-string and perfect-plane model by the Krylov-Bogoliubov method of averaging are discussed. For the first time, error bounds are obtained relating the perfect crystal trajectories to the continuum-model trajectories. Details are presented for the axial case, because this case is easier to treat and the generalization to planes is straightforward.

32253 (CONF-840512—9) **Computational method for realistic estimates of the dose to active marrow.** Eckerman, K.F.; Cristy, M. (Oak Ridge National Lab., TN (USA)). 11 May 1984. Contract AC05-84OR21400. 4p. NTIS, PC A02/MF A01; 1; GPO Dep. Order Number DE84012345.

From 6. congress of the International Radiation Protection Association; Berlin, F.R. Germany (7 May 1984).

Portions are illegible in microfiche products.

Calculation of absorbed dose to active marrow from photon radiation is a complex problem because electronic equilibrium may not exist in the vicinity of soft tissue-bone mineral interfaces.

Snyder et al. recognized the intractable geometry of trabecular bone in their studies of photon transport in the body and formulated marrow dose estimates in a conservative manner. Other investigators have noted that this approach leads to overestimate by factors of 3 or more at low photon energy. In this paper the absorbed dose is formulated in terms of physical and anatomical parameters defining the energy deposition in the marrow space. 17 references, 2 figures, 1 table.

From International symposium on methods of production and measurement of standard sources and solutions; Marianske Lazne, Czechoslovakia (15 May 1979).

Grounds have been presented as well as an order of actions in application of the methods of extrapolation of activity values depending on efficiency of counting in the case of absolute measurements of radioactivity concentration by the coincidence methods and application of the metrological labels technick. Influence has been shown of geometry of distribution of measurement points on the accuracy of determination of the value to be extrapolated. Results have been given of investigations of influence of straggling of counting efficiency on the results of extrapolation and on the value of the random error taking into account inclination of extrapolation curve. Methodology has been presented of determination of statistical weight of points which had been used for plotting of the extrapolation curve. Dependence has been deducted of the random error in measurement of emitter's activity and activity of a label in a summary radiation source. This dependence permits to find optimum conditions for measuring of the emitter's activity in different systems of metrological label-emitter.

32255 (INIS-mf—7782, pp 168-170) **Activity of International Committee on metrology of radionuclides.** Radoszewski, T. 1979. (In Russian). NTIS (US Sales Only), PC A13/MF A01. Order Number TI83780837. (CONF-7905228—).

From International symposium on methods of production and measurement of standard sources and solutions; Marianske Lazne, Czechoslovakia (15 May 1979).

Brief information has been given in the paper on the activity of the International Committee on Metrology of Ra dionuclides (ICRM). Main directions of activity of this Committee as well as problems which 5 working groups of the Committee are dealing with have been pointed out. Cooperative works have been listed which had been carried out up to the present time and organized by the Committee. List has been given of members of the Board of managers of this Committee as well as names of managers of Working groups.

32256 (INIS-mf—8736) **Irradiation planning and dosimetry with πp mesons.** Hoffmann, W. (Wuppertal Univ. (Gesamthochschule) (Germany, F.R.). Fachbereich 8 - Naturwissenschaften 1 - Physik). Nov 1980. 141p. (In German). NTIS (US Sales Only), PC A07/MF A01. Order Number DE84780283.

An analytical program for irradiation planning is presented for the 60-beam π-applicator (Piotron). Using this program, the three-dimensional dose distribution can be calculated for an arbitrary orientation of the patient and arbitrary applicator parameters. To study the influence of inhomogenieties of the human body, the stopping power for π^--mesons has been measured for relevant materials. As a result, the stopping power of heavy particles can be described with a high precision by the Bethe-Bloch equation using an appropriate average of the ionisation potentials. Thus also the range variations due to inhomogenieties can be taken into account by an analytical program. To verify the calculated dose distributions, an experimental method has been developed to measure the three-dimensional π^--dose distributions simultaneously, using CaF_2:Tm thermoluminescence dosemeters. From the analysis of the glow curve the total dose can be determined as well as the mean LET-value, so that the distribution of the biological efficiency can be predicted. A special treatment of the TL-materials opens new possibilities for the application in "in vivo" dosimetry, for the dosimetry of other heavy charged particles and for neutrondosimetry. (orig./HP).

32257 **Beta- and gamma-dose measurements of the Godiva IV Critical Assembly.** Hankins, D.E. (Lawrence Livermore National Lab., CA). *Health Physics;* **46**: No. 3, 561-579(Mar 1984). Contract W-7405-ENG-48.

To aid in the re-evaluation of an exposure that occurred in 1963, information was required on the response of film badges to the beta- and gamma-ray doses from a critical assembly. Of particular interest was the beta spectra from the assembly. The dose rates from the Los Alamos National Laboratory Godiva IV Critical Assembly were measured at numerous distances from the assembly four and 12 days following a burst. Information was obtained on the beta-particle spectra using absorption curve studies. The beta/gamma dose-rate ratio as a function of distance from the assembly was determined. Shielding provided by various metals, gloves and clothing was measured. The beta- and gamma-ray dose measured were copmpared with a film packet used in the past at the Nevada Test Site with two types of current TLD personnel badges. Measurements made with a commercial thin-window ion chamber instrument are compared with the dose rates obtained using other dosimeters.

32258 **Energy absorption in cylinders containing an off-axis linear source.** Salib, S.K.; Anderson, V.E.; Rustgi, A.K. (Eastman Kodak Co., Rochester, NY). *Health Physics;* **46**: No. 3, 581-585(Mar 1984). Contract W-7405-ENG-26.

An analytical model for evaluating the absorption of gamma rays by cylindrical tissue has been developed. This model introduces the case of an off-axis linear source of radiation inside the cylinder. The total energy absorbed by the tissue for different source strength, absorption properties of the tissues, and the aspect ratio of the length of the cylinder to its radius have been evaluated.

32260 **Critical properties of the void percolation problem for spheres.** Elam, W.T.; Kerstein, A.R.; Rehr, J.J. (Naval Research Laboratory, Washington, DC 20375). *Physical Review Letters;* **52**: No. 17, 1516-1519(23 Apr 1984).

The method outlined by Kerstein has been used to simulate percolation of the void region between overlapping, randomly located spheres. The computed threshold is in agreement with the previous result of Kertesz. In addition, three critical exponents are computed and are found to be in agreement with the universality hypothesis. This constitutes the first such evaluation for a three-dimensional nonlattice problem and the first test of universality for a percolation problem with no underlying network defined a priori.

32261 **Shear viscosity of the hard-sphere fluid via nonequilibrium molecular dynamics.** Erpenbeck, J.J. (Los Alamos National Laboratory, Los Alamos, New Mexico 87545). *Physical Review Letters;* **52**: No. 15, 1333-1335(9 Apr 1984).

The shear viscosity eta of the hard-sphere fluid, at volumes of 1.6 and 2 times the closed-packed volume, is computed with use of nonequilibrium molecular dynamics. At high shear rate epsilon-dot we observe a phase transition in which the system undergoes two-dimensional ordering in the plane perpendicular to the flow, accompanied by a sharp decrease in eta. For small epsilon-dot, no evidence is found for the square-root dependence on epsilon-dot reported by previous investigators.

32262 **Linear augmented-Slater-type-orbital method for electronic-structure calculations.** Davenport, J.W. (Department of Physics, Brookhaven National Laboratory, Upton, New York 11973). *Physical Review* [*Section*] *B: Condensed Matter;* **29**: No. 6, 2896-2904(15 Mar 1984). Contract AC02-76CH00016.

The purpose of this paper is to explore the possibility of using augmented Slater-type orbitals (STO) as basis functions for electronic-structure calculations. STO's have a radial dependence given by r/sup n/-1exp(-zetar) and as a result have a number of important advantages. They are localized about sites and have the same asymptotic form as actual atomic orbitals. They are regular at the origin and possess analytic Fourier transforms. The Fourier transform can be manipulated to yield an addition theorem, that is, a reexpansion formula for an STO about another site which is similar to the one used for spherical Bessel functions. Augmenting the STO's with numerical solutions of the Schroedinger equation within touching spheres leads to a small secular matrix since the numerical functions are orthogonal to all the core states and the STO's are only used in the interstitial region. The method has been applied to copper, silver, and palladium using Chodorow-type potentials and accounting for all relativistic effects except spin-orbit coupling. The results on copper are in good agreement with previous calculations and with experiments. The results on Pd and Ag are in better agreement with photoemission experiments than fully self-consistent local-density calculations.

32263 **Self-consistent approximation for muffin-tin models of random substitutional alloys with environmental disorder.** Kaplan, T.; Gray, L.J. (Solid State Division, Oak Ridge National Laboratory, Oak Ridge, Tennessee 37830). *Physical Review* [*Section*] *B: Condensed Matter;* **29**: No. 6, 3684-3686(15 Mar 1984). Contract W-7405-ENG-26.

The self-consistent approximation of Kaplan, Leath, Gray, and Diehl is applied to models for substitutional random alloys with muffin-tin potentials. The particular advantage of this approximation is that, in addition to including cluster scattering, the muffin-tin potentials in the alloy can depend on the occupation of the surrounding sites (i.e., environmental disorder is included).

32264 **Structure factor of a correlated nonuniform fermion gas at small wavelength.** Rasolt, M. (Solid State Division, Oak Ridge National Laboratory, Oak Ridge, Tennessee 37830 and Department of Physics, Harvard University, Cambridge, Massachusetts 02138). *Physical Review* [*Section*] *B: Condensed Matter;* **29**: No. 6, 3703-3704(15 Mar 1984). Contract W-7405-ENG-26.

The structure factor of a nonuniform interacting electron gas is examined at large wave vectors to delineate the difference between lowest- and higher-order perturbation contributions. Implications for the exchange-correlation energy are also discussed.

32265 **(BARC—1194) Linear steady heat transfer analysis by boundary element method.** Kushwaha, H.S.; Kakodkar, A. (Bhabha Atomic Research Centre, Bombay (India)). 1983. 17p. NTIS (US Sales Only), PC A02/MF A01. Order Number DE84701718.

The boundary element method for linear steady heat transfer analysis has been developed. Two types of elements, namely, constant elements and linear elements are described. A mention has been made of the analysis of the problems of a square plate subjected to two constant temperature boundaries and other two being insulated, blunt fin with convection boundary condition, and the steady state temperature distribution in circular segment by using this method.

32266 **(CTOM—46979) Kinematics in special and general relativity.** Woodside, R.W.M. (McMaster Univ., Hamilton, Ontario (Canada)). May 1979. 103p. Canadian Theses on Microfiche Service, National Library of Canada, Ottawa, Canada, K1A 0N4. Order Number TI84701936.

This thesis investigates the problem of motion for extended bodies from the viewpoint of classical field theory, where the classical field is the body's energy-momentum or matter tensor. In special relativity a symmetric and divergence-free matter tensor combined with inertial frames is used to generate a kinematics for extended bodies. In general relativity the author suggests an analogous kinematics and applies it to the simplest non-trivial example of static, spherical stars, looking for special sets of vector fields whose matter currents are conserved. Such a set of ten vector fields defines a special frame, and integrals of the conserved matter currents define ten momenta whcih give the kinematics. Application of de Rham cohomology theory shows that the conserved matter currents for isolated bodies will have mechanical potentials which enable the momenta to be found from flux integrals evaluated in the vacuum region surrounding the body. These potentials contain the full Riemann curvature, allowing a body's general relativistic momenta to be determined by its vacuum graviational field.

32267 **(CTOM—48361) Functorial semantics for quantum logic. Towards a realist interpretation of logical structure in quantum mechanics.** Holdsworth, D.G. (University of Western Ontario, London (Canada)). Sep 1979. 429p. Canadian Theses on Microfiche Service, National Library of Canada, Ottawa, K1A 0N4. Order Number TI84701933.

The author uses category theory to examine a quantum logical interpretation of quantum theory. The central thesis is that logical structure is an objective feature of reality, not merely a feature of representation of reality inherent in particular theories. A nonclassical foundation for mathematics is adopted, one that uses morphisms as its primitives. The author argues that all propositions in a physical theory are theoretical and that observation statements constitute a subclass of theoretical statements. Inferences to micro- and macro-objects are on the same pragmatic and logical level, and defending realism for quantum theory involves providing a new criterion of objectivity that coheres with the general constraints of the theory. The criterion proposed has the consequence that certain structural features of reality are to be considered theoretically determined or objective. These features are closely related to logical structure.

32274 (INIS-mf—8951) Scattering theory for explicitely time-dependent interactions. Perusch, M. (Graz Univ. (Austria)). 1982. 66p. (In German). NTIS (US Sales Only), PC A04/MF A01. Order Number DE84701934.

Multiple ionization of hydrogen atoms has got increased attention in recent years in connection with high-power lasers. Due to the strong external electromagnetic fields, perturbation theory is no longer valid. The expression for the multiple ionization probability contains the projections of the time-dependent Hamilton operators and the Moeller operators. The main point of the present work is a proof of existence and completeness of the Moeller operators. The proof of existence and completeness is given. The final chapter contains a physical interpretation and discussion of the multiple ionization probability.

32275 (INIS-mf—8954) Quantum theory of anharmonic oscillators. Some exact relations between matrix elements and their use for various approximation methods. Yamazaki, K. (Technische Univ., Graz (Austria). Inst. fuer Theoretische Physik und Reaktorphysik; Kyoto Univ. (Japan). Dept. of Physics). (Technische Univ., Graz (Austria)). 1983. 39p. NTIS (US Sales Only), PC A03/MF A01. Order Number DE84701935.

This is an investigation of an anharmonic oscillator characterized by the potential ωsub(o)²/2 g² + lambda'q⁴. By using the equations of motion and the relations obtained by evaluating <i'[H,O]+'j> where O is an arbitrary operator, H is our total Hamiltonian and 'i> and 'j> are exact eigenstates of H, we derive an exact recurrence formula. This formula allows us to express tau-functions with a higher power of the variables through tau-functions with a lower power of the variables and energy eigenvalues. In this way we derive several exact relations, which are, in a sense, generalizations of the virial theorem and sum rules. These exact relations are the central equations of this paper. On the basis of these exact relations we propose our 'nearest neighbour level' (N.N.L.) approximation, which seems to provide a good approximation scheme. We can also use our exact relations to test the validity of various approximation methods, and as an example, we discuss the 'New-Tamm-Dancoff' (N.T.D)-type of approximation in detail.

32276 (INIS-mf—8955) Quantum theory of anharmonic oscillators. A variational and systematic general approximation method. Yamazaki, K. (Technische Univ., Graz (Austria)). 1983. 53p. NTIS (US Sales Only), PC A03/MF A01. Order Number DE84701755.

This is an investigation of the energy levels and wave functions of an anharmonic oscillator characterized by the potential ω²/2 q² + lambda q⁴. As a lowest order approximation an extremely simple formula for energy levels: Esub(i)sup((O)) = (+1/2)1/4(3/αsub(i)+αsub(i)) is derived (i being the quantum number of the energy level), which covers any (lambda,i). αsub(i) is the real positive root of a cubic equation: ysub(i)αsub(i)³+αsub(i)²-1 = O, with ysub(i) = 6lambda(2i²+2i+1)/(2i+1). This formula reproduces the exact energy levels within an error of about 1 % for any (lambda,i) (The worst case is 2 % for i=0, lambda -> infinity). Systematically higher orders of 'our' perturbation theory are developed, which contains the 'usual' perturbation theory for the limiting case of small lambda, but 'our' perturbation theory is valid for any (i,lambda). 'Our' second order perturbation theory reduces the errors of our lowest order results by a factor of about 1/5 in general. Various ranges (large, intermediate, small) of (i, lambda) are investigated and compared with the exact values obtained by the Montroll group. For the case of i=0,1, even 'our' forth order perturbation calculation can be elaborated explicitly, which reduces the error to about 0.01 % for any lambda. For small lambda it gives correct numerical coefficients up to lambda⁴ terms, as it should be.

32277 (INIS-mf—8968, pp 55-60) Diffusion tensor in electron swarm transport. Makabe, T.; Mori, T. (Keio Univ., Yokohama (Japan). Faculty of Science and Technology). 1983. NTIS (US Sales Only), PC A12/MF A01. Order Number TI84780269. (CONF-8308112—).

From 3. international Swarm seminar; Innsbruck, Austria (3 Aug 1983).

Expression for the diffusion tensor of the electron (or light ion) swarm is presented from the higher-order expansion of the velocity distribution in the Boltzmann equation in hydrodynamic stage. Derived diffusion coefficients for the transverse and longitudinal directions include the additional terms representative of the curvature effect under the action of an electric field with the usual two-term expressions. Numerical analysis is given for the electron swarm in model gases having the momentum transfer cross section Qsub(m)(epsilon)=Q₀epsilon sup(beta) (β=0, 1/2, 1) using the present theory. As the result, appreciable degree of discrepancy appears between the transverse diffusion coefficient defined here and the conventional expression with increasing of β in Qsub(m).

32278 (INIS-mf—8968, pp 61-65) Lateral diffusion coefficient and velocity distribution function of electrons under electric field. Ikuta, N. (Tokushima Univ. (Japan). Technical Coll.). 1983. NTIS (US Sales Only), PC A12/MF A01. Order Number TI84780269. (CONF-8308112—).

From 3. international Swarm seminar; Innsbruck, Austria (3 Aug 1983).

Precise Monte-Carlo simulation (MCS) of electron motion has shown that the diffusion coefficient Dsub(v) defined in velocity space does not give exact values of the lateral diffusion coefficient Dsub(T). The cause of the disagreement is considered to be the change of electron energy during free flights, the curving of electron trajectories under the influence of applied electric field. The difference between Dsub(v) and Dsub(T) appears large in cases of the collision frequency largely dependent on electron energy and of large energy loss at the collision. The diffusion coefficient Dsub(v) under zero field and of no energy-loss at the collision agrees accurately with the lateral diffusion coefficient Dsub(T). (Authors).

32279 (JINR—R-5-83-398) Differential identities and topological invariants in the Riemann, Riemann-Cartan geometries and in the spaces of the arbitrary affine connection. Barbashev, B.M.; Leonovich, A.A. (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Theoretical Physics). 1983. 4p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. Order Number DE84701753.

The differential identities in the Riemann, Riemann-Cartan geometries and in the spaces of the arbitrary affine connection are obtained, the gravitation Lagrangians being under consideration with the arbitrary dependence on the curvature tensor. The topological Chern, Pontryagin and the Euler-Poincare's invariants in the spaces of any even dimension are considered.

32280 (LBL—17715) Chemical reaction as a quantum transition. Kresin, V.Z.; Lester, W.A. Jr.; Dupuis, M.; Dateo, C.E. (Lawrence Berkeley Lab., CA (USA)). Mar 1984. Contract AC03-76SF00098. 23p. (CONF-8403124—2). NTIS, PC A02/MF A01; 1; GPO Dep. Order Number DE84011804.

From Sanibel symposia; Palm Coast, FL, USA (1 Mar 1984). Portions are illegible in microfiche products.

In this theory a chemical reaction is treated as a quantum transition from reactants to products. It leads to a Franck-Condon-like factor for the evaluation of product energy distributions. Second quantization representation is used to enable a Hamiltonian for reaction to be defined. A specific adiabatic method is used to

describe the dynamics of nuclear motion. The theory is applied to the reactions: HO + D → OD + H and ClI + D → Cl + ID. Polyatomic photodissociation (cyanogen) can also be treated by a similar formalism.

32281 **(TRI-PP—82-45) Multiple scattering in closely packed systems of arbitrary non-overlapping shapes.** Keister, B.D. (TRIUMF, Vancouver, British Columbia (Canada)). Nov 1982. 12p. NTIS (US Sales Only), PC A02/MF A01. Order Number DE84701754.

It has long been known that the multiple scattering of waves from a system of obstacles of finite extent can be described completely with a knowledge of the on-shell amplitudes of the individual scatterers, provided that the minimally enclosing spheres concentric with the scattering centers do not overlap. In this paper, it is shown that on-shell amplitudes alone suffice for a wider class of scattering configurations, in which the individual scatterers do not overlap, but their geometries do not satisfy the above condition. These extended geometries require a careful treatment of certain partial wave sums. An example is also discussed in which a pair of non-overlapping scatterers requires more than the on-shell amplitudes for a solution.

32282 **(TRI-PP—82-54) Generating function for a class of effective Chew-Mandelstam functions.** Reid, J.H.; Trofimenkoff, N.N. (TRIUMF, Vancouver, British Columbia (Canada)). Dec 1982. 8p. NTIS (US Sales Only), PC A02/MF A01. Order Number DE84701756.

We have obtained the generating function for a class of effective Chew-Mandelstam functions for arbitrary integral angular momentum. From this a closed formula for the Chew-Mandelstam functions themselves is derived in both the simple equal mass case and in the more complicated case of unequal masses.

32283 **(TRI-PP—83-4) Unitary transformations, Weyl's association and the role of canonical transformations.** Balazs, N.L.; Jennings, B.K. (TRIUMF, Vancouver, British Columbia (Canada)). Feb 1983. 8p. NTIS (US Sales Only), PC A02/MF A01. Order Number DE84701757.

Quantum mechanical operators can be associated with functions of p,q through the Weyl or Wigner transform. In this paper we develop alternative associations through the use of unitary transformations, and study the relation between unitary transformations and canonical transformations of the p,q labels.

32284 **(UCRL—90789) Gauge argument for accurate quantization of the Hall conductance.** Laughlin, R.B. (Lawrence Livermore National Lab., CA (USA)). 9 May 1984. Contract W-7405-ENG-48. 9p. (CONF-840284—2). NTIS, PC A02/MF A01; 1; GPO Dep. Order Number DE84012611.

From 3. international winterschool on new developments in solid state physics; Salzubrg, Austria (26 Feb 1984).

Portions are illegible in microfiche products.

A theory of the Ordinary Quantum Hall Effect which identifies the quantum measured in these experiments as the electron charge is reviewed. This concept is important for understanding why the effect is so accurate, and also for understanding why fractionally charged quasiparticles need be invoked to explain the Fractional Quantum Hall Effect. The vehicle for making this identification is a thought experiment which is described in detail. Von Klitzing's original data are reproduced. A current I is forced to flow between the source and drain of a MOSFET subjected to a magnetic field of strength H /sub O/ normal to its surface. Both the voltage drop in the direction of current flow and the Hall voltage observed at low temperature are plotted against Fermi level (gate voltage). Over a range of Fermi levels one sees the voltage drop in the direction of current flow going to zero and the Hall voltage plateauing to a constant current flow going to zero and the Hall voltage plateauing to a constant value. Von Klitzing originally reported that this value obeyed the equation I/V/sub H/ = n e^2/h to one part in a million. More recent measurements by the US Bureau of Standards in collaboration with Bell Laboratories have decreased the error to 10^{-7}. Thus the facts we wish to explain are the following: (1) the system exhibits a zero resistance state; (2) it does this over a range of carrier densities; (3) the Hall conductance is constant over this range; and (4) the constant value of the Hall conductance obeys von Klitzing's equation. The elementary quantum mechanics of this system is described, and the explanation of the effect in terms of quantization of the charge density is given. (WHK)

32285 **(UFRJ-IF—12/82) Bianchi type-I models with conformally invariant scalar field.** Accioly, A.J.; Vaidya, A.N.; Som, M.M. (Rio de Janeiro Univ. (Brazil). Inst. de Fisica). 1982. 11p. NTIS (US Sales Only), PC A02/MF A01. Order Number DE84701764.

The solutions of the Einstein equations with the trace-free energy-momentum tensor of conformally invariant scalar field as source are obtained in a spatially homogeneous anisotropic spacetime. Some interesting features of the solutions are discussed.

32286 **(UNIGRAZ-UTP—10-83) Simple approximation for eigenvalues in quantum theory.** Mitter, H.; Yamazaki, K. (Graz Univ. (Austria)). 1983. 18p. NTIS (US Sales Only), PC A02/MF A01. Order Number DE84701759.

An approximation method for the determination of energy levels in quantum theory is discussed, which starts from a scaled set of eigenstates of a solvable model. It is shown, that the lowest approximation fulfills certain relations, which hold also exactly. The approximation is tested by comparison with numerically computed eigenvalues in several cases. The errors turn out to be moderate in most of these and depend very little on typical coupling constants.

32287 **(UWThPh—80-03) Identification of trivial solutions in supergravity.** Aichelburg, P.C. (Vienna Univ. (Austria)). 1980. 4p. NTIS (US Sales Only), PC A02/MF A01. Order Number DE84701765.

The problem of when a given solution to the supergravity field equations can be transformed to an Einstein vacuum solution by a supersymmetry gauge transformation is considered. It is shown that the conditions that infinitesimally gauge-related solutions are required to fullfill depend on the algebraic structure of the Riemann tensor. For general Petrov type I, type II and type D, these conditions are not only necessary but also sufficient and the explicit transformation can be given.

32288 **(UWThPh—80-06) Another definition for time delay.** Narnhofer, H. (Vienna Univ. (Austria)). 1980. 6p. NTIS (US Sales Only), PC A02/MF A01. Order Number DE84701762.

Time delay is defined by geometrical considerations which work in classical as well as in quantum mechanics, and its connection with the S-matrix and the virial is proven for potentials with V(x vector) and x vector V(x vector) vanishing as rsup(-1-epsilon) for r → infinity.

32289 **(UWThPh—80-12) Translation-limit of a Poincare gauge theory of gravity.** Wallner, R.P. (Vienna Univ. (Austria)). 1980. 7p. NTIS (US Sales Only), PC A02/MF A01. Order Number DE84701766.

The field equations of a Poincare gauge theory proposed by the author are examined in the limit of vanishing Riemann-Cartan curvature and vanishing rotational coupling constant. It is shown that within this limit, torsion remains undetermined by the field equations and fades out to a mere gauge dependent function of the metric. In the case of 0(3) spherical symmetry this is exhibited explicitly, at the same time facing also the v.d. Heyde/Hehl theory with that topic.

32290 **(UWThPh—83-20) Schwarzschild superboost.** Aichelburg, P.C.; Embacher, F. (Vienna Univ. (Austria)). 1983. 9p. NTIS (US Sales Only), PC A02/MF A01. Order Number DE84701767.

A limiting procedure is applied to construct non-gauge solutions to the linearized spin-3/2 field in N=1 supergravity. The background metric represents a gravitational pp-wave arising from boosting the Schwarzschild line element to the speed of light, while the gravitino field is the induced limit of a pure gauge solution on the Schwarzschild background.

32291 **(UWThPh—83-22) Non-gauge spin-3/2 fields from supercovariantly constant spinors.** Aichelburg, P.C.; Gueven, R. (Vienna Univ. (Austria)). 1983. 8p. NTIS (US Sales Only), PC A02/MF A01. Order Number DE84701768.

We point out a limiting procedure which enables one to construct in supergravity theories non-gauge, linearized spin-3/2 fields with the aid of the supercovariantly constant spinors. We give an explicit application of the procedure for N=2 supergravity.

32292 **Kinetics of a first-order phase transition: Computer simulations and theory.** Penrose, O.; Lebowitz, J.; Marro, J.; Kalos, M.; Tobochnik, J. (Faculty of Mathematics, The Open University, Milton Keynes, England and Mathematics Department, Rutgers University, New Brunswick, New Jersey). *Journal of Statistical Physics;* **34**: No. 2, 399-426(Feb 1984). Contract AC02-76ER03077.

We have a quantitative comparison between the predictions of the Becker-Doering equations and computer simulations on a model of a quenched binary A-B alloy. The atoms are confined to the vertices of a simple cubic lattice, interact through attractive nearest neighbor interactions, and move by interchanges of nearest neighbor pairs (Kawasaki dynamics). We study in particular the time evolution of the number of clusters of A atoms of each size, at four different concentrations: rho/sub A/ = 0.035, 0.05, 0.075, and 0.1 atoms per lattice site. The temperature is 0.59 times the critical temperature. At this temperature the equilibrium concentration of A atoms in the B-rich phase is rho/sup eq//sub A/ = 0.0145 atoms/lattice site. The coefficients entering the Becker-Doering equations are obtained by extrapolation from previously published low-density calculations, leaving the time scale as the only adjustable parameter. We find good agreement at the three lower densities. At 10% density the agreement is, as might be expected, less satisfactory but still fairly good-indicating a quite wide range of utility for the Becker-Doering equations.

32293 **Finite particle number approach to physics.** Noyes, H.P. (Stanford Linear Accelerator Center, CA (USA)). pp 537-556 of Wave-particle dualism. A tribute to Louis de Broglie on his 90th birthday. Diner, S.; Fargue, D.; Lochak, G.; Selleri, F. (eds.) (Fondation Louis de Broglie, Paris, France). Dordrecht, Netherlands; D. Reidel (1984). (CONF-820473—).

From Symposium on wave particle dualism; Perugia, Italy (22 Apr 1982).

A preliminary version of this paper is available as SLAC-PUB--2906 (April 1982).

Starting from a discrete, self-generating and self-organizing, recursive model and self-consistent interpretive rules the author constructs: the scale constants of physics (3, 10, 137, 1.7x10^{38}); 3+1 Minkowski space with a discrete metric and the algebraic bound Δepsilon·Δtau >= 1; the Einstein-deBroglie relation; algebraic 'double slit' interference; a single time momentum space scattering theory connected to laboratory experience; an approximation to 'wave functions'; 'local' phase severence and hence both distant correlations and separability; baryon number, lepton number, charge and helicity; msub(p)/msub(e); a cosmology not in disagreement with current observations.

32294 **(LA-UR—84-344) Calculation of shock problems by using four different schemes.** Lee, W.H.; Whalen, P.P. (Los Alamos National Lab., NM (USA)). 1984. Contract W-7405-ENG-36. 12p. (CONF-840720—1). NTIS, PC A02/MF A01; 1; GPO Dep. Order Number DE84006032.

From International conference on numerical methods for transient and coupled problems; Venice, Italy (9 Jul 1984).

Portions are illegible in microfiche products.

Results are shown of the use of several different shock treatments in one- and two-dimensional Lagrangian code calculations of strong shock problems with known solutions. The shock treatments are (A) von Neumann-Richtmyer artificial viscosity; (B) Fixed length artificial viscosity; (C) Artificial energy diffusivity combined with artificial voscosity; and (D) Modified Godunov. The similarity test problems are plane and spherical implosions followed through a reflection. The problems are generated in the codes by imposing an inward directed velocity at one boundary of an initially, quiescent, gamma law gas with the other boundary fixed. Results are shown for calculations on uniform and non-uniform meshes. On non-uniform meshes, no method gives good results although method D is probably superior. Method B produces good appearing results with much shock smearing for the initial shock transit but the worst results after shock reflection. On uniform meshes, method C does the best job of handling the effects of shock initiation at boundaries while method A produces the worst results. Method D results in the smoothest flow field with less over-or-under-shooting, Gibbs phenomena. 14 references.

32295 **(LA-UR—84-1505) Quasi-invariance (rescaling) in nonlinear physics.** Munier, A.; Feix, M.R. (Los Alamos National Lab., NM (USA); Orleans Univ., 45 (France)). May 1984. Contract W-7405-ENG-36. 5p. (CONF-8405168—1). NTIS, PC A02/MF A01; GPO Dep. Order Number DE84012629.

From International colloquium on group theoretical methods in physics; College Park, MD, USA (21 May 1984).

Consider the following phase space-time transformation q/sup i/ = xi/sup i/C(t), p/sub i/ = π/sub i//C(t), THETA = THETA(t) where q/sup i/, p/sub i/, t and xi/sup i/, π/sub i/, THETA are the coordinate, momentum and time variables in the old and new space respectively, and where C(t) and THETA(t) are arbitrary functions of time. These transformations are shown to be generalized canonical transformations (GCT). The new variables reduce to the usual invariants of similarity solutions when such a transformation is found that leaves the governing equations strictly invariant. In most cases, for equations not completely integrable, no more than one group may usually be found. The invariants of the group are then used to absorb one independent variable, decreasing by one their number, but at the price of specializing initial conditions. For second order ordinary differential equations (including systems with friction), the method can be used to find strict or asymptotic invariants. We give two examples. The first deals with a one species plasma in cylindrical geometry embedded in a time-varying magnetic field for which the Brillouin flow is shown to be a general attractor. The second deals with the nonlinear heat-diffusion equation for which we compare the asymptotic solution to those obtained by self-similarity arguments.

32296 **(BNL-tr—1031) Numerical diffraction by a uniform grid.** Bamberger, A.; Guillot, J.C.; Joly, P. (Ecole Polytechnique, 91 - Palaiseau (France). Portions are illegible in microfiche products.

In this report we analyze the influence of a spatial discretization on the propagation of a wave generated by a harmonic point source. We consider finite element and finite difference schemes on a uniform grid for the wave equation. We study the asymptotic behavior in space of the elementary solution of the associated Helmholtz equation. We look at the shape of the wave fronts and at the distribution of the amplitude along these fronts. We measure the anisotropy and the dispersion as function of the wave number and the mesh size. We derive results which complement those that have been obtained by plane wave analysis. Some of these results are classic in crystallography. The method of analysis is based on stationary phase techniques, commonly used in the theory of partial differential equations.

32297 **Lagrangian coordinates for moving boundary problems.** Wilson, D.G. (Union Carbide Corp., Nuclear Div., Oak Ridge, TN). *SIAM Journal on Applied Mathemadics;* **42**: No. 6, 1195-1201(Dec 1982). Contract W-7405-ENG-26.

Changes of density which occur naturally in phase change problems introduce movement of bulk material. It is customary in analyzing such problems to ignore this unpleasant complication and consider the densities to be equal. But for one-dimensional problems the complexities introduced by this bulk movement can easily be

circumvented. The key idea is posing the problem in local coordinates which are fixed in each phase. We show how to define suitable moving coordinates and, using them, pose and give an explicit solution for a one-dimensional, multi-phase Stefan problem with phases of distinct densities. This explicit solution is essentially a similarity solution in the local coordinates. However, the local coordinates could be used with finite element or finite difference schemes to analyze problems for which similarity solutions do not exist.

(Max-Planck-Institut fuer Plasmaphysik, Garching (Germany, F.R.); Oak Ridge National Lab., TN (USA)). 1984. Contract AC05-84OR21400. 16p. NTIS, PC A02/MF A01; 1; GPO Dep. Order Number DE84012329.

From 6. international conference on plasma surface interactions in controlled fusion devices; Nagoya, Japan (14 May 1984).

Portions are illegible in microfiche products.

An isotopic marker technique has been developed and used to measure near-surface erosion and carbon and impurity deposition on graphite samples in the ASDEX divertor chamber. Papyex graphite strips were enriched to ~ 20% ^{13}C over the first 1000 A by ion implantation. The implanted ^{13}C can be clearly distinguished from ^{12}C of the host by Rutherford backscattering using 2.7 MeV ^{4}He. Carbon erosion and deposition were determined from changes in the depth distribution of the ^{13}C, and impurity accumulation was also monitored in the backscattering spectrum. The ^{13}C profiles remained sharp in spite of high heat fluxes to the samples (sufficient to melt stainless steel), and the results showed clear evidence of simultaneous erosion and deposition of carbon and impurities. During 2.4 MW neutral injection, net carbon erosion exceeded 250 A/s in the divertor throat. High carbon erosion was also observed during periods of substantial Fe and Ti impurity accumulation on the samples. The results demonstrate the applicability of the ^{13}C technique for measuring erosion/deposition at high-heat-flux surfaces such as limiters or divertor plates.

32300 **(CONF-8405170—1) Effects of preionization by electron cyclotron heating in INTOR.** England, A.C.; Eldridge, D.C. (Oak Ridge National Lab., TN (USA)). 1984. Contract AC05-84OR21400. 12p. NTIS, PC A02; 1; GPO Dep. Order Number DE84012332.

From ETR-INTOR workshop; Atlanta, GA, USA (1 May 1984).

Paper copy only, copy does not permit microfiche production.

A model has been developed for the electron cyclotron heating (ECH) preionization and startup effects on the ISX-B tokamak. This model has satisfactory agreement with most of the observed phenomena on ISX-B. The model has been applied to INTOR under the assumption that sufficient power at a frequency commensurate with this device will be on hand. We have assumed the following parameters for INTOR: R = 5.3 m,a = 1.52 m, B/sub t/ = 6 T, and a maximum applied loop voltage of 35 V. The results suggest that moderate amounts of preionization will aid in the start up by allowing a reduction in the applied loop voltage, V/sub l/, will save some transformer flux, and will permit a more rapid current ramp. Massive preionization (≧ 1 MW) does not appear to be necessary.

32301 **(DOE/DP/40124—32) Observation of scattered light between omega/2 and 3/2 omega in short wavelength laser produced plasmas.** Goldman, L.M.; Seka, W.; Tanaka, K.; Simon, A.; Short, R. (Rochester Univ., NY (USA). Lab. for Laser Energetics). 1984. Contract AC08-80DP40124. 15p. (CONF-8405163—3). NTIS, PC A02/MF A01; GPO Dep. Order Number DE84012533.

From Anomalous absorption conference; Charlottesville, VA, USA (6 May 1984).

Extensive measurements have been carried out on scattered radiation in the spectral region between omega/2 and 3/2 omega from plasmas produced by 351 nm lasers. The relative intensities of the continuum radiation relative to the line features at omega/2 and 3/2 omega will be shown. A new spectral feature has been observed between 3/2 omega and omega which may be interpreted as an upscattered component produced by ordinary Raman scattering. The overall experimental evidence for ordinary Raman scattering vs stimulated Raman scattering will be discussed.

32302 **(DOE/DP/40124—36) Nonlinear saturation of the parametric instability for three coupled oscillators.** Simon, A.; McKinstrie, C.J.; Williams, E.A. (Rochester Univ., NY (USA). Lab. for Laser Energetics). 11 May 1984. Contract AC08-80DP40124. 15p. (CONF-8405163—4). NTIS, PC A02/MF A01; GPO Dep. Order Number DE84012488.

From Anomalous absorption conference; Charlottesville, VA, USA (6 May 1984).

The case of three parametrically coupled and damped oscillators is considered. One (with natural frequency ω_0) is externally driven at a frequency Ω close to the sum ($\omega_1 + \omega_2$) of the other two. In the vicinity of the parametric instability threshold, we determine the time-asymptotic oscillator amplitudes and nonlinear frequency shifts by using secular-free perturbation analysis. The resulting amplitudes are sensitive to the mismatch $\delta (= \Omega - \omega_1 - \omega_2)$, if Ω and ω_0 are dissimilar, and rise sharply as $\delta \rightarrow 0$. If Ω is close to ω_0, the behavior is quite insensitive to δ, and models results obtained for parametric instabilities in plasma. The single parametrically-driven oscillator threshold result is also obtained and compared to a general small amplitude result of Landau. This Landau result is then generalized to two coupled oscillators and compared to a result obtained by perturbation analysis. These two cases all behave as the three-oscillator does when ω_0 and Ω are dissimilar. All solutions are shown to be stable.

32303 **(DOE/DP/40124—38) Nonlocal heat transport by non-Maxwellian electrons.** Swartz, K.; Short, R.W (Rochester Univ., NY (USA). Lab. for Laser Energetics). 30 Mar 1984. Contract AC08-80DP40124. 8p. (CONF-8405163—2). NTIS, PC A02/MF A01; GPO Dep. Order Number DE84012391.

From Anomalous absorption conference; Charlottesville, VA, USA (6 May 1984).

The generalization of the Spitzer-Harm solution to steep density and temperature gradients requires the computation of the appropriate non-Maxwellian isotropic part of the electron distribution. We develop analytic solutions for a steady state, high-Z plasma, employing the diffusion approximation. Applications of our solution include computation of the resulting heat flux, thermal smoothing of transverse temperature perturbations, and modification of linear heat flow instabilities.

32304 **(DOE/ER/53140—14) Monte Carlo studies of tandem mirror plasmas interacting with waves in the Ion Cyclotron Range of Frequencies (ICRF). Progress report, October 1, 1982-May 18, 1984.** Todd, A.M.M. (Grumman Aerospace Corp., Princeton, NJ (USA)). May 1984. Contract AC02-82ER53140. 20p. NTIS, PC A02/MF A01; 1; GPO Dep. Order Number DE84012390.

Portions are illegible in microfiche products.

A study of rf fueling, rf anchor, hot electron anchor, rf start up and rf-sustained mode operation in Tandem Mirrors has been completed. Significant results include finding little performance difference between inboard and outboard antenna location, and an optimum central cell electron to ion temperature ratio of between one and two. TARA hot electron anchor results compare well with the predictions of Kesner et al, but suggest that the ICRF resonance

should be located at the potential peak. Several variance reduction techniques, improved rf operators and a Monte Carlo neutral model have been incorporated in the code, which has also been converted and optimized for NMFECC Cray operation. On going activities include studies of central cell ICRF heating and the application of Monte Carlo non-Maxwellian scattering operators.

32305 **(DOE/ER/53162—3) Non-geometrical optics investigation of mode conversion in weakly relativistic inhomogeneous plasmas. Annual progress report, September 14, 1983-May 14, 1984.** Imre, K. (City Univ. of New York, NY (USA)). May 1984. Contract AC02-83ER53162. 7p. NTIS, PC A02/MF A01; 1; GPO Dep. Order Number DE84012396.

Portions are illegible in microfiche products.

The coupling of the extra-ordinary and the quasi-electrostatic modes at the second electron cyclotron resonance for a weakly relativistic plasma is investigated, in order to evaluate the effectiveness of the ECRH mechnism to pre-heat the plasma. When the propagation is nearly perpendicular to the external magnetic field, and the plasma density is sufficiently high we find a strong coupling between these waves. In a critical interval of density the geometrical optics model predicts a 100% mode conversion for waves crossing the resonance layer. It is shown that this model fails within a small boundary layer near the resonance, thus requiring a full-wave analysis in this region. The linearized relativistic Vlasov equation is solved in the inner region, and field equations valid within the boundary layer are derived. The outer region is treated using the standard geometrical optics method. The inner solutions are matched to the outer solutions in the usual manner. We have also derived appropriate energy flux theorems so that the energy associated with the wave and the particles can be distinguished.

32306 **(DOE/ET/51013—117) Solution of the relativistic 2-D Fokker-Planck equation for LH current drive.** Hizanidis, K.; Hewett, D.W.; Bers, A. (Massachusetts Inst. of Tech., Cambridge (USA). Plasma Fusion Center; Lawrence Livermore National Lab., CA (USA)). Mar 1984. Contract AC02-78ET51013. 9p. (CONF-840311—7; PFC/CP—84-4). NTIS, PC A02/MF A01; 1; GPO Dep. Order Number DE84010308.

From 4. international symposium on heating in toroidal plasmas; Rome, Italy (21 Mar 1984).

Portions are illegible in microfiche products. Original copy available until stock is exhausted.

We solve numerically the steady-state two-dimensional relativistic Fokker-Planck equation with strong rf diffusion using spectra relevant to recent experiments in ALCATOR-C. The results (current generated, power dissipated, and the distribution of energetic electrons) are sensitive to the location of the spectrum in momentum space. Relativistic effects play an important role, especially for wide spectra. The dependence on the ionic charge number Z/ sub i/ is also investigated. Particular attention is paid to the perpendicular temperature inside the resonant region and beyond, as well as to the angular energetic particle-temperature distribution, T/sub μ/, a function of the pitch angle parameter μ. The dependence of the perpendicular temperature on the location of the spectrum is also investigated analytically with a model based on the method of moments and the results compared with those found numerically.

32307 **(DOE/ET/53051—63) Disruptive instabilities in a poloidal divertor tokamak.** Osborne, T.H. (Wisconsin Univ., Madison (USA)). Feb 1984. Contract AC02-76ET53051. 137p. NTIS, PC A07/MF A01; 1; GPO Dep. Order Number DE84013054.

Portions are illegible in microfiche products. Original copy available until stock is exhausted; Thesis.

Tokamak discharges are observed with safety factor, q, as low as 0.5 over most of the current channel within the poloidal divertor separatrix. These discharges show sawtooth oscillations, but magnetic probe measurements indicate the central q values, instead of relaxing to 1, remain nearly fixed. The $q = 1$ surface for this case is very near the separatrix, and there is a small oscillation in q near the $q = 1$ surface which is time correlated with the sawtooth oscillations. The observation of discharges which maintain $q < 1$ is at variance with the usual resistive MHD theory of sawtooth oscillations. These discharges have poor energy confinement (tau/sub E/ < 50 μs). If $q = 1$, sawtooth oscillations are observed in which the disruption (sawtooth crash) itself has an $n = m = 1$ helical structure. At low toroidal plasma current and high toroidal field, several small sawteeth of period 100 to 200 μs are superimposed on giant sawteeth of period 1ms. Precursor oscillations with even m and odd n are observed on magnetic loops for both types of sawtooth oscillations. As the plasma current is increased with the toroidal magnetic field constant, the giant sawteeth become less regular. At large enough plasma current, only small sawtooth oscillations are observed; these show an $m = n = 1$ precursor in the soft x-ray. An MHD equilibriumm code predicts that the $q = 2$ surface is very near the divertor separatrix for this case. This suggests that the $m = 2$, $n = 1$ disruption may be eliminated by the proximity of the $q = 2$ surface and the separatrix. These discharges have good energy confinement time (tau = 600 μs).

32308 **(DOE/ET/53051—65) Second harmonic electron cyclotron emission studies of Tokapole-II plasmas.** Sengstacke, M.A. (Wisconsin Univ., Madison (USA)). Mar 1984. Contract AC02-76ET53051. 132p. NTIS, PC A07/MF A01; 1; GPO Dep. Order Number DE84013103.

Portions are illegible in microfiche products. Original copy available until stock is exhausted; Thesis.

The electron temperature is an important parameter in plasma physics. The intensity of electron cyclotron emission (ECE) is a function of the electron temperature. This function reduces to a direct proportionality for optically thick plasmas. Thus a study of ECE can help us understand various plasma properties. The principal diagnostic used is a radiometer consisting of a microwave superheterodyne receiver operating in the K band, (26.5,40) GHz, and fed by a three inch parabolic mirror with a spot size of about 4.4 cm. The entire microwave assembly can be rotated through 90° about the mirror axis to facilitate polarization measurements. A ray tracing analysis of Tokapole-II shows that refraction is significant for plasmas observed in this work.

32309 **(DOE/ET/53051—66) Experimental observation of the shear Alfven resonance in a tokamak.** Witherspoon, F.D.; Prager, S.C.; Sprott, J.C. (Wisconsin Univ., Madison (USA). Dept. of Physics). May 1984. Contract AC02-76ET53051. 18p. NTIS, PC A02/MF A01; 1; GPO Dep. Order Number DE84012993.

Portions are illegible in microfiche products. Original copy available until stock is exhausted.

Experiments in Tokapole II have demonstrated the shear Alfven resonance in a tokamak by direct probe measurement of the wave magnetic field within the plasma. The resonance is driven by external antennas and is identified as radially localized enhancements of the poloidal wave magnetic field. The radial location agrees with calculations which include toroidicity and noncircularity of the plasma cross-section. Other properties such as polarization, radial width, risetime, and wave enhancement also agree with MHD theory.

32310 **(DOE/ET/53088—132) Interaction of the precessional wave with free-boundary Alfven surface waves in tandem mirrors.** Berk, H.L.; Kaiser, T.B. (Texas Univ., Austin (USA). Inst. for Fusion Studies; Lawrence Livermore National Lab., CA (USA)). Apr 1984. Contract FG05-80ET53088. 29p. NTIS, PC A03/MF A01; 1; GPO Dep. Order Number DE84012527.

Portions are illegible in microfiche products.

We consider a symmetric tandem mirror plugging a long central cell, with plugs stabilized by a hot component plasma. The system is taken to have a flat pressure profile with a steep edge gradient. We then consider the interaction of the precessional mode with Alfven waves generated in the central cell. This analysis is non-eikonal and is valid when $m\Delta/r < 1$ (m is the azimuthal mode number. r the plasma radius and Δ the radial gradient scale length) for long-wavelength radial modes. We find that without FLR effects the precessional mode is always destabilized by the excitation of the Alfven waves for $m \geqq 2$. For $m=1$, it is possible to achieve stabilization with conducting walls. A discussion is given of how FLR affects stabilization of the $m \geqq 2$ long-wavelength modes and of finite-Larmor-radius stabilization of modes described in the eikonal approximation.

32311 **(GA-A—17528) High power neutral beam heating on Doublet III.** Overskei, D.O.; Armentrout, C.J.; Baur, J.F.; Blau, F.P.; Bramson, G.; Burrell, K.H.; Chase, R.P.; DeBoo, J.C.; Ejima, S.; Fairbanks, E.S. (GA Technologies, Inc., San Diego, CA (USA)). Mar 1984. Contract AT03-84ER51044. 22p. (CONF-840311—13). NTIS, PC A02/MF A01; 1; GPO Dep. Order Number DE84012471.

From 4. international symposium on heating in toroidal plasmas; Rome, Italy (21 Mar 1984).

Portions are illegible in microfiche products.

Energy confinement studies with up to 7.5 MW of neutral beam heating power have been performed on the Doublet III tokamak. We have found that during beam injection divertor operation results in up to a factor of two improvement in energy confinement as compared to comparable limiter discharges. In both configurations the confinement improves linearly with plasma current. In addition, there are indications that a new plateau in energy confinement time is reached with injection at high power levels. In all configurations electron transport is the major heat loss channel. Transport analysis indicates that the electron thermal conductivity is typically a factor of 2 to 3 lower in diverted discharges as compared to comparable limiter discharges. However, there are indications that the plasma edge may be important since improved confinement is correlated with the separation between the limiter and the separatrix.

32312 **(GEPP-TIS—802) Review of anode phenomena in vacuum arcs.** Miller, H.C. (General Electric Co., St. Petersburg, FL (USA). Neutron Devices Dept.). 4 Jun 1984. Contract AC04-76DP00656. 46p. NTIS, PC A03/MF A01; GPO Dep. Order Number DE84012371.

This paper reviews anode phenomena in vacuum arcs. It discusses arc modes at the anode, anode temperature measurements, anode ions, transitions of the arc into various modes (principally the anode spot mode), and theoretical explanations of anode phenomena. A vacuum arc can exhibit five anode discharge modes: (1) a low current mode in which the anode is basically passive, acting only as a collector of particles emitted from the cathode; (2) a second low current mode that can occur if the electrode material is readily sputtered (a flux of sputtered atoms will be emitted by the anode); (3) a footpoint mode, characterized by the appearance of one or more luminous spots on the anode (footpoints are much cooler than the true anode spots present in the last two modes); (4) an anode spot mode in which one large or several small anode spots are present (such spots are very luminous, have a temperature near the atmospheric boiling point of the anode material, and are a copious source of vapor and ions); and (5) an intense arc mode where an anode spot is present, but accompanied by severe cathode erosion. The arc voltage is relatively low and quiet in the two low current modes and the intense arc mode. It is usually high and noisy in the footpoint mode, and it can be either in the anode spot mode. Anode erosion is low, indeed negative, in the two low current modes, and it is low to moderate in the footpoint mode. Severe anode erosion occurs in both the anode spot and intense arc modes.

32313 **(GTFR—46) Investigation of neutral beam driven impurity flow reversal as an impurity control method in future tokamaks.** Bennett, R.B.; Stacey, W.M. Jr. (Georgia Inst. of Tech., Atlanta (USA)). Mar 1984. Contract AS05-78ET52025. 28p. NTIS, PC A03/MF A01; 1; GPO Dep. Order Number DE84008855.

Portions are illegible in microfiche products.

A theory for the effect of directed neutral beam injection on impurity transport in tokamaks is extended to include temperature gradient effects. The extended theory is compared with experimental data, from PLT, and certain coefficients are adjusted to provide agreement. The adjusted theory is applied to assess the potential of NBI being used to prevent impurities from penetrating to the center of future tokamak plasmas, thereby possibly creating a cold radiating edge. The results indicate the possibility of creating a cold radiating edge in TETR and in future tokamaks represented by FED and STARFIRE.

32314 **(GTFR—47) Rotation and impurity transport in a tokamak plasma with directed neutral beam injection.** Stacey, W.M. Jr.; Sigmar, D.J. (Georgia Inst. of Tech., Atlanta (USA); Oak Ridge National Lab., TN (USA)). Feb 1984. Contract AS05-78ET52025. 32p. NTIS, PC A02/MF A01; GPO Dep. Order Number DE84008014.

We have extended our previous collisional-regime theory for rotation and impurity transport in a tokamak plasma with strong, directed NBI and strong rotation (v/sub phi/ ~ v/sub th/) to the plateau regime. We present a kinetic theory derivation of the parallel viscous force in the strong rotation ordering and a self-consistent formalism for calculating ion and impurity rotation velocities and radial transport fluxes, as well as the radial electric field and the poloidal variation of the impurity density upon which the former strongly depend. Calculations for model problems representative of ISX-B and PLT are presented. The predicted impurity transport exhibits features in agreement with experimental observations.

32315 **(INIS-mf—4754(No.23)) International bulletin on atomic and molecular data for fusion. No. 23.** Katsonis, K. (ed.). (International Atomic Energy Agency, Vienna (Austria). Atomic and Molecular Data Unit). Sep 1983. 61p. NTIS (US Sales Only), PC A04/MF A01. Order Number DE84780366.

This bulletin deals with atomic and molecular data for fusion. A bibliography for the most recent data presented in the document is provided. Work in progress is briefly reported (OIV in temperature and density diagnostics, measured cross section for electron impact ionization of Iron and Tungsten).

32316 (INIS-mf—8901, pp 309-313) **Surface probe measurements in ISX-B and EBT-S.** Zuhr, R.A. (Oak Ridge National Lab., TN (USA)). 1983. NTIS (US Sales Only), PC A14/MF A01. Order Number TI84701920. (CONF-830120—Exc.).

From Symposium on surface science; Obertraun, Austria (30 Jan 1983).

A series of in situ surface deposition probe measurements has been made on the ISX-B tokamak and the Elmo bumpy torus EBT-S. Surface deposition probe techniques have been shown to be an effective means of determining the characteristics of the plasma edge region of magnetic confinement devices. Experimental results on ISX-B and EBT-S have led to a consistent picture of the edge plasma and the dominant impurity introduction mechanisms. This picture is supported by numerous other measurements and emphasizes the importance of concentrating several techniques on the complex problems of plasma fusion.

32317 **(LA-UR—84-1077) Nonthermal effects on the diagnostics of a collapsing gas shell Z-pinch.** Jones, L.A.; Kania, D.R. (Los Alamos National Lab., NM (USA)). 1984. Contract W-7405-ENG-36. 10p. (CONF-8403100—1). NTIS, PC A02/MF A01; GPO Dep. Order Number DE84009996.

From Conference of Z-pinches for fusion; Alexandria, VA, USA (29 Mar 1984).

The collapsing gas shell Z-pinch at Los Alamos is powered by a 72 kJ - 600 kV Marx bank. This Marx bank consists of twelve six-stage modules which are used to pulse charge a 1 Ω-90 ns long water line in ~ 500 ns. The plasma produced by this device has been well diagnosed, but rather than present the results of all the diagnostics, we will discuss only those relevant to nonthermal effects. First, we show a spectrum taken with a 1 m VUV spectrograph. A section of the spectrum has been microdensitometered to show that we observe Ar X-XIII in this spectrum. This same instrument was used to image the spectrum both axially and radially. The same portion of the spectrum discussed above is shown along with a time integrated, filtered (1 to 6 keV) x-ray pinhole picture. These pictures show that the collapsed plasma is axially inhomogenous, i.e., He-like argon, represented by the x-ray pinhole picture, forms in hot spots along the axis and lower ionization stages fill in the regions between the hot spots. Next we present a spectrum taken with a curved crystal instrument. This spectrum shows the argon XVII, He-like resonance and intercombination lines, along

with satellite structures from argon X to XVI. Another part of the spectrum contains weak H-like lines.

32318 **(PPPL—2109) Studies of thermal energy confinement scaling in PDX plasmas: $D^0 \rightarrow H^+$ limiter discharges.** Kaye, S.M.; Goldston, R.J.; Bell, M.; Bol, K.; Bitter, M.; Fonck, R.; Grek, B.; Hawryluk, R.J.; Johnson, D.; Kaita, R. (Princeton Univ., NJ (USA). Plasma Physics Lab.). Jun 1984. Contract AC02-76CH03073. 102p. NTIS, PC A06/MF A01; 1; GPO Dep. Order Number DE84013051.

Portions are illegible in microfiche products. Original copy available until stock is exhausted.

Experiments were performed on the PDX tokamak to study plasma heating and β scaling with higher power, near-perpendicular neutral beam injection. The data taken during these experiments were analyzed using a time-dependent data interpretation code (TRANSP) to study the transport and thermal confinement scaling over a wide range of plasma parameters. This study focuses on results from experiments with D^0 injection into H^+ plasmas using graphite rail limiters, a = 40 to 44 cm, R = 143 cm, I/sub p/ = 200 to 480 kA, B/sub T/ = 0.7 to 2.2 T, and typically anti n/sub e/ = 2.5 to 4.2 x 10^{13} cm^{-3}. The results of this study indicate that for both ohmic and neutral beam heated discharges the energy flow out of the plasma is dominated by anomalous electron losses, attributed to electron thermal conduction. The ion conduction losses are well described to electron thermal conduction. The ion conduction losses are well described by neoclassical theory; however, the total ion loss influences the power balance significantly only at high toroidal fields and high plasma currents.

32319 **(SAI—84-1606/PRI-78) Generalized gyrokinetics.** Bernstein, I.B.; Catto, P.J. (Yale Univ., New Haven, CT (USA); Science Applications, Inc., Boulder, CO (USA). Plasma Research Inst.). May 1984. Contract AC03-76ET53057. 38p. NTIS, PC A03/MF A01; GPO Dep. Order Number DE84012795.

A nonlinear gyrokinetic formalism is developed which permits mean velocities comparable to thermal speeds in arbitrary magnetic field geometry. The theory is fully electromagnetic and does not employ an eikonal ansatz. The freedom in the theory is exploited to display simply the connection with ideal magnetohydrodynamics.

32320 **(SAI—84-3028/PRI-73) Particle loss rates from electrostatic wells of arbitrary mirror ratios.** Catto, P.J.; Li, X.Z. (Science Applications, Inc., Boulder, CO (USA). Plasma Research Inst.). Mar 1984. Contract AC03-76ET53057. 24p. NTIS, PC A02/MF A01; GPO Dep. Order Number DE84008940.

Single integral expressions for the particle loss rate from an electrostatic trap with Zephi$_0$/t much $\geqq$ 1 are derived which span all possible mirror ratios R, where phi$_0$, Z, and T are the potential well depth, charge number, and species temperature. The two expressions are shown to be identical for a range of intermediate R so that one expression is valid for small to intermediate R (R $\leqq$ 1), while the other is appropriate from intermediate to large R (R much $\geqq$ T/Zephi$_0$). Three particularly simple analytic limits are found to exist: (i) R much $\leqq$ T/Zephi$_0$, (ii) T/Zephi$_0$ much $\leqq$ R $\leqq$ 1, and (iii) R $\geqq$ 1.

32321 **(SAND—83-2641C) Energy-resolving carbon resistance probes for plasma edge characterization.** Wampler, W.R. (Sandia National Labs., Albuquerque, NM (USA)). May 1984. Contract AC04-76DP00789. 13p. (CONF-840520—4). NTIS, PC A02/MF A01; GPO Dep. Order Number DE84012235.

From 6. international conference on plasma surface interactions in controlled fusion devices; Nagoya, Japan (14 May 1984).

The resistance increase in thin carbon films caused by energetic particle bombardment has been developed into a new device, the carbon resistance probe, to measure the energy and flux of particles at the edge of a plasma. In the present work we have calibrated this probe by ion implantation of hydrogen and deuterium with energies from 20 to 1600 eV, and have demonstrated sensitivity to particles with energies as low as 30 eV. Calibrations are also presented for thin-layer resistance probes, a new configuration in which energy resolution is obtained using carbon films and ranging overlayers comparable in thickness to the range of the particles. The results show that thin-layer probes can be used to measure the particle energies and fluxes typically encountered at the first wall of a tokamak.

32322 **(SAND—83-8236) Mechanical device for enhancing halo density in the TMX-U tandem mirror.** Hsu, W.L.; Barr, W.L.; Simonen, T.C. (Sandia National Labs., Livermore, CA (USA); Lawrence Livermore National Lab., CA (USA)). Apr 1984. Contract AC04-76DR00789. 27p. NTIS, PC A03/MF A01; GPO Dep. Order Number DE84012224.

The halo recycler, a mechanical device similar to pumped limiters used in tokamaks, is studied as a means of enhancing the halo plasma density in the Tandem Mirror Experiment Upgrade (TMX-U). The recycler structure consists of an annular chamber at each end of the tandem mirror device where the halo plasma is collected. The halo plasma density is increased by recycling the halo ions as they are neutralized by the collector plate. With sufficient power fed into the halo electrons, the recycler can sustain an upstream electron temperature of 30 eV for effective halo shielding while maintaining a low temperature of 5 eV near the collector plate to reduce sputtering. A power flow model has shown that the required power for heating the halo is low enough to make the halo recycler a practical concept.

32323 **(UCID—20026) Impurity characteristics of TMX-U.** Allen, S.L.; Yu, T.L.; Nash, T.J. (Lawrence Livermore National Lab., CA (USA)). 1 May 1984. Contract W-7405-ENG-48. 38p. NTIS, PC A03/MF A01; GPO Dep. Order Number DE84012413.

A study of the concentrations, radiated power, and sources of impurities in the TMX-U plasma is presented. Three extreme ultraviolet (EUV) instruments were used: one monochromator that measures time-resolved radial profiles of a particular impurity line, and two time-resolving spectrographs that measure the time histories of several impurity lines in a single shot. The major impurities found in the TMX-U plasma are carbon, nitrogen, and oxygen. Titanium and silicon are also observed. The impurity concentrations are low, less than 1% and the radiated power is a small fraction of the input power. The major source of oxygen and nitrogen is the neutral beam injector. Wall conditioning, such as glow discharge cleaning and titanium gettering, decreases the impurity concentrations, particularly carbon. There does not seem to be an accumulation of impurities in the thermal barrier region under the present plasma conditions. Future experiments are discussed.

32324 **(UCRL—89202) Evaluating and tuning system response in the MFTF-B control and diagnostics computers.** Palasek, R.L.; Butner, D.N.; Minor, E.G. (Lawrence Livermore National Lab., CA (USA)). 30 Nov 1983. Contract W-7405-ENG-48. 8p. (CONF-831203—142). NTIS, PC A02/MF A01; 1; GPO Dep. Order Number DE84012603.

From 10. symposium on fusion engineering; Philadelphia, PA, USA (5 Dec 1983).

Portions are illegible in microfiche products.

The software system running on the Supervisory Control and Diagnostics System (SCDS) of MFTF-B is, for the major part, an event driven one. Regular, periodic polling of sensors' outputs takes place only at the local level, in the sensors' corresponding local control microcomputers (LCC's). An LCC reports a sensor's value to the supervisory computer only if there was a significant change. This report is passed as a message, routed among and acted upon by a network of applications and systems tasks within the supervisory computer (SCDS). Commands from the operator's console are similarly routed through a network of tasks, but in the opposite direction to the experiment's hardware. In a network such as this, response time is partialy determined by system traffic. Because the hardware of MFTF-B will not be connected to the computer system for another two years, we are using the local control computers to simulate the event driven traffic that we expect to see during MFTF-B operation. In this paper we show how we are using the simulator to measure and evaluate response, loading, throughput, and utilization of components within the computer system. Measurement of the system under simulation allows us to identify bottlenecks and verify their unloosening. We also use the

traffic simulators to evaluate prototypes of different algorithms for selected tasks, comparing their responses under the spectrum of traffic intensities.

32325 **(UCRL—89221) Design of the plasma current sensor diagnostic for MFTF-B.** Goerz, D.A.; House, P.A.; Wells, C.W. (Lawrence Livermore National Lab., CA (USA)). 23 Nov 1983. Contract W-7405-ENG-48. 6p. (CONF-831203—149). NTIS, PC A02/MF A01; GPO Dep. Order Number DE84012540.

From 10. symposium on fusion engineering; Philadelphia, PA, USA (5 Dec 1983).

The Plasma Current Sensor (PCS) diagnostic includes large diamagnetic loops (DL) that fully encircle the plasma as well as small multi-turn pickup coils (PCs) located between the plasma and the superconducting magnets. Both types of sensors respond to changing magnetic flux linkages caused by plasma currents and are used to measure plasma diamagnetism, from which estimates of temperature and density can be made. The DLs are used in the central cell and Axicell regions, while the PCs are used in the Yin-yang regions where DLs are impractical. Other PCs are used in the central cell to detect axial plasma currents, to help tune trim coils in the transition cell and confirm theoretical estimates of radial diffusion limits. This paper describes the PCS diagnostic and presents the detailed mechanical and electrical designs.

32326 **(UCRL—89222) Local area network for the plasma diagnostics system of MFTF-B.** Lau, N.H.; Minor, E.G. (Lawrence Livermore National Lab., CA (USA)). 1983. Contract W-7405-ENG-48. 7p. (CONF-831203—140). NTIS, PC A02/MF A01; 1; GPO Dep. Order Number DE84012601.

From 10. symposium on fusion engineering; Philadelphia, PA, USA (5 Dec 1983).

Portions are illegible in microfiche products.

The MFTF-B Plasma Diagnostics System will be implemented in stages, beginning with a start-up set of diagnostics and evolving toward a basic set. The start-up set contains 12 diagnostics which will acquire a total of about 800 Kbytes of data per machine pulse; the basic set contains 23 diagnostics which will acquire a total of about 8 Mbytes of data per pulse. Each diagnostic is controlled by a Foundation System consisting of a DEC LSI-11/23 microcomputer connected to CAMAC via a 5 Mbits/second serial fiber-optic link and connected to a supervisory computer (Perkin-Elmer 3250) via a 9600 baud RS232 link. The Foundation System is a building block used throughout MFTF-E for control and status monitoring. However, its 9600 baud link to the supervisor presents a bottleneck for the large data transfers required by diagnostics. To overcome this bottleneck the diagnostics Foundation Systems will be connected together with an additional LSI-11/23 called the master to form a Local Area Network (LAN) for data acquisition.

32327 **(UCRL—89224) Electrical grounding, shielding, and isolation for the MFTF-B plasma diagnostic system.** Deadrick, F.J. (Lawrence Livermore National Lab., CA (USA)). 28 Nov 1983. Contract W-7405-ENG-48. 5p. (CONF-831203—150). NTIS, PC A02/MF A01; 1; GPO Dep. Order Number DE84012539.

From 10. symposium on fusion engineering; Philadelphia, PA, USA (5 Dec 1983).

Portions are illegible in microfiche products.

The electrical grounding, shielding, and isolation of plasma diagnostics on the Mirror Fusion Test Facility (MFTF-B) is a key part of the overall design. The Electromagnetic Interference (EMI) environment in which the Plasma Diagnostics System (PDS) will be required to operate is very harsh. The electrical grounding and shielding design which is being implemented to cope with this environment follows one which has been used successfully on the Tandem Mirror Experiment (TMX). Details of the MFTF-B plasma diagnostics facility, equipment grounding, shielding and isolation, and the cabling system are described in this paper.

32328 **(UCRL—89283) Design of the electromagnetic fluctuations diagnostic for MFTF-B.** House, P.A.; Goerz, D.A.; Martin, R. (Lawrence Livermore National Lab., CA (USA)). 28 Nov 1983. Contract W-7405-ENG-48. 6p. (CONF-831203—151). NTIS, PC A02/MF A01; GPO Dep. Order Number DE84012541.

From 10. symposium on fusion engineering; Philadelphia, PA, USA (5 Dec 1983).

The Electromagnetic Fluctuations (EMF) diagnostic will be used to monitor ion fluctuations which could be unstable in MFTF-B. Each probe assembly includes a high impedance electrostatic probe to measure potential fluctuations, and a group of nested, single turn loops to measure magnetic fluctuations in three directions. Eventually, more probes and loops will be added to each probe assembly for making more detailed measurements. The sensors must lie physically close to the plasma edge and are radially positionable. Also, probes at separate axial locations can be positioned to connect along the same magnetic field line. These probes are similar in concept to the rf probes used on TMX, but the high thermal load for 30-second shots on MFTF-B requires a water-cooled design along with temperature monitors. Each signal channel has a bandwidth of .001 to 150 MHz and is monitored by up to four different data channels which obtain amplitude and frequency information. This paper describes the EMF diagnostic and presents the detailed mechanical and electrical designs.

32329 **(UCRL—89474) Report on the experience with the Supervisory Control and Diagnostics System (SCDS) of MFTF-B.** Wyman, R.H. (Lawrence Livermore National Lab., CA (USA)). 18 Nov 1983. Contract W-7405-ENG-48. 7p. (CONF-831203—145). NTIS, PC A02/MF A01; 1; GPO Dep. Order Number DE84012599.

From 10. symposium on fusion engineering; Philadelphia, PA, USA (5 Dec 1983).

Portions are illegible in microfiche products.

The Supervisory Control and Diagnostics System (SCDS) of MFTF is a multiprocessor computer system using graphics oriented displays with touch sensitive panels as the primary operator interface. Late in the calendar year 1981 the system was used to control an integrated test of the vacuum vessel, vacuum system, cryogenics system and the superconducting magnet of MFTF. Since the completion of those tests and starting in early calendar 1983 the system has been used for control of the neutral beam test facility at LLNL. This paper presents a short overview of SCDS for the purpose of orientation and then proceeds to describe the difficulties encountered in these preliminary encounters with reality. The band-aids used to hold things together as disaster threatened as well as the long-term solutions to the problems will be discussed. Finally, we will present some comments on system costs and management philosophy.

32330 **(UCRL—98355) Design and prototype results of a far-infrared interferometer for MFTF-B.** Monjes, J.A.; Throop, A.L.; Thomas, S.R.; Peebles, A.; Zu, Qin-Zin. (Lawrence Livermore National Lab., CA (USA); California Univ., Los Angeles (USA)). 30 Nov 1983. Contract W-7405-ENG-48. 8p. (CONF-831203—157). NTIS, PC A02/MF A01; 1; GPO Dep. Order Number DE84012591.

From 10. symposium on fusion engineering; Philadelphia, PA, USA (5 Dec 1983).

Portions are illegible in microfiche products.

A Far-Infrared (FIR) Laser Interferometer (FLI), operating at 185 μm wavelength is planned as part of the initial start-up set of plasma diagnostics for the Mirror Fusion Test Facility (MFTF-B). The FLI will consist of a heterodyne, three-chord laser interferometer which will be used initially to measure line-integrated plasma density in the high-density, center cell region of the machine. The conceptual system design and analysis has been completed. There are several unique environmental/physical constraints and performance requirements for this system which have required that technology-evaluation and prototyping experiments be completed to support the design effort and confirm the expected performance parameters. Issues which have been addressed include extensive use of long-path dielectric waveguide, coupling and control of free-space propagation of the beam, and polarization control. The results and

conclusions of the design analysis and experimental measurements will be presented.

32331 **Initial confinement studies of ohmically heated plasmas in the tokamak fusion test reactor.** Efthimion, P.C.; Bell, M.; Blanchard, W.R.; Bretz, N.; Cecchi, J.L.; Coonrod, J.; Davis, S.; Dylla, H.F.; Fonck, R.; Furth, H.P. (Plasma Physics Laboratory, Princeton University, Princeton, New Jersey 08544). *Physical Review Letters;* **52**: No. 17, 1492-1495(23 Apr 1984). Contract AC02-76CH03073.

Initial operation of the tokamak fusion test reactor has concentrated upon confinement studies of ohmically heated hydrogen and deuterium plasmas. Total energy confinement times (tau/sub E/) are 0.1—0.2 s for a line-average density range (n-bar/sub e/) of (1—2.5) x 10^{19} m^{-3} with electron temperatures of T/sub e/(o)~1.2—2.2 keV, ion temperatures of T/sub i/(0)~0.9—1.5 keV, and Z/sub eff/~3. A comparison of Princeton large torus, poloidal divertor experiment, and tokamak fusion test reactor plasma confinement supports a dimension-cubed scaling law.

32332 **Two-plasmon decay and three halves harmonic generation in filaments in a laser-produced plasma.** Short, R.W.; Seka, W.; Tanaka, K.; Williams, E.A. (Laboratory for Laser Energetics, University of Rochester, Rochester, New York 14627). *Physical Review Letters;* **52**: No. 17, 1496-1499(23 Apr 1984). Contract AC08-80DP40124.

The two-plasmon decay of light propagating in filaments in a laser-produced plasma and the resulting $3\omega_0/2$ light emission is discussed with use of a simplified model. Experimental observations are consistent with the predictions of the model. Implications for use of the $3\omega_0/2$ doublet splitting as a temperature diagnostic are discussed.

32333 **(CTO—2199) Possibility of using pulsed CO_2 lasers for radiation scattering diagnostics in tokamak plasmas.** Zhukovskii, V.G. (UKAEA Culham Lab., Abingdon; Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow. Inst. Atomnoj Ehnergii). Jan 1984. Translation of IAE—3351/7 (1980). 73p. NTIS (US Sales Only), PC A04/MF A01. Order Number DE84901207.

Portions are illegible in microfiche products.

The possibility is discussed of using pulsed CO_2 lasers for measuring basic plasma parameters by the scattering method. In addition to measuring the electron temperature and density one can determine the ion temperature and the effective plasma charge (Z/sub eff/) by small-angle scattering. The use of pulse-periodic CO_2 lasers makes it possible to achieve a multipulse operating regime and thereby to investigate the time dependences of the measured plasma parameters.

32334 **Electron temperature limit for poloidal equilibrium and tokamak containment scaling.** Ware, A.A. (Texas Univ., Austin (USA). Inst. for Fusion Studies). *Comments on Plasma Physics and Controlled Fusion;* **7**: No. 6, 199-205(May 1983).

The experimentally observed scaling laws for the electron temperature (Tsub(eo)) and energy containment time (Tsub(Ec)) with ohmic heating are derived from the two conditions: (a) the predicted critical Tsub(eo) for loss of poloidal equilibrium and (b) the proportionality of the ion heat flux to the Pynting vector. Condition (b) is inferred from the large fraction of ohmic power shown to be transferred to the ions.

32335 **Sizeable Raman scatter in laser plasma experiments.** Kruer, W.L. (Lawrence Livermore National Lab., CA (USA)). *Comments on Plasma Physics and Controlled Fusion;* **7**: No. 6, 215-223(May 1983).

Consistent with theoretical expectations, significant levels of Raman scattered light have been observed in some recent experiments with sizeable regions of underdense plasma. A brief overview of these results is given.

32336 **(ORNL-tr—5128) MHD stability of corrugated toroidal systems.** Mikhailovskii, A.B. (Oak Ridge National Lab., TN (USA); Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow. Inst. Atomnoj Ehnergii). 1983. Contract AC05-84OR21400. Translation of Report No. IAE—3720/6 (1983). 17p. NTIS, PC A02/MF A01; 1; GPO Dep. Order Number DE84012994.

Portions are illegible in microfiche products.

Current MHD-stability theory has at its disposal ample results of studies on toroidal systems with round magnetic surfaces and longitudinal-homogeneous magnetic field. A significant quality of the corresponding cycle of studies is allowance for the effects of the final plasma pressure. The concept of a closed system of the Drakon (long-equilibrium-configuration) type was recently formulated; it is a peculiar hybrid between toroidal and mirror traps. A typical characteristic of such a system is the longitudinal heterogeneity of the magnetic field. A longitudinal-nonhomogeneous, i.e., corrugated magnetic field is also characteristic for the projected INTOR tokamak. In connection with this, it is of interest to extend earlier results to systems with a longitudinal-nonhomogeneous magnetic field. The present paper can serve as a step in this direction. In it we obtain the Mercier stability criterion and the stability criterion of the g-mode for the said systems, with allowance for the effects quadratic with respect to plasma pressure.

32337 **(ORNL-tr—5127) Rotation of a tenuous plasma with high toroidal velocity in a tokamak.** Mikhailovskii, A.B. (Oak Ridge National Lab., TN (USA); Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow. Inst. Atomnoj Ehnergii). 1983. Contract AC05-84OR21400. Translation of IAEA—3716/7, 1983. 7p. NTIS, PC A02/MF A01; GPO Dep. Order Number DE84012990.

The question of plasma rotation in a tokamak is of interest for problems of neoclassical transport and also for instability theory. In recent years, the original inferences of the neoclassical transport theory have been placed in doubt in some papers, for the reason that the influence of poloidal rotation of the plasma on the transport was not taken into account previously. Earlier, we considered the rotation problem in the Pfirsch-Schleuter regime and demonstrated that even with an essentially radial electric field the velocity of poloidal rotation cannot substantially exceed the drift-temperature velocity of the ions. It follows from this that there is no basis for reconsideration of the neoclassical transport theory in the said regime. Now we are examining the problem of plasma rotation in the plateau and banana regimes and demonstrating that the velocity of poloidal rotation in these regimes is also of the order of the drift-temperature velocity of the ions and thus is immaterial for transport problems.

32338 **(ORNL-tr—5129) Electron distribution function for electron-cyclotron heating in tokamaks.** Alikaev, V.V.; Vdovin, V.L.; Kurchatov, I.V. (Oak Ridge National Lab., TN (USA); Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow. Inst. Atomnoj Ehnergii). 1983. Contract AC05-84OR21400. Translation of IAEA—3726/7, 1983. 17p. NTIS, PC A02/MF A01; 1; GPO Dep. Order Number DE84012984.

Portions are illegible in microfiche products.

The electron distribution function (EDF) in the case of an inhomogeneous magnetic field of tokamaks is found. The nonsteady-state Fokker-Planck equation is used; it takes into account electron-ion and electron-electron collisions, the heat losses of the electrons, and the electron-wave interaction. The electron-electron collisions are treated by using the complete Fokker-Planck collision operator. No linearizations are carried out in the problem, which permits considering high levels of injected powers, i.e., nonlinear heating regimes. The relation of the current density to the specific RF power 1/P is determined by this method within a broad range of phase velocities, energy lifetime tau/sub E/, and level of specific power injected P.

32339 (ORNL-tr—5115) Measurement of continuous x-radiation and determination of the energy distribution function of high-energy electrons from an ECR plasma. Bernhardi, K. (Bochum Univ. (Germany, F.R.). Abt. fuer Physik und Astronomie). 1980. Contract AC05-84OR21400. Translation source information not available . 71p. NTIS, PC A04/MF A01; 1; GPO Dep. Order Number DE84012865.

Portions are illegible in microfiche products; Thesis.

Investigations were made on the x-radiation emitted by a plasma. The methods applied here represent a further development of experimental and numerical methods used hitherto for determining the bremsstrahlung emitted by a plasma, and makes possible a more precise determination of the high-energy electron component of a plasma.

From Fusion Power Associates annual meeting and symposium on fusion power development --the next decade; Livermore, CA, USA (2 Apr 1984).

Portions are illegible in microfiche products.

A generic D-T burning magnetic fusion reactor model shows that within the constraints set by generic limitations it is possible for magnetic fusion to be a competitive source of electricity in the 21st century.

32341 (CONF-840614—50) Water-cooled liquid and solid breeder blanket concepts. Morgan, G.D.; Bowers, D.; Hellwig, T.; Ruester, D.; Sze, D.K.; Johnson, C.; Jung, J.; Liu, Y.Y.; Misra, B.; Gordon, J. (McDonnell Douglas Astronautics Co., St. Louis, MO (USA); Argonne National Lab., IL (USA); TRW, Inc., Redondo Beach, CA (USA)). 1984. Contract W-31-109-ENG-38. 5p. NTIS, PC A02/MF A01; GPO Dep. Order Number DE84011745.

From Annual meeting of the American Nuclear Society; New Orleans, LA, USA (3 Jun 1984).

Four concepts have been evaluated: (1) lithium oxide breeder (Li_2O) with and without beryllium neutron multiplier (Li_2O/H_2O, $Li_2O/H_2O/Be$); (2) ternary oxide ceramic breeder (γ-$LiAlO_2$) with beryllium neutron multiplier ($LiAlO_2/H_2O/Be$); (3) γ-$LiAlO_2$ with lead neutron multiplier ($LiAlO_2/H_2O/Pb$); and (4) 17Li-83Pb breeder without a separate neutron multiplier ($LiPb/H_2O$). Candidate structural materials are austenitic stainless steel (PCA), ferritic steel (HT-9), and vanadium alloy (V-15Cr-5Ti). The pressurized water coolant is assumed to be at 280°C inlet, 320°C outlet, and 15.2 MPa design pressure.

32342 (CONF-840614—51) Decision analysis methodology for the blanket comparison and selection study. Piet, S.J.; Baker, C.C.; Waganer, L.M. (EG and G Idaho, Inc., Idaho Falls (USA); Argonne National Lab., IL (USA); McDonnell Douglas Astronautics Co., St. Louis, MO (USA)). 1984. Contract W-31-109-ENG-38. 4p. NTIS, PC A02/MF A01; GPO Dep. Order Number DE84012091.

From Annual meeting of the American Nuclear Society; New Orleans, LA, USA (3 Jun 1984).

The decision analysis methodology has been a vital learning part of this selection study and represents a significant advance over the processes used in previous conceptual design studies. The identified factors in the four detailed evaluation areas have helped guide and focus the research efforts. The methodology should lead to the best possible final decisions whose basis will be clearer to the fusion community.

32343 (DOE/DP/40092—3) Measurements of high resolution spectra on the Omega laser at Rochester University. FY 82 annual report. Feldman, U. (Naval Research Lab., Washington, DC (USA). E.O. Hulburt Center for Space Research). 1984. Contract AI08-79DP40092. 5p. NTIS, PC A02/MF A01; GPO Dep. Order Number DE84012419.

A very high resolution grazing incidence spectrograph and vacuum chamber were attached to the Omega laser facility of the Laboratory for Laser Energetics (LLE), at the University of Rochester. The 3 m (88°) grazing incidence grating spectrograph can be used with either of two Bausch and Lomb gold replica gratings. One of the gratings has 1200 lines mm^{-1} blazed at 2° 35′, and although its wavelength coverage extends to 385 A, the spectrograph is most efficient between 8 A and 130 A. The spectral resolution near 100 A obtained with this configuration is better than 0.03 A. The second grating has 600 lines mm^{-1} blazed at 6° 2′.

32344 (DOE/DP/40092—4) Measurements of spatially resolved high resolution spectra of laser-produced plasmas. FY 83 annual report. Feldman, U. (Hulbert (E.O.) Center for Space Research, Washington, DC (USA)). 1984. Contract AI08-79DP40092. 10p. NTIS, PC A02/MF A01; GPO Dep. Order Number DE84012418.

A high resolution grazing incidence spectrograph, provided by the Naval Research Laboratory and the Goddard Space Flight Center, has been installed on the Omega laser facility of the Laboratory for Laser Energetics (LLE) at the University of Rochester. This 3 meter instrument, with a 1200 lines/mm grating blazed at 2° 35′, has produced extremely high quality spectra in the wavelength region 10 A to 100 A. Spectra have been obtained from glass microballoon targets that are coated with a variety of high-Z materials. Transitions from the Na-like and Ne-like ionization stages of Fe, Ni, Cu, and Kr have been identified.

32345 (DOE/DP/40092—5) Extreme ultraviolet spectra of highly ionized Ge, Kr and Mo emitted by imploding plasmas. Goldsmith, S.; Feldman, U.; Cohen, L.; Behring, W.E. (Maryland Univ., College Park (USA). Lab. for Plasma and Fusion Energy Studies; Naval Research Lab., Washington, DC (USA); National Aeronautics and Space Administration, Greenbelt, MD (USA). Goddard Space Flight Center). 1984. Contract AI08-79DP40092. 23p. NTIS, PC A02/MF A01; GPO Dep. Order Number DE84011752.

Spectra of highly ionized Ge, Kr and Mo in the spectral region of 10 to 80A were excited in laser-produced plasmas. The plasma was obtained by focusing the energy of the 24 laser beams of the University of Rochester Omega system on 0.4 mm diameter microballoon targets. The laser pulse duration was in the range of 0.87 to 1.09 ns, with total energy in the range of 1.8 to 2.2 kJ. The observed spectral lines include $n = 2$-2 transitions in the oxygen and fluorine isoelectronic sequences and $n = 3$ to 4 transitions in the sodium, magnesium and aluminum isoelectronic sequences. The present observations are compared with previous experimental and theoretical studies.

32346 (DOE/DP/40124—34) New model of Raman spectra in laser produced plasma. Simon, A.; Short, R.W. (Rochester Univ., NY (USA). Lab. for Laser Energetics). 30 Mar 1984. Contract AC08-80DP40124. 17p. (CONF-8405163—5). NTIS, PC A02/MF A01; 1; GPO Dep. Order Number DE84012487.

From Anomalous absorption conference; Charlottesville, VA, USA (6 May 1984).

Portions are illegible in microfiche products.

Some experimental observations of Raman scattering in laser produced plasma have been previously attributed to the onset of the convective Stimulated Raman Instability (SRS-C). This interpretation has had a number of difficulties, associated with the calculated threshold for onset of the SRS-C, the existence of gaps in the frequency spectrum near the incident frequency ω_0 and near $\omega_0/2$, and with the angular distribution. We now propose a new explanation based on ordinary incoherent Thompson scattering, with a greatly enhanced plasma line. Transient local reversed-slope velocity distributions in the underdense region can be produced by pulses of hot electrons arising from the two-plasmon (2ω/sub p/) or abso-

lute stimulated Raman instabilities (SRS-A) occurring near the quarter critical surface. A simple model yields the observed spectral gaps near ω_0 and near $\omega_0/2$. It also explains the correlation of onset of this scattering with onset of the SRS-A, its transient localization in frequency and time, and the weak azimuthal angular variation. The existence of upscattered light is also predicted.

32347 **(DOE/DP/40124—37) How useful are odd-integer half-harmonics.** Seka, W.; Goldman, L.M.; Tanaka,K.; Afeyan, B.; Simon, A.; Short, R. (Rochester Univ., NY (USA). Lab. for Laser Energetics). 17 Feb 1984. Contract AC08-80DP40124. 21p. (CONF-8405163—1). NTIS, PC A02/MF A01; 1; GPO Dep. Order Number DE84012392.

From Anomalous absorption conference; Charlottesville, VA, USA (6 May 1984).

Portions are illegible in microfiche products.

Odd-integer half-harmonic spectra from laser-produced plasmas have been reported since 1970. They have been clearly identified as related to parametric processes near n/sub c//4, most prominently the 2ω/sub p/ decay instability. In this paper we present arguments for the exercise of greater caution in the use of the 3ω/2 spectral splitting as a temperature diagnostic. We further discuss a model to explain the various features of the ω/2 spectra and we will show that one of its features is well suited as a temperature diagnostic. Furthermore, we will discuss fine structure observed in both the ω/2 and 3ω/2 spectra which appears to be related to secondary decay processes near n/sub c//4.

32348 **(DOE/DP/40135—1) Studies of CO_2 laser interactions with plasmas. Final technical report, 1 January 1981-30 March 1983.** Chen, F.F.; Joshi, C. (California Univ., Los Angeles (USA). Dept. of Electrical Engineering). Dec 1983. Contract AS08-81DP40135. 25p. NTIS, PC A02/MF A01; 1; GPO Dep. Order Number DE84012485.

Portions are illegible in microfiche products.

New results are reported on (1) Detection of ion waves in SBS by Thomson scattering, (2) Explanation of SBS saturation by ion trapping, (3) Interaction of SBS and SRC (theory), (4) Detection of SRS and explanation of threshold, (5) Excitation of plasma waves by optical mixing, (6) Use of Stark satellites as a new diagnostic, and (7) Observation of Rayleigh-Taylor instabilities in a theta pinch. Progress is reported on high-density experiments employing a solid target.

32349 **(DOE/DP/40185—1) Preliminary conceptual design of Siriu, A symmetric illumination, direct drive laser fusion reactor. Final report August 8, 1983-June 1, 1984.** Badger, B.; Attaya, H.A.; Bartel, T.J.; Corradini, M.L.; Engelstad, R.L.; Kulcinski, G.L.; Lovell, E.G.; Moses, G.A.; Peterson, R.R.; Sawan, M.E. (Wisconsin Univ., Madison (USA). Dept. of Nuclear Engineering; Rochester Univ., NY (USA). Lab. for Laser Energetics). Mar 1984. Contract AS08-83DP40185;AS08-83DP40186. 134p. (UWFDM—568). NTIS, PC A07/MF A01; 1; GPO Dep. Order Number DE84012907.

Portions are illegible in microfiche products.

A critical issues study of a symmetric illumination, direct drive laser fusion reactor called SIRIUS has been conducted. In particular, the uniformity requirements for direct drive targets have been assessed and it is shown that respectable gains (more than 60) could be obtained at modest (2MJ) KrF laser energies. Previous ICF cavity designs have been examined for use in a symmetric illumination geometry and features from several designs have been combined into a dry wall cavity design with a radius of 8 meters. Neutronic and photonic analysis shows that the present SIRIUS cavity design can breed sufficient tritium (breeding ratio = 1.17) even with 32 laser ports penetrating the cavity. However, it was found that there are a few critical issues that remain to be solved before a self-consistent reactor design could be initiated. Radiation damage to final optics, thermal performance of SiC tiles on the SIRIUS cavity wall, and performance of direct drive targets to nonuniformities in the beam are a few of the critical issues identified for future work.

32350 **(DOE/ER/03077—T1) Magnetohydrodynamic equilibrium and stability of stellarators.** Bauer, F.; Betancourt, O.; Garabedian, P. (New York Univ., NY (USA). Courant Inst. of Mathematical Sciences). 1984. Contract AC02-76ER03077. 201p. NTIS, PC A10/MF A01; 1; GPO Dep. Order Number DE84010731.

Portions are illegible in microfiche products.

A numerical method to study plasma confinement in a strong magnetic field is detailed. The emphasis is on confinement in toroidal geometry without two-dimensional symmetry. The mathematical model employed in the investigation is based on the partial differential equations of ideal magnetohydrodynamics. The principal application is to stellarators, currently important in the development of controlled thermonuclear fusion. The BETA computer code, along with a sample run, is included.

32351 **(DOE/ER/52061—2) START/TM: a study of start-up and fractional power operation of tandem mirror fusion reactors.** Conn, R.W.; Ghoniem, N.M.; Najmabadi, F. (eds.). (California Univ., Los Angeles (USA)). Jan 1984. Contract AT03-80ER52061. 409p. (UCLA/PPG—764). NTIS, PC A18/MF A01; 1; GPO Dep. Order Number DE84011477.

Portions are illegible in microfiche products. Original copy available until stock is exhausted.

Start-up, shutdown and fractional power operation are important parts of power reactor operation. Special requirements for operation during these phases often place design constraints on key subsystems and can influence the fundamental design approach. This report presents investigations of these problems for tandem mirror fusion reactors (TMR's) and is referred to as the START/TM study. As a basis for the work, the MARS conceptual tandem mirror reactor design is used as the general reactor model. An overall framework is developed for start-up and fractional power increases to full power, applicable to any fusion reactor. Five phases are identified that include initial commissioning, cold or hot shutdown, system testing and plasma initiation to a standby mode, staged power increases, and rated power operation. Both general and specific constraints associated with these phases are identified and a plasma shutdown scenario is developed.

32352 **(DOE/ET/53016—T3) Safety and deterministic failure analyses in high-beta D-D tokamak reactors.** Selcow, E.C. (Columbia Univ., New York (USA)). 1984. Contract AC02-76ET53016. 116p. (COO—2456/85). NTIS, PC A06/MF A01; GPO Dep. Order Number DE84012693.

Safety and deterministic failure analyses were performed to compare major component failure characteristics for different high-beta D-D tokamak reactors. The primary focus was on evaluating damage to the reactor facility. The analyses also considered potential hazards to the general public and operational personnel. Parametric designs of high-beta D-D tokamak reactors were developed, using WILDCAT as the reference. The size, and toroidal field strength were reduced, and the fusion power increased in an independent manner. These changes were expected to improve the economics of D-D tokamaks. Issues examined using these designs were radiation induced failurs, radiation safety, first wall failure from plasma disruptions, and toroidal field magnet coil failure.

32353 **(DOE/OR/21400—T7) Informal handbook for long-term exchangees in US-Japan cooperation program in fusion research.** Dresner, L. (Oak Ridge National Lab., TN (USA)). Dec 1983. Contract AC05-84OR21400. 50p. NTIS, PC A03/MF A01; 1; GPO Dep. Order Number DE84010982.

Portions are illegible in microfiche products.

This work explains the structure, the importance of, and the MHD analysis of tearing modes. The reduced MHD equations are shown to offer the ability to follow the time evolution of tearing modes, but at a high cost in computer resources. The quasilinear equations are shown to have the ability to model more complex geometric situations, but at the expense of the time dependence of the equations. The derivation of both methods are outlined.

32355 (INIS-SU—219, pp 3-11) **Design and technological peculiarities of the TM-4A installation.** Alekseev, A.G.; Bol'shakova, M.M.; Bondarchuk, Eh.N. (and others). 1982. (In Russian). NTIS (US Sales Only), PC A14/MF A01. Order Number TI84780219. (CONF-8106209—Vol.2).

From 2. all-union conference on engineering problems of thermonuclear reactors; Leningrad, USSR (23 Jun 1981).

A small experimental thermonuclear installation TM-4A specially designed for foreign nuclear research centres is described. The TM-4A is a Tokamak device intended for studying physical processes in a high-temperature plasma with the maximum electron concentration of about $5X10^{13}$ cm^{-3}, electron temperature of 700 eV, ion temperature of about 250 eV. The TM-4A installation has the following specifications: 0.53 m large torus radius, 0.1 m discharge chamber radius, 120 kA max. plasma current, 0.015 s plasma confinement duration, 120 s interval between discharges, 4T longitudinal magnetic field strength, $1x10^{-5}$ Torr max. pressure in discharge chamber. The main systems of the device: electromagnetic and vacuum systems, gas exhaustion and injection complexes, power supplies for magnet coils, diagnostics, data acquisition, processing and storage systems are described in brief.

32356 (INIS-SU—219, pp 12-16) **Complex studies of mockups of electric insulators of cryoresistive coils of the T-15 device electromagnet system.** Aksenov, O.E.; Gringof, V.G.; Il'in, G.V.; Lapenas, A.A.; Stepanov, A.N.; Ulmanis, U.A. NTIS (US Sales Only), PC A14/MF A01. Order Number TI84780219. (CONF-8106209—Vol.2).

From 2. all-union conference on engineering problems of thermonuclear reactors; Leningrad, USSR (23 Jun 1981).

The test results are presented for multilayer electrical insulation of coils in the T-15 thermonuclear device electromagnet system. The insulation is made ion the base of polyimide tape with adhesive coating. In the 77-93 K range the tape insulating strength is 35 MV/m, the dielectric loss tangent is less than 10^{-5}, dielectric permeability is 2.5, volume resistivity is more than 10^{6} Ohmxcm. The insulation has been tested for radiation effects in the IRT-2000 nuclear reactor. Different batches of insulation mockups 0.7 mm thick have been irradiated up to the integral fast neutron flux within the 10^{16}-$5x10^{18}$ neutr./cm^2 range (E >= 0.1 MeV), (J=10^{11}-10^{12} neutr./cm^2xs) at the corresponding temperature between 390 and 420 K. The given data on insulating strength point to a high radiation resistance of the multilayer polyimide insulation. To make sure finally that the developed insulation system meets the requirements of the operating conditions for thermonuclear device electromagnet system coils the device has been tested for operational life. On the basis of the test results a conclusion can be made that at the present development stage the multilayer polyimide insulation based on the adhesive tape meets to the utmost degree the requirements corresponding to the complicated operating conditions of the T-15 thermonuclear devices.

32358 (LA-UR—84-1075) **High density Z pinch as a small low-energy fusion device.** Hammel, J.E.; Scudder, D.W.; Shlachter, J.S. (Los Alamos National Lab., NM (USA)). 1984. Contract W-7405-ENG-36. 8p. (CONF-8403100—3). NTIS, PC A02/MF A01; 1; GPO Dep. Order Number DE84009992.

From Conference of Z-pinches for fusion; Alexandria, VA, USA (29 Mar 1984).

Portions are illegible in microfiche products.

The Los Alamos HDZP experiment is investigating a Z pinch in the density range 0.5 x 10^{20} to 10^{21} cm^3. In the present experiments the pinch is created in 1 to 4 atmospheres of hydrogen on the axis of a cylindrical chamber through the combination of laser beam preionization and high electric-field breakdown between electrodes separated by 5 cm. The low-divergence laser beam focused by a 2 meter focal length lens enters the chamber through a .64 cm hole in the ground electrode and is dumped in a cavity in the high-voltage electrode. The pinch electrodes are driven by a 1.6 ohm, 600 kV water-transmission line switched to the load through a multipoint water breakdown switch. The line is charged by a 12 kJ, 600 kV Marx generator. The 30 ns neodymium laser pulse is fired 50 to 100 ns prior to the arrival of the high-voltage pulse. The 500 kV pulse gives an initial current-rise-rate of 4 x 10^{12} A/s and a peak current of 300 kA in 200 ns.

32359 (LA-UR—84-1413) **Operational performance of the Antares alignment system.** Bender, S.C.; Appert, Q.D. (Los Alamos National Lab., NM (USA)). 1984. Contract W-7405-ENG-36. 8p. (CONF-8404124—7). NTIS, PC A02/MF A01; GPO Dep. Order Number DE84012659.

From SPIE technical symposium; Arlington, VA, USA (29 Apr 1984).

A review of the operational performance of the alignment system for the large Antares optical system is presented. The alignment of twenty-four optical channels consisting of two hundred optical elements is verified and established as required prior to each target shot for this CO_2 laser fusion test facility. The overall system design included features such as automatic operation, data base driven controls, self calibration, provisions for initial optical alignment set up, and system aided fault location. The system approach employed two alignment stations which sequentially viewed the 24 optical channels (sectors) and could be used for prealignments and calibrations. Closed-loop operations via the computer permit rapid mirror alignments. The performance of the applied techniques and devices is evaluated and compared to the required performance specifically from the standpoint of accuracy and shot rate. Overall system performance with verification by actual target shots is presented.

32360 (LBL—16979) **Negative ion formation due to hydrogen plasma surface interaction.** Leung, K.N.; Ehlers, K.W. (Lawrence Berkeley Lab., CA (USA)). May 1984. Contract AC03-76SF00098. 13p. (CONF-840520—5). NTIS, PC A02/MF A01. Order Number DE84012259.

From 6. international conference on plasma surface interactions in controlled fusion devices; Nagoya, Japan (14 May 1984).

Portions are illegible in microfiche products.

Negative ions can be produced by a desorption process when energetic positive hydrogen ions impinge on the surface of reactor walls. The relative yield of different negative ions generated from various surface materials (such as Mo, Pt, Pd, Rh, Cu, Ta, Au, C, TiC and stainless-steel) have been compared in a multicusp plasma source. The negative ions generated are self-extracted from the source, and are identified by a mass spectrometer. The total negative ion current is measured by a Faraday cup.

32361 (LBL—17624) **Intense non-relativistic cesium ion beam.** Lampel, M.C. (Lawrence Berkeley Lab., CA (USA)). Feb 1984. Contract AC03-76SF00098. 141p. NTIS, PC A07/MF A01; GPO Dep. Order Number DE84012575.

Thesis.

The Heavy Ion Fusion group at Lawrence Berkeley Laboratory has constructed the One Ampere Cesium Injector as a proof of principle source to supply an induction linac with a high charge density and high brightness ion beam. This is studied here. An electron beam probe was developed as the major diagnostic tool for

characterizing ion beam space charge. Electron beam probe data inversion is accomplished with the EBEAM code and a parametrically adjusted model radial charge distribution. The longitudinal charge distribution was not derived, although it is possible to do so. The radial charge distribution that is derived reveals an unexpected halo of trapped electrons surrounding the ion beam. A charge fluid theory of the effect of finite electron temperature on the focusing of neutralized ion beams (Nucl. Fus. 21, 529 (1981)) is applied to the problem of the Cesium beam final focus at the end of the injector. It is shown that the theory's predictions and assumptions are consistent with the experimental data, and that it accounts for the observed ion beam radius of ~ 5 cm, and the electron halo, including the determination of an electron Debye length of ~ 10 cm.

32362 **(PIFR—1100) High pressure tokamak fuel injector. Phase II. Final report, December 1977-December 1979.** Knowles, J.L. (Physics International Co., San Leandro, CA (USA)). Jan 1980. Contract AC03-77ET52011. 83p. NTIS, PC A05/MF A01; 1; GPO Dep. Order Number DE84012402.

Portions are illegible in microfiche products.

Tokamak fusion reactors will require a method for replenishment of spent fuel when operated in a steady-state mode. To establish the fueling requirements, a device capable of delivering a 1-mm-diameter hydrogen pellet at 2 km/s every 10 minutes is desired. This effort was to design, fabricate and test an experimental high-pressure fuel injector capable of producing pulsed liquid hydrogen jets of 2 km/s and 0.6 mm diameter. A device was tested in which hydrogen initially at pressures of up to 2 kbar and temperatures down to 35°K, was expanded through a nozzle 0.65 mm in diameter and 46 mm long. Jet velocities were as predicted. The jets, injected into variable H_2 pressure atmospheres, exhibited spiral patterns. Insufficient precision in the hardware causing nonsymmetric flow to the nozzle inlet is believed to have produced the spiral jets.

32363 **(PPPL—2099) Physical processes in spin polarized plasmas.** Kulsrud, R.M.; Valeo, E.J.; Cowley, S. (Princeton Univ., NJ (USA). Plasma Physics Lab.). May 1984. Contract AC02-76CH03073. 79p. NTIS, PC A05/MF A01; GPO Dep. Order Number DE84013078.

If the plasma in a nuclear fusion reactor is polarized, the nuclear reactions are modified in such a way as to enhance the reactor performance. We calculate in detail the modification of these nuclear reactions by different modes of polarization of the nuclear fuel. We also consider in detail the various physical processes that can lead to depolarization and show that they are by and large slow enough that a high degree of polarization can be maintained.

32364 **(PPPL—2101) Lower hybrid wave resonance cone detection via CO_2 laser scattering.** Wurden, G.A.; Wong, K.L.; Ono, M. (Princeton Univ., NJ (USA). Plasma Physics Lab.). Apr 1984. 66p. NTIS, PC A04/MF A01. Order Number DE84013098.

Portions are illegible in microfiche products. Original copy available until stock is exhausted.

Lower hybrid waves are studied in the Princeton ACT-I steady-state toroidal plasma device using a radially scanning CO_2 laser scattering system with both amplitude and phase sensitive detection techniques. Clearly defined resonance cones launched from external electrostatic antennas are seen to disappear as the plasma density is raised. Scaling of LHW laser signal with RF power in the presence of resonance cones shows nonlinearities associated with RF induced changes in the effective laser scattering volume. Absolute fluctuation level estimates suggest this occurs when e PHI/T/sub e/ ≧ 1. Wavefront curvature effects can cause a complete loss of resonance cone laser signals, even though probes indicate that cones are still present. Measurements of the wave k/sub perpendicular/-spectrum in the plasma show direct evidence for electron Landau filtering of the original wave k/sub parallel/-spectrum launched from the antenna at the plasma edge, and strong dependence on antenna phasing. Finally, frequency shifts and loss of the resonance cone signal are associated with high levels of plasma density edge turbulence.

32365 **(SAND—83-2614C) Characterization of impurities deposited on the PDX graphite rail limiter.** Doyle, B.L.; Wampler, W.R.; Dylla, H.F.; Owens, D.K.; Ulrickson, M.L. (Sandia National Labs., Albuquerque, NM (USA); Princeton Univ., NJ (USA). Plasma Physics Lab.). May 1984. Contract AC04-76DP00789. 16p. (CONF-840520—2). NTIS, PC AO2/MF A01; GPO Dep. Order Number DE84011684.

From 6. international conference on plasma surface interactions in controlled fusion devices; Nagoya, Japan (14 May 1984).

The surface contamination of a graphite rail limiter recently removed from the PDX tokamak has been characterized using ion-beam, electron-beam and x-ray analyses. The major impurities detected were Ti and Fe, with the Ti present in the form of a carbide. The distribution of these elements indicate that the erosion and deposition processes balance at a distance one cm from the apex of this limiter (the point of contact with the plasma) for Ti and at about two cm for Fe. The importance of TiC formation on the conditioning process is discussed.

32366 **(UCID—19874) Tritium-assisted fusion breeders.** Greenspan, E.; Miley, G.H. (Illinois Univ., Urbana (USA). Fusion Studies Lab.). Aug 1983. Contract W-7405-ENG-48. 94p. NTIS, PC A05/MF A01; 1; GPO Dep. Order Number DE84012142.

Portions are illegible in microfiche products. Original copy available until stock is exhausted.

This report undertakes a preliminary assessment of the prospects of tritium-assisted D-D fuel cycle fusion breeders. Two well documented fusion power reactor designs - the STARFIRE (D-T fuel cycle) and the WILDCAT (Cat-D fuel cycle) tokamaks - are converted into fusion breeders by replacing the fusion electric blankets with ^{233}U producing fission suppressed blankets; changing the Cat-D fuel cycle mode of operation by one of the several tritium-assisted D-D-based modes of operation considered; adjusting the reactor power level; and modifying the resulting plant cost to account for the design changes. Three sources of tritium are considered for assisting the D-D fuel cycle: tritium produced in the blankets from lithium or from ^3He and tritium produced in the client fission reactors. The D-D-based fusion breeders using tritium assistance are found to be the most promising economically, especially the Tritium Catalyzed Deuterium mode of operation in which the ^3He exhausted from the plasma is converted, by neutron capture in the blanket, into tritium which is in turn fed back to the plasma. The number of fission reactors of equal thermal power supported by Tritium Catalyzed Deuterium fusion breeders is about 50% higher than that of D-T fusion breeders, and the profitability is found to be slightly lower than that of the D-T fusion breeders.

32367 **(UCRL—15617) High field Nb_3Sn Axicell insert coils for the Mirror Fusion Test Facility-B (MFTF-B) axicell configuration. Final report.** Baldi, R.W.; Tatro, R.E.; Scanlan, R.M.; Agarwal, K.L.; Bailey, R.E.; Burgeson, J.E.; Kim, I.K.; Magnuson, G.D.; Mallett, B.D.; Pickering, J.L. (General Dynamics/Convair, San Diego, CA (USA)). Mar 1984. Contract W-7405-ENG-48. 272p. NTIS, PC A12/MF A01; 1; GPO Dep. Order Number DE84012685.

Portions are illegible in microfiche products.

Two 12-tesla superconducting insert coils are being designed by General Dynamics Convair Division for the axicell regions of MFTF-B for Lawrence Livermore National Laboratory. A major challenge of this project is to ensure that combined fabrication and operational strains induced in the conductor are within stringent limitations of the relatively brittle Nb_3Sn superconductor filaments. These coils are located in the axicell region of MFTF-B. They have a clear-bore diameter of 36.195cm (14.25 inches) and consist of 27 double pancakes (i.e., 54 pancakes per coil) would on an electrically insulated 304LN stainless steel/bobbin helium vessel. Each pancake has 57 turns separated by G-10CR insulation. The complete winding bundle has 4.6 million ampere-turns and uniform current density of 2007 A/cm^2. In conjunction with the other magnets in the system, they produce a 12-tesla central field and a 12.52-tesla peak field. A multifilamentary Nb_3Sn conductor was selected to meet these requirements. The conductor consists of a monolithic insert soldered into a copper stabilizer. Sufficient cross-sectional area and work-hardening of the copper stabilizer has been provided

for the conductor to self-react the electromagnetic Lorentz force induced hoop stresses with normal operational tensile strains less than 0.07 percent.

32368 **(UCRL—89204) Alternative power supply and dump resistor connections for similar, mutally coupled, superconducting coils.** Owen, E.W.; Shimer, D.W.; Wang, S.T. (Lawrence Livermore National Lab., CA (USA)). 30 Nov 1983. Contract W-7405-ENG-48. 6p. (CONF-831203—141). NTIS, PC A02/MF A01; 1; GPO Dep. Order Number DE84012602.

From 10. symposium on fusion engineering; Philadelphia, PA, USA (5 Dec 1983).

Portions are illegible in microfiche products.

Alternative methods of connecting similar mutually coupled coils to their power supplies and dump resistors are investigated. The circuits are evaluated for both operating and fault conditions. The factors considered are the voltage to ground during a dump, short circuits, open circuits, quenches, and failure of the protection system to detect a quench. Of particular interest are the currents induced in coils that remain superconducting when one or more coils quench. The alternative connections include combined power supplies, individual dump resistors, combined resistors and series and parallel dump resistors. A new circuit that contains coupling resistors is proposed. The coupling resistors do not affect normal fast dumps but reduce the peak induced currents while also reducing the energy rating of the dump resistors. Another novel circuit, the series circuit with diodes, is discussed. The MFTF-B central-cell solenoids are used as an example.

32369 **(UCRL—89205) Switching transients in a superconducting coil.** Owen, E.W.; Shimer, D.W. (Lawrence Livermore National Lab., CA (USA)). 18 Nov 1983. Contract W-7405-ENG-48. 7p. (CONF-831203—156). NTIS, PC A02/MF A01; 1; GPO Dep. Order Number DE84012592.

From 10. symposium on fusion engineering; Philadelphia, PA, USA (5 Dec 1983).

Portions are illegible in microfiche products.

A study is made of the transients caused by the fast dump of large superconducting coils. Theoretical analysis, computer simulation, and actual measurements are used. Theoretical analysis can only be applied to the simplest of models. In the computer simulations two models are used, one in which the coil is divided into ten segments and another in which a single coil is employed. The circuit breaker that interrupts the current to the power supply, causing a fast dump, is represented by a time and current dependent conductance. Actual measurements are limited to measurements made incidental to performance tests on the MFTF Yin-yang coils. It is found that the breaker opening time is the critical factor in determining the size and shape of the transient. Instantaneous opening of the breaker causes a lightly damped transient with large amplitude voltages to ground. Increasing the opening time causes the transient to become a monopulse of decreasing amplitude. The voltages at the external terminals are determined by the parameters of the external circuit. For fast opening times the frequency depends on the dump resistor inductance, the circuit capacitance, and the amplitude on the coil current. For slower openings the dump resistor inductance and the current determine the amplitude of the voltage to ground at the terminals. Voltages to ground are less in the interior of the coil, where transients related to the parameters of the coil itself are observed.

32370 **(UCRL—89206) Design lessons from using programmable controllers in the MFTF-B personnel safety and interlocks system.** Branum, J.D. (Lawrence Livermore National Lab., CA (USA)). 29 Nov 1983. Contract W-7405-ENG-48. 5p. (CONF-831203—148). NTIS, PC A02/MF A01; GPO Dep. Order Number DE84012596.

From 10. symposium on fusion engineering; Philadelphia, PA, USA (5 Dec 1983).

Applying programmable controllers in critical applications such as personnel safety and interlocks systems requires special considerations in the design of both hardware and software. All modern programmable controller systems feature extensive internal diagnostic capabilities to protect against problems such as program memory errors; however most, if not all present designs lack an intrinsic capability for detecting and countering failures on the field-side of their I/O modules. Many of the most common styles of I/O modules can also introduce potentially dangerous sneak circuits, even without component failure. This paper presents the most significant lessons learned to date in the design of the MFTF-B Personnel Safety and Interlocks System, which utilizes two non-redundant programmable controllers with over 800 I/O points each. Specific problems recognized during the design process as well as those discovered during initial testing and operation are discussed along with their specific solutions in hardware and software.

32371 **(UCRL—89207) Improvement in MFTF data base system response times.** Lang, N.C.; Nelson, B.C. (Lawrence Livermore National Lab., CA (USA)). 28 Nov 1983. Contract W-7405-ENG-48. 4p. (CONF-831203—146). NTIS, PC A02/MF A01; 1; GPO Dep. Order Number DE84012590.

From 10. symposium on fusion engineering; Philadelphia, PA, USA (5 Dec 1983).

Portions are illegible in microfiche products.

The Supervisory Control and Diagnostic System for the Mirror Fusion Test Facility (MFTF) has been designed as an event driven system. To this end we have designed a data base notification facility in which a task can request that it be loaded and started whenever an element in the data base is changed beyond some user defined range. Our initial implementation of the notify facility exhibited marginal response times whenever a data base table with a large number of outstanding notifies was written into. In this paper we discuss the sources of the slow response and describe in detail a new structure for the list of notifies which minimizes search time resulting in significantly faster response.

32372 **(UCRL—89220) New kind of user interface for controlling MFTF diagnostics.** Preckshot, G.G.; Saroyan, R.A.; Mead, J.E. (Lawrence Livermore National Lab., CA (USA)). 29 Nov 1983. Contract W-7405-ENG-48. 5p. (CONF-831203—143). NTIS, PC A02/MF A01; 1; GPO Dep. Order Number DE84012604.

From 10. symposium on fusion engineering; Philadelphia, PA, USA (5 Dec 1983).

Portions are illegible in microfiche products.

The Mirror Fusion Test Facility (MFTF) at Lawrence Livermore National Laboratory is faced with the problem of controlling a multitude of plasma diagnostics instruments from a central, multiprocessor computer facility. A 16-bit microprocessor-based workstation allows each physicist entree into the central multiprocessor, which consists of nine Perkin-Elmer 32-bit minicomputers. The workstation provides the user interface to the larger system, with display graphics, windowing, and a physics notebook. Controlling a diagnostic is now equivalent to making entries into a traditional physics notebook.

32373 **(UCRL—89223) Computer model of the MFTF-B neutral beam Accel dc power supply.** Wilson, J.H. (Lawrence Livermore National Lab., CA (USA)). 30 Nov 1983. Contract W-7405-ENG-48. 7p. (CONF-831203—144). NTIS, PC A02/MF A01; 1; GPO Dep. Order Number DE84012598.

From 10. symposium on fusion engineering; Philadelphia, PA, USA (5 Dec 1983).

Portions are illegible in microfiche products.

Using the SCEPTRE circuit modeling code, a computer model was developed for the MFTF Neutral Beam Power Supply System (NBPSS) Accel dc Power Supply (ADCPS). The ADCPS provides 90 kV, 88 A, to the Accel Modulator. Because of the complex behavior of the power supply, use of the computer model is necessary to adequately understand the power supply's behavior over a wide range of load conditions and faults. The model developed includes all the circuit components and parameters, and some of the stray values. The model has been well validated for transients with times on the order of milliseconds, and with one exception, for steady-state operation. When using a circuit modeling code for a system with a wide range of time constants, it can become impossible to obtain good solutions for all time ranges at once. The present model concentrates on the millisecond-range transients because the compensating capacitor bank tends to isolate the power supply from the load for faster transients. Attempts to include stray circuit elements with time constants in the microsecond and shorter range have had little success because of huge increases in comput-

ing time that result. The model has been successfully extended to include the accel modulator.

32374 **(UCRL—89267) Startup experience with the MFTF-B ECRH 100 kV dc power supply.** Bishop, S.R.; Goodman, R.A.; Wilson, J.H. (Lawrence Livermore National Lab., CA (USA)). 30 Nov 1983. Contract W-7405-ENG-48. 7p. (CONF-831203—153). NTIS, PC A02/MF A01; 1; GPO Dep. Order Number DE84012600.

From 10. symposium on fusion engineering; Philadelphia, PA, USA (5 Dec 1983).

One of the 24 Accel dc Power Supplies (ADCPS) originally intended for the Mirror Fusion Test Facility (MFTF-B) Neutral Beam Power Supply (NBPS) System has been converted to provide negative polarity output at 90 kV with a load current of 64 A dc. The load duty cycle is a pulse of 30-seconds duration with a pulse repetition period of five minutes. A new control system has been built which will serve as a prototype for the MFTF-B ADCPS controls, and a test setup was built which will be used to test the ADCPS. The Electron Cyclotron Resonance Heating (ECRH) dc Power Supply (DCPS) has been tested under both no-load and dummy-load conditions, under remote control, without notable problems. Test results indicate that the power supply should be reliable and safe to operate, and will meet the load duty requirements.

32375 **(UCRL—89268) Noise filtering algorithm for the MFTF-B computer based control system.** Minor, E.G. (Lawrence Livermore National Lab., CA (USA)). 30 Nov 1983. Contract W-7405-ENG-48. 6p. (CONF-831203—147). NTIS, PC A02/MF A01; 1; GPO Dep. Order Number DE84012589.

From 10. symposium on fusion engineering; Philadelphia, PA, USA (5 Dec 1983).

Portions are illegible in microfiche products.

An algorithm to reduce the message traffic in the MFTF-B computer based control system is described. The algorithm filters analog inputs to the control system. Its purpose is to distinguish between changes in the inputs due to noise and changes due to significant variations in the quantity being monitored. Noise is rejected while significant changes are reported to the control system data base, thus keeping the data base updated with a minimum number of messages. The algorithm is memory efficient, requiring only four bytes of storage per analog channel, and computationally simple, requiring only subtraction and comparison. Quantitative analysis of the algorithm is presented for the case of additive Gaussian noise. It is shown that the algorithm is stable and tends toward the mean value of the monitored variable over a wide variety of additive noise distributions.

32376 **(UCRL—89281) Sparking protection for MFTF-B neutral beam power supplies.** Cummings, D.B. (Lawrence Livermore National Lab., CA (USA)). 30 Nov 1983. Contract W-7405-ENG-48. 6p. (CONF-831203—154). NTIS, PC A02/MF A01; 1; GPO Dep. Order Number DE84012597.

This paper describes the upgrade of MFTF-B Neutral Beam Power Supplies for sparking protection. High performance ion sources spark repeatedly so ion source power supplies must be insensitive to sparking. The hot deck houses the series tetrode, arc and filament supplies, and controls. Hot deck shielding has been upgraded and a continuous shield around the arc, filament, gradient grid, and control cables now extends from the hot deck, through the core snubber, to the source. The shield carries accelerating current and connects only to the source. Shielded source cables go through an outer duct which now connects to a ground plane under the hot deck. This hybrid transmission line is a low inductance path for sparks discharging the stray capacitance of the hot deck and isolation transformers, reducing coupling to building steel. Parallel dc current return cables inside the duct lower inductance to reduce inductive turn-off transients. MOVs to ground further limit surges in the remote power supply return. Single point grounding is at the source. No control or rectifier components have been damaged nor are there any known malfunctions due to sparking up to 80 kV output.

32377 **(UCRL—89282) Stand alone computer system to aid the development of Mirror Fusion Test Facility rf heating systems.** Thomas, R.A. (Lawrence Livermore National Lab., CA (USA)). 1 Dec 1983. The Mirror Fusion Test Facility (MFTF-B) control system architecture requires the Supervisory Control and Diagnostic System (SCDS) to communicate with a LSI-11 Local Control Computer (LCC) that in turn communicates via a fiber optic link to CAMAC based control hardware located near the machine. In many cases, the control hardware is very complex and requires a sizable development effort prior to being integrated into the overall MFTF-B system. One such effort was the development of the Electron Cyclotron Resonance Heating (ECRH) system. It became clear that a stand alone computer system was needed to simulate the functions of SCDS. This paper describes the hardware and software necessary to implement the SCDS Simulation Computer (SSC). It consists of a Digital Equipment Corporation (DEC) LSI-11 computer and a Winchester/Floppy disk operating under the DEC RT-11 operating system. All application software for MFTF-B is programmed in PASCAL, which allowed us to adapt procedures originally written for SCDS to the SSC. This nearly identical software interface means that software written during the equipment development will be useful to the SCDS programmers in the integration phase.

32378 **(UCRL—89403) Overview of the data acquisition and control system for plasma diagnostics on MFTF-B.** Wyman, R.H.; Deadrick, F.J.; Lau, N.H.; Nelson, B.C.; Preckshot, G.G.; Throop, A.L. (Lawrence Livermore National Lab., CA (USA)). 18 Nov 1983. Contract W-7405-ENG-48. 7p. (CONF-831203—155). NTIS, PC A02/MF A01; 1; GPO Dep. Order Number DE84012595.

From 10. symposium on fusion engineering; Philadelphia, PA, USA (5 Dec 1983).

Portions are illegible in microfiche products.

For MFTF-B, the plasma diagnostics system is expected to grow from a collection of 12 types of diagnostic instruments, initially producing about 1 Megabyte of data per shot, to an expanded set of 22 diagnostics producing about 8 Megabytes of data per shot. To control these diagnostics and acquire and process the data, a system design has been developed which uses an architecture similar to the supervisory/local-control computer system which is used to control other MFTF-B subsystems. This paper presents an overview of the hardware and software that will control and acquire data from the plasma diagnostics system. Data flow paths from the instruments, through processing, and into final archived storage will be described. A discussion of anticipated data rates, including anticipated software overhead at various points of the system, is included, along with the identification of possible bottlenecks. A methodology for processing of the data is described, along with the approach to handle the planned growth in the diagnostic system. Motivations are presented for various design choices which have been made.

32379 **(UCRL—90161) DT-burning upgrade to MFTF-B.** Thomassen, K.I.; Logan, B.G.; Doggett, J.N.; Coensgen, F.H. (Lawrence Livermore National Lab., CA (USA)). 7 May 1984. Contract W-7405-ENG-48. 26p. (CONF-840520—6). NTIS, PC A03/MF A01; 1; GPO Dep. Order Number DE84012612.

From 6. international conference on plasma surface interactions in controlled fusion devices; Nagoya, Japan (14 May 1984).

Portions are illegible in microfiche products.

To improve MFTF-B, one must raise the ion energy and the electrostatic confining potential. This requires higher beam energy (200 keV in this case) and, to preserve end-plug adiabaticity and hold higher plasma density in the central cell, a higher level of magnetic field. In the MFTF Upgrade we also want to incorporate the new end plug configuration first invented for the MARS reactor. This new magnet design is compared with the present MFTF-B magnet set. The differences include the addition of a pair of recircularizing coils on the ends to be used in conjunction with the

end region pumping and direct converter schemes, the use of a yin-yang pair rather than a baseball-type coil in the transition, and the elimination of the axicell in favor of the simple choke coil. Also, as noted earlier, an axisymmetric mirror cell is imbedded in the central cell.

32380 **(UCRL—90334) Soft x-ray laser experiments at Novette Laser Facility.** Matthews, D.; Hagelstein, P.; Rosen, M.; Kauffman, R.; Lee, R.; Wang, C.; Medecki, H.; Campbell, M.; Ceglio, N.; Leipelt, G. Order Number DE84012594.

From 2. topical meeting on laser techniques in the extreme ultraviolet; Boulder, CO, USA (5 Mar 1984).

Portions are illegible in microfiche products.

We discuss the results of and future plans for experiments to study the possibility of producing an x-ray laser. The schemes we have investigated are all pumped by the Novette Laser, operated at short pulse (tau/sub L/ $\sim$ 100 psec) and an incident wavelength of λ /sub L/ $\sim$ 0.53 μm. We have studied the possibility of lasing at 53.6, 68.0 to 72.0, 119.0, and 153.0 eV, using the inversion methods of resonant photo-excitation, collisional excitation, and three-body recombination.

32381 **(UCRL—90335) Diagnostics for an XUV/soft x-ray laser.** Kauffman, R.L.; Matthews, D.L.; Ceglio, N.; Medecki, H. (Lawrence Livermore National Lab., CA (USA)). 03 Mar 1984. Contract W-7405-ENG-48. 9p. (CONF-840387—9). NTIS, PC A02/MF A01; 1; GPO Dep. Order Number DE84012593.

From 2. topical meeting on laser techniques in the extreme ultraviolet; Boulder, CO, USA (5 Mar 1984).

Portions are illegible in microfiche products.

We have begun investigating the production of an XUV/soft x-ray laser, using our high-powered glass lasers as drivers. A major diagnostic for lasing is the measure of the absolute power produced in the lasing line. I have developed a spectrograph to time-resolved lasing lines in the energy range from 50 eV to greater than 200 eV. the spectrograph combines a transmission grating and x-ray streak camera to produce a flat field instrument. A cylindrical mirror is used in front of the grating to image the source and act as a collecting optic. The efficiency of the components is calibrated so that absolute intensities can be measured. I will compare the performance of this instrument with reflection grating systems. I will also discuss planned improvements to the system which should increase total throughput, image quality, and resolving power.

32382 **(UCRL—90758) Economic potential of inertial fusion.** Nuckolls, J.H. (Lawrence Livermore National Lab., CA (USA)). Apr 1984. Contract W-7405-ENG-48. 49p. (CONF-840476—2). NTIS, PC A03/MF A01; 1; GPO Dep. Order Number DE84012739.

From Fusion Power Associates annual meeting and symposium on fusion power development --the next decade; Livermore, CA, USA (2 Apr 1984).

Portions are illegible in microfiche products.

Beyond the achievement of scientific feasibility, the key question for fusion energy is: does it have the economic potential to be significantly cheaper than fission and coal energy. If fusion has this high economic potential then there are compelling commercial and geopolitical incentives to accelerate the pace of the fusion program in the near term, and to install a global fusion energy system in the long term. Without this high economic potential, fusion's success depends on the failure of all alternatives, and there is no real incentive to accelerate the program. If my conjectures on the economic potential of inertial fusion are approximately correct, then inertial fusion energy's ultimate costs may be only half to two-thirds those of advanced fission and coal energy systems. Relative cost escalation is not assumed and could increase this advantage. Both magnetic and inertial approaches to fusion potentially have a two-fold economic advantage which derives from two fundamental properties: negligible fuel costs and high quality energy which makes possible more efficient generation of electricity. The wining approach to fusion may excel in three areas: electrical generating efficiency, minimum material costs, and adaptability to manufacture in automated factories. The winning approach must also rate highly in environmental potential, safety, availability factor, lifetime, small O and M costs, and no possibility of utility-disabling accidents.

32383 (SAND—84-0169-Vol.8-No.1, pp 24-32) **Hydrogen effects in fusion reactor walls.** May 1984. NTIS, PC A03/MF A01. Order Number TI84012270. Contract AC04-76DP00789.

In Sandia technology. Vol. 8, No. 1.

Hydrogen isotopes escape from magnetically confined fusion plasmas and iteract with materials in reactor walls - a crucial problem in fusion reactors. Our studies of these interactions lead to predictive models for reactor-wall design.

32384 **Collisional end loss of electrostatically confined particles in a magnetic mirror field.** Najmabadi, F.; Conn, R.W. (California Univ., Los Angeles (USA). School of Engineering and Applied Science); Cohen, R.H. (California Univ., Livermore (USA). Lawrence Livermore National Lab.). *Nuclear Fusion;* **24**: No. 1, 75-84(Jan 1984).

The basic problem of collisional end loss of electrostatically confined particles in a magnetic mirror field with a multi-species background plasma is considered. An analytical procedure similar to, but more accurate than, that of Pastukhov is employed. Using the method of images, in the limit of large mirror ratio and modest confining potential, a class of approximate solutions, set containing Fsub(a), to the corresponding linearized Fokker-Planck equation is found, which is characterized by some adjustable parameters. These parameters are then chosen so that the surface Fsub(a)=0 approximately matches the true loss boundary. An analytical estimate of the error in the loss rate due to this matching procedure is made. A new expression for the loss rate is developed and compared with the results from Fokker-Planck codes, and remarkable agreement over a wide range of mirror ratios and confining potentials is found.

32385 **(ORNL-tr—5118) Calculation of ballistic focusing of ion beams.** Astrelin, V.T.; Syresin, E.M. (Oak Ridge National Lab., TN (USA); AN SSSR, Novosibirsk. Inst. Yadernoj Fiziki). 1984. Contract AC05-84OR21400. Translation of Preprint 83-41. 21p. NTIS, PC A02/MF A01; 1; GPO Dep. Order Number DE84012870.

Portions are illegible in microfiche products.

The motion of ions passing from the homogeneous magnetic field into a conical one is treated analytically in paraxial approximation. Further ions transform into neutral particles at the recharging target which is placed in the conical area of field. The optimal conditions for maximum compression of the beams of neutral particles are investigated. An influence of the initial angular spread on the beam compression is analysed. The computation results together with the those of analytical treatment are presented.

32386 **Application of catastrophe theory to a point model for bumpy torus with neoclassical non-resonant electrons.** Punjabi, A.; Vahala, G. (College of William and Mary, Williamsburg, VA (USA). Dept. of Physics). *Journal of Plasma Physics;* **30**: 389-421(Dec 1983).

The point model for the toroidal core plasma in the ELMO Bumpy Torus (with neoclassical non-resonant electrons) is examined in the light of catastrophe theory. Even though the point model equations do not constitute a gradient dynamic system, the equilibrium surfaces are similar to those of the canonical cusp catastrophe. The point model is then extended to incorporate ion cyclotron resonance heating. A detailed parametric study of the equilibria is presented. Further, the nonlinear time evolution of these equilibria is studied, and it is observed that the point model obeys the delay convention (and hence hysteresis) and shows catastrophes at the fold edges of the equilibrium surfaces. Tentative applications are made to experimental results.

32387 **Ion sources for plasma filled ion diodes.** Vandevender, J.P.; Hoffman, J.M.; Mills, G.S.; Mendel, E.W. (Sandia National Labs., Albuquerque, NM (USA)). *Comments on Plasma Physics and Controlled Fusion;* **7**: No. 6, 207-214(May 1983).

Inertial confinement fusion with intense particle beam drivers may be possible with one or more megajoules of ion beam energy at power densities as low as 20 TW/cm² on target. However, the targets are less risky and are simpler with higher power density drivers at the same energy. The AMPFION, plasma filled ion diode offers the possibility of providing a 200 TW/cm² driver given a suitable plasma ion source. The plasma requirements and the performance of a new carbon plasma source are described. In addition, a concept for producing an improved Li^+ ion source through the resonant absorption of laser light is discussed.

32388 **Strong ion coupling effects at high density of inertial confinement fusion plasmas.** Golden, K.I. (Northeastern Univ., Boston, MA (USA). Dept. of Electrical Engineering). *Laser and Particle Beams;* 1: 3-9(Feb 1983).

Strong ion coupling could play an important role in laser - and particle beam - compressed ICF layered targets. Some light is shed on these effects by examining structure and pair correlation functions calculated from some of the well known strongly coupled plasma approximation schemes.

32389 **Theoretical and experimental progress in tokamak plasma confinement.** Sigmar, D.J. (Oak Ridge National Lab., TN (USA)). pp 18-57 of Information meeting. Current aspects of fusion research. Vienna, Austria; Verlag der Oesterreichischen Akademie der Wissenschaften (1983). (In German)(CONF-8303153—).

From Current aspects of fusion engineering information meeting; Vienna, Austria (3 Mar 1983).

A review is given in six chapters on current trends and achievments of tokamak research in USA. 1. Introduction 2. A recapitulation of the tokamak principle. 3. New records for beta; a new operational mode (H-mode) in Divertor plasmas. 4. Dependence of achievable poloidal βsub(E) as well as of the energy confinement time tau sub(E) on the heating power as resulting from a) tangential neutral particle heating in the ISX-B tokamak, b) normal neutral particle heating in the TDX tokamak. 5. Report on direct current drive through Lower Hybrid Resonance radio frequency in Alcator C and in PLT. 6. First operation of TFTR D-T experiment in Princeton.

32390 **(ORNL-tr—5126) Pulsed high-current source of negatively charged hydrogen ions.** Bel'chenko, Yu.I.; Dimov, G.I. (Oak Ridge National Lab., TN (USA); AN SSSR, Novosibirsk). 1983. Contract AC05-84OR21400. Translation of Preprint No. 83-109. 20p. NTIS, PC A02/MF A01; GPO Dep. Order Number DE84012989.

A high current cellular source (HCCS) is described. The high-current glow discharge of the HCCS with open electron drift is localized in the extended gap between the emitting surface of the cathode and the anode cover with emission apertures. Operational parameters of the H^- source are described.

99 GENERAL AND MISCELLANEOUS

32391 **(DOE/RG/10347—T3) Annotated archive of communication references: empirical and theoretical works.** Crano, W.D.; Ludwig, S.; Selnow, G.W. (eds.). (Michigan State Univ., East Lansing (USA). 32392 **(ANAEM-FR—82) Progress report 1982.** (Ankara Nuclear Research and Training Center (Turkey)). 1982. 205p. (In Turkish, English). NTIS (US Sales Only), PC A10/MF A01. Order Number DE84701750.

Presented are the research works carried out in 1982 in Physics, Chemistry, Nuclear Agriculture, Health Physics, Electronics Division and Nuclear Information Group of Ankara Nuclear Research and Training Center.

32393 **(BLG—558) Annual report 1982.** (Centre d'Etude de l'Energie Nucleaire, Mol (Belgium)). 1982. 247p. NTIS (US Sales Only), PC A11/MF A01. Order Number DE84701751.

This report of the Centre d'Etude de l'Energie Nucleaire - Studiecentrum voor Kernenergie gives a survey of the scientific and technical work done in 1982. The research areas are: 1. The sodium-cooled fast reactor and namely the mixed oxide fuels, the carbide fuel, the materials development, the reprocessing, the fast reactor physics, the safety and instrumentation and the sodium technology. 2. The gas-cooled reactors as gas cooled fast and high temperature reactors. 3. The light water reactors, namely the BR3 reactor, the light water reactor fuels and the plutonium recycling. 4. The applied nuclear research, waste conditioning and disposal as the safeguards, the fusion research and the lithium technology. 5. The basis and exploratory research namely the materials science and the nuclear physics and finally 6. Non-nuclear research and development such as the air pollution, the pollution abatement and waste handling, the fuel cells and applied electrochemistry.

32394 **(DOE/IG—0008/6) Semiannual report - 1st half FY 1984, October 1, 1983-March 31, 1984.** Richards, J.R. (Department of Energy, Washington, DC (USA). Office of Inspector General). 31 May 1984. 56p. TIC, PO Bx 62, Oak Ridge, TN 37831. Order Number TI84012394.

The Office of Inspector General has made steady progress during this reporting period in fulfilling its mandate to prevent and detect fraud and abuse and to promote efficiency and economy in the Department of Energy's (DOE) programs and operations. The Office of Audits issued four public reports and 71 other reports which primarily resulted from our reviews of departmental contracts. Based on our report recommendations, DOE managers have made commitments to more effectively use over $8 million. An additional $6.3 million of contractor costs that were questioned in audit reports were recovered by the Department during the six months ending March 31, 1984. The Office of Inspections issued 13 reports during the first half of Fiscal Year 1984. Issues addressed ranged from an evaluation of the Department's capability to conduct an emergency drawdown of crude oil inventories at the Strategic Petroleum Reserve Bryan Mound site to critical issues raised by concerned citizens relative to the Department's policies on the control of radioactive waste. In addition, the Office of Inspections continued to monitor a 1982 report wherein we questioned the estimated cost of construction for Phase I of the Defense Waste Processing Facility at Aiken, South Carolina. After a recommended review of the estimates was made, the Department's Acquisition Executive made a decision supporting the reduction of the estimated cost of the facility from $910 million to $870 million. During this reporting period, 11 Office of Investigations cases were referred to prosecutive authorities and other investigative agencies. One of the cases was accepted for prosecution. During the reporting period we had 30 indictments and 29 convictions. We also recovered $38,804. Three hundred twenty-six cases remained open on March 31, 1984.

32395 **(DOE/TIC—3398-Suppl.1) DOE patents available for licensing. A bibliography for the period 1966-1974. Supplement 1.** Thoeming, G.H. (Department of Energy, Oak Ridge, TN (USA). Technical Information Center). Oct 1983. 63p. NTIS, $9.25. Order Number DE83017340.

Abstracts and indexes are provided for 510 DOE patents or patent applications concerning any aspect of energy production, conservation, and utilization. The entries are arranged by subject category as shown in the table of contents. The bibliography covers the period from 1966 through 1974.

32396 **(EGG-M—01284) Practical writing and editing techniques.** Hallinan, E.J. (EG and G Idaho, Inc., Idaho Falls (USA)). 1984. Contract AC07-76ID01570. 5p. (CONF-840497—12). NTIS, PC A02/MF A01; GPO Dep. Order Number DE84012642.

From 31. international technical communication conference; Seattle, WA, USA (29 Apr 1984).

Technical writing and editing involve more than a knowledge of style and format. Often a draft must be prepared from existing documents and edited for content as well as style. A practical approach to writing and editing tasks includes increasing writer/editor exposure with cognizant personnel, researching source and legal documents, participating in project meetings, and reviewing the document by checking for inconsistencies and selectively questioning the contents. This approach will help the writer/editor prepare a reasonably accurate, politically acceptable document with a minimum of supervision.

32397 **(EGG-M—01784) Terminal oversight: the editor and the word processor.** Garber, R. (EG and G Idaho, Inc., Idaho Falls (USA)). 1984. Contract AC07-76ID01570. 7p. (CONF-840497—11). NTIS, PC A02/MF A01; 1; GPO Dep. Order Number DE84012648.

From 31. international technical communication conference; Seattle, WA, USA (29 Apr 1984).

Portions are illegible in microfiche products.

The many editorial and administrative functions unique to a technical editor are evaluated relative to word processors. Editing functions are categorized into five major units, each linked to an administrative task.

32398 (INIS-mf—8927, pp 29-35) **Building of new Institute for Research, Production and Application of Radioisotopes in Prague 10.** Chorvat, K. 1981. (In Russian). NTIS (US Sales Only), PC A05/MF A01. Order Number TI84780240.

In 60 years of the Institute for Research, Production and Application of Radioisotopes 1919-1979.

Project construction is described of the new building of the Institute in Prague-Malesice. Data on some of the buildings, their purpose and layout are given.

32399 **(RISO-R—491) Physics Department annual progress report 1 January - 31 December 1982.** (Risoe National Lab., Roskilde (Denmark)). Sep 1983. 73p. NTIS (US Sales Only), PC A04/MF A01. Order Number DE84701752.

Research in the Physics Department at Risoe National Laboratory covers three main fields: condensed matter physics, plasma physics and meteorology. The report is a progress report describing the principal activities in these fields for the period from 1 January to 31 December 1982. The condensed matter physics research is predominantly experimental utilising diffraction of neutrons, X-rays, and synchrotron X-ray radiation. The research topics range from studies of structure, excitations and phase transitions in model systems to studies of ion transport, texture and recrystallization kinetics with a more applied nature. The plasma physics research is partly experimental and partly theoretical. A study of pellet-plasma interaction is of applied nature and aimed at assessing the possibilities of refuelling a fusion reactor by shooting deuterium-tritium pellets into the plasma. A study of the fundamental physics of plasmas deals with investigations of wave propagation properties, instabilities, solitons, turbulence, etc. The research and applied work within meteorology lies within micrometereology and the subjects range from surface energy balance studies, over studies of the general structure of atmospheric coherence and boundary layer response to change in surface elevation, to specific studies of turbulent dispersion and deposition of airborne material. As part of the applied work within meteorology and wind energy, the test station for small windmills tests and licences windmills for the Danish market and offers consulting assistance for the Danish windmill manufacturers.

32400 **(ZfI-Mitt—67) Reports of the Central Institute for Isotopes and Radiation Research.** (Akademie der Wissenschaften der DDR, Leipzig. Zentralinstitut fuer Isotopen- und Strahlenforschung). May 1983. 80p. NTIS (US Sales Only), PC A05/MF A01. Order Number DE84780375.

Selected papers have been processed for inclusion in the Energy Data Base.

32401 **Marketing: winning proposals for government work.** Balsmeyer, D.L.; Joehnk, P.J.; Butler, R.O. (Mound Facility, Miamisburg, OH). *Architectural Record;* vp(Aug 1982).

While many architects and engineers are all too familiar with the procedures for getting government work, many more will wade in without an understanding of the highly detailed route from their identification of such projects to their actually being selected for them. This article represents the expriences and practices in a typical situation for government research installations in which a private corporation, Monsanto, operates the Mound Facility in Ohio for the Department of Energy. Beyond day-to-day operations, the corporation secures architectural and engineering services for new construction, and must follow Federal guidelines in doing so. Are all government procedures for acquiring such services alike? Except in the few "showcase" projects for which competitions are now often held, the answer is yes. And the emphasis is on experience and technical proficiency - not design ability.

In the past, use of computers and software to manage physical plant has usually involved systems similar to the clockwork automata of the 17th century. The next generation of plant control will include intelligent systems - computer systems having knowledge of the plant and being capable of intelligent behavior, even though only some control functions will need such expertise. This report develops a framework for a universe of discourse usable by such non-human experts. It is based on the idea that a design has many features of a contract and may be described as a contract between humans and a machine, defining what each must do to attain a goal. Several points are discussed: the use of techniques in analytical redundancy and their place as analogues in administrative control for conventional techniques in physical control; the use of redundant computer systems to protect against hardware faults; the necessity to prove properties of software used in redundant hard-

ware, because software faults are common modes across redundant hardware; and some issues in choosing a programming language for provable control software. Because proof of correctness is costly, it should be used only where necessary. This report concludes that the degree of reliability needed by the plant model used in analytic redundancy protection need not be nearly as reliable as the mechanism to detect discrepancy between plant and model.

32404 **(ANL/TM—335-Rev.) Guide to Graphics at ANL. Rev.** Bertrand, R.M.; Hack, B.R.; Malon, D.M. (Argonne National Lab., IL (USA)). Apr 1984. Contract W-31-109-ENG-38. 182p. NTIS, PC A09/MF A01; 1; GPO Dep. Order Number DE84013189.

Portions are illegible in microfiche products. Original copy available until stock is exhausted.

Guide to Graphics at ANL is a general reference guide to doing graphics at Argonne. It should be used along with documents which describe the use of specific graphics software or operating systems. Guide to Graphics at ANL describes the current graphics environment at Argonne National Laboratory, including the hardware, the software, and the procedures needed to write and run programs that produce graphics at Argonne. While the majority of the material presented documents production of graphics on the central IBM computers, production of graphics on divisional VAX computers is also discussed. However, no attempt is made to cover in detail the hardware and software available on the divisional VAX computers. 48 references, 19 figures, 15 tables.

32405 **(BARC—1179) Microprocessor based dual bus structured data acquisition and processing system : DAPS-80.** Pethe, V.A.; Patankar, A.M.; Ram, L.S.; Bayala, A.K.; Ghodgaonkar, M.D. (Bhabha Atomic Research Centre, Bombay (India)). 1983. 22p. NTIS (US Sales Only), PC A02/MF A01. Order Number DE84701744.

The microprocessor based dual bus structured data acquisition and processing system has been designed around Intel 8080 microprocessor. The system is described and operational results are given.

32406 **(CONF-8405171—1) Local area networks: applications in the Instrumentation and Controls Division at Oak Ridge National Laboratory.** Prater, D.G. (Oak Ridge National Lab., TN (USA)). 1984. Contract AC05-84OR21400. 30p. NTIS, PC A03/MF A01; GPO Dep. Order Number DE84012324.

From 13. midyear meeting of the American Society for Information Science; Bloomington, IN, USA (20 May 1984).

The use of a local area network requires some knowledge of how computers are connected together and an understanding of computer terminology, standards, equipment, and strengths and weaknesses. The intent here is to provide a brief background regarding these subjects and to describe specific applications in the Instrumentation and Controls Division at Oak Ridge National Laboratory (ORNL).

32407 **(CONF-8405173—1) Workshop on transaction processing/reporting.** Smith, M.I.; Amburgey, J.D. (Oak Ridge National Lab., TN (USA)). 1984. Contract AC05-84OR21400. 49p. NTIS, PC A03/MF A01; 1; GPO Dep. Order Number DE84012334.

From Mark IV users group meeting; New York, NY, USA (1 May 1984).

Portions are illegible in microfiche products.

This manual teaches efficient operation of the Informatics General Mark IV's transaction processing. Examples are given. (GHT)

32408 **(CONF-8405175—1) Raster scan algorithm for generating hidden isoparametric surfaces.** Akin, J.E.; Montgomery, J.; Gray, W.H. (Rice Univ., Houston, TX (USA); Oak Ridge National Lab., TN (USA)). 1984. Contract AC05-84OR21400. 16p. NTIS, PC A02; 3; GPO Dep. Order Number DE84012323.

From Mathematics finite element and applications conference; London, UK (2 May 1984).

Paper copy only, copy does not permit microfiche production.

Finite element analyses and computer aided design systems must often present graphical representations of three-dimensional isoparametric surfaces. Various algorithms have been developed to describe color surfaces and to determine visibility. A procedure for using isoparametric interpolation to define such surfaces is presented. It is an extension of an earlier algorithm for defining contour lines. When applied on a raster scan color graphics device (or a line printer) the procedure allows the true representation of isoparametric surfaces. Surfaces can be presented in different colors. The intersection of surfaces is automatically included in the procedure for determining visibility. The algorithm can also be easily extended to allow color contour shading of the surfaces to values.

32409 **(EGG-M—06084) Fortran 8x: the scientific programming language of the future.** Marshall, N.H. (EG and G Idaho, Inc., Idaho Falls (USA)). 13 Apr 1984. Contract AC07-76ID01570. 34p. (CONF-8404165—1). NTIS, PC A03/MF A01; 1; GPO Dep. Order Number DE84012526.

From FORTRAN forum; Geneva, Switzerland (13 Apr 1984).

Portions are illegible in microfiche products.

The draft standard is known as Fortran 8x because it is anticipated that it will be completed in the 1980's, but the exact year is not yet known. There have been many changes proposed for Fortran 8x, and many of them will seem like a radical change for Fortran, but all of them are functions which have been tried before. The final language will partly bridge the gap between Fortran 77 and languages such as Pascal, PL/1, Algol 68, Modula and Ada while retaining Fortran's unique advantages. Despite the extent of the revision, there will be few totally new and untried features added. What is described may seem radical to programmers using the present standard unless they have also tried the newer languages.

32410 (IAEA-TECDOC—280, pp 93-108) **Distributed intelligence versus central laboratory.** Halling, H. (Kernforschungsanlage Juelich G.m.b.H. (Germany, F.R.). Zentrallabor fuer Elektronik). Jan 1983. NTIS (US Sales Only), PC A14/MF A01. Order Number TI84780374. (CONF-8209219—).

From Advisory group meeting on data acquisition systems in nuclear science and technology; Vienna, Austria (13 Sep 1982).

After a discussion of the main tasks in a nuclear laboratory like overall experiment planning, sample production and management, performance of experiments, data processing and report generation the essential disadvantages of centralised systems are shown and the proper measures for overcoming those by distribution are discussed. Finally possible shortcomings due to improper design and management of distributed architectures are shown.

32411 **(IC—82/178) Identification of necessary and sufficient conditions for real non-negativeness of rational matrices.** Saeed, K. (International Centre for Theoretical Physics, Trieste (Italy)). Dec 1982. 16p. NTIS (US Sales Only), PC A02/MF A01. Order Number DE84701746.

The necessary and sufficient conditions for real non-negativeness of rational matrices have been identified. A programmable algorithm is developed and is given with its computer flow chart. This algorithm can be used as a general solution to test the real non-negativeness of rational matrices. The computer program assures the feasibility of the suggested algorithm.

32412 **(IC—83/37) Distortions in frequency spectra of signals associated with sampling-pulse shapes.** Njau, E.C. (International Centre for Theoretical Physics, Trieste (Italy)). Apr 1983. 26p. NTIS (US Sales Only), PC A03/MF A01. Order Number DE84701747.

A method developed earlier by the author [IC/82/44; IC/82/45] is used to investigate distortions introduced into frequency spectra of signals by the shapes of the sampling pulses involved. Conditions are established under which the use of trapezoid or exponentially-edged pulses to digitize signals can make the frequency spectra of the resultant data samples devoid of the main features of the signals. This observation does not, however, apply in any way to cosinusoidally-edged pulses or to pulses with cosine-squared edges. Since parts of the Earth's surface and atmosphere receive

direct solar energy in discrete samples (i.e. only from sunrise to sunset) we have extended the technique and attempted to develop a theory that explains the observed solar terrestrial relationships. A very good agreement is obtained between the theory and previous long-term and short-term observations.

32413 **(JINR—5-83-244) Data evaluation efficiency on the base of a nonuniform sample.** Dorogov, V.I.; Chistyakov, V.P.; Pokrovskij, V.N. (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Nuclear Problems). 1983. 8p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. Order Number DE84701749.

The comparative analysis of the efficiency of different methods used for determining the estimates of parameters obtained as a result of experimental data processing in the presence of incomplete or rough a priori information is made. The asymptotic dispersion of various estimates obtained by the methods of sample mean, sample median, sample truncation as well as by the Huber method and the method of maximum-likelihood fit are compared for a nonuniform sample. The effect of bias spread on the asymptotic dispersions is also estimated for the case when data processing is made without taking into account this bias. The conclusion is drawn that the best results are obtained by the method of sample truncation and by the Huber method.

32414 **(JINR—R-10-83-77) Eigenfunctions of angular scanning via charge-coupled device-matrix.** Soroko, L.M. (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Nuclear Problems). 1983. 9p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. Order Number DE84701748.

The angular scanning algorithm for images created by a light sensitive charge-coupled devices (CCD) is described. The angular scanning algorithm is based on the eigenfunctions of angular scanning which are associated with discrete Walsh functions arranged according to the increasing of sequency. The index of memory cell into which the contents of image matrix cell goes is determined by the fact whether the component of discrete Walsh function is changing its sign or not. It is shown that the angular scanning algorithm offers high noise stability. The angular scanning algorithm can be used for production of the angular distribution of straight line tracks issuing from the common appex, the realization of this algorithm being inside the stage of image read-out by CCD-matrix. The revue of properties of Walsh-transform of images and the Walsh-masks for straight line tracks is presented.

32415 **(LA-UR—83-3085) Prolonging the life of software.** Connell, J.; Brice, L. (Los Alamos National Lab., NM (USA)). 1984. Contract W-7405-ENG-36. 30p. (CONF-840710—1). NTIS, PC A03/MF A01. Order Number DE84001722.

From National computer conference; Las Vegas, NV, USA (1 Jul 1984).

Presented here are methods for successfully controlling software maintenance activity so that present systems will be more useful and less expensive to support. While it is based on experience at Los Alamos National Laboratory, it is not based on solutions developed and implemented there. Los Alamos is presently struggling with the problems identified in this paper and is impacted by them to the same extent as the rest of industry. An idea has emerged from this struggle: the deterioration of production software is basically a quality control problem which can and should be solved. Many data processing shops currently have two options concerning old (over five years), marginally useful systems; pay the high cost of supporting them or undertake a rewrite. If the principles presented in this paper are applied, a third option may become available; prolonging the useful life of software by making it more cost-effective to support.

32416 **(LA-UR—84-1574) Sensitive dependence to parameters, fat fractals, and universal strange attractors.** Farmer, J.D. (Los Alamos National Lab., NM (USA)). May 1984. Contract W-7405-ENG-36. 10p. (CONF-840385—2). NTIS, PC A02/MF A01; 1; GPO Dep. Order Number DE84012440.

From 15. lunar and planetary science conference; Houston, TX, USA (12 Mar 1984).

Portions are illegible in microfiche products.

There are many nonlinear differential equations for which two different types of behavior, such as chaos and periodicity, are interwoven in a complex and intricate manner, so that the bifurcation parameters form a fat fractal. The result is that statistical averages vary wildly with parameters and, strictly speaking, prediction becomes impossible even in the statistical sense. (For example, climate, as well as weather, is unpredictable). There is, however, order in this unpredictable behavior, which can be described by a universal strange attractor of the renormalization transformation.

32417 **(NBS/FIPS/PUB—60-2) I/O channel interface.** (International Business Machines Corp., Armonk, NY (USA)). 29 Jul 1983. 106p. NTIS, PC A06/MF A01. Order Number TI84900961.

This standard defines the functional, electrical, and mechanical interface specifications for connecting computer peripheral equipment as a part of automatic data processing (ADP) systems. This standard, together with a companion standard for power control, defines the hardware characteristics for the I/O channel level interface. In order to achieve full plug-to-plug interchangeability of peripheral components, device class specific operational specifications standards are also required for each class of peripheral device. The Government's intent in employing this I/O Channel Interface standard is to reduce the cost of satisfying the Government's data processing requirements through increasing its available alternative sources of supply for computer system components at the time of initial system acquisition, as well as in system replacement and augmentation and in system component replacement. This standard is also expected to lead to improved reutilization of system components. When acquiring ADP systems and system components, Federal agencies shall cite this standard in specifying the interface for connecting computer peripheral equipment as a part of ADP systems.

32418 **(SAND—84-0293) Smoother interpolant for DE/STEP, INTRP and DEABM: II.** Watts, H.A. (Sandia National Labs., Albuquerque, NM (USA)). May 1984. Contract AC04-76DP00789. 23p. NTIS, PC A02/MF A01; GPO Dep. Order Number DE84012915.

This report presents an improved smoother interpolant for the Adams family of ODE methods. A correction to the STEP code is given which eliminates an error that occurred under certain circumstances in forming the higher order coefficients for the method. Listings and details are provided for implementing the interpolation algorithm in the DE/STEP, INTRP suite of codes, and its descendant DEABM.

32419 **(SAND—84-0448) Boolean computation of optimum hitting sets.** Hulme, B.L.; Baca, L.S.; Shiver, A.W.; Worrell, R.B. (Sandia National Labs., Albuquerque, NM (USA)). Apr 1984. Contract AC04-76DP00789. 13p. NTIS, PC A02/MF A01; 1; GPO Dep. Order Number DE84012920.

Portions are illegible in microfiche products. Original copy available until stock is exhausted.

This report presents the results of computational experience in solving weighted hitting set problems by Boolean algebraic methods. The feasible solutions are obtained by Boolean formula manipulations, and the optimum solutions are obtained by comparing the weight sums of the feasible solutions. Both the algebra and the optimization can be accomplished using the SETS language. One application is to physical protection problems. 8 references, 2 tables.

32420 **(SLAC-PUB—3332) 3081/E processor.** Kunz, P.F.; Gravina, M.; Oxoby, G.; Rankin, P.; Trang, Q.; Ferran, P.M.; Fucci, A.; Hinton, R.; Jacobs, D.; Martin, B. (Stanford Linear Accelerator Center, CA (USA); European Organization for Nuclear Research, Geneva (Switzerland)). Apr 1984. Contract AC03-76SF00515. 7p. (CONF-8405162—1). NTIS, PC A02/MF A01; GPO Dep. Order Number DE84012513.

From Symposium on recent developments in computing, processor, and software research for high-energy physics; Guanajuato, Mexico (8 May 1984).

The 3081/E project was formed to prepare a much improved IBM mainframe emulator for the future. Its design is based on a large amount of experience in using the 168/E processor to increase available CPU power in both online and offline environments. The processor will be at least equal to the execution speed of a 370/168 and up to 1.5 times faster for heavy floating point code. A single processor will thus be at least four times more powerful than the VAX 11/780, and five processors on a system would equal at least the performance of the IBM 3081K. With its large memory space and simple but flexible high speed interface, the 3081/E is well suited for the online and offline needs of high energy physics in the future.

32421 **(UCID—19592-Rev.1) DYNA3D user's manual (nonlinear dynamic analysis of solids in three dimensions).** Hallquist, J.O. (Lawrence Livermore National Lab., CA (USA)). Apr 1984. Contract W-7405-ENG-48. 109p. NTIS, PC A06/MF A01; 1; GPO Dep. Order Number DE84012828.

Portions are illegible in microfiche products. Original copy available until stock is exhausted.

This report provides an updated user's manual for DYNA3D, an explicit three-dimensional finite element code for analyzing the large deformation dynamic response of inelastic solids. A contact-impact algorithm permits gaps and sliding along material interfaces. By a specialization of this algorithm, such interfaces can be rigidly tied to admit variable zoning without the need of transition regions. Spatial discretization is achieved by the use of 8-node solid elements, and the equations-of-motion are integrated by the central difference method. DYNA3D contains fifteen material models and nine equations of state to cover a wide range of material behavior.

32422 **(UCRL—51744) Some technical considerations in the determination of probability-of-failure confidence contours.** Corynen, G.C. (Lawrence Livermore National Lab., CA (USA)). 29 Jan 1975. Contract W-7405-ENG-48. 9p. NTIS, PC A02/MF A01; GPO Dep. Order Number DE84013486.

A method is presented to obtain a confidence contour for the proportion F/sub X/(x) of a set of systems OMEGA which fail at or below an arbitrary environmental stress level x. Here F/sub X/ is the cumulative distribution function (CDF) of a random variable X on OMEGA whose mean μ and variance σ^2 are unknown, and X(omega) is the failure level (threshold) of system omega epsilon OMEGA. It is assumed that X is normal (Gaussian), and that a random sample of size N is available. The sample size N is thus included explicitly in the expressions for the confidence contour, and its influence upon the quality of the contour can be readily established.

32423 **(UCRL—89934) Computer graphics distortion of IMAX and OMNIMAX projection.** Max, N.L. (Lawrence Livermore National Lab., CA (USA)). 19 Oct 1983. Contract W-7405-ENG-48. 24p. (CONF-831281—1). NTIS, PC A02/MF A01; 1; GPO Dep. Order Number DE84012606.

From Nicograph conference; Tokyo, Japan (1 Dec 1983).

Portions are illegible in microfiche products.

This paper presents methods of compensating for the distortion of the UMNIMAX projection lens, so that computer animation may be prepared for viewing in a tilted dome OMNIMAX theater.

32424 **(UCRL—90777) AI/Simulation Fusion Project at Lawrence Livermore National Laboratory.** Erickson, S.A. (Lawrence Livermore National Lab., CA (USA)). 25 Apr 1984. Contract W-7405-ENG-48. 63p. (CONF-8405178—1). NTIS, PC A04/MF A01; 1; GPO Dep. Order Number DE84012609.

From Operations Research Society of America national meeting; San Francisco, CA, USA (16 May 1984).

Portions are illegible in microfiche products.

This presentation first discusses the motivation for the AI Simulation Fusion project. After discussing very briefly what expert systems are in general, what object oriented languages are in general, and some observed features of typical combat simulations, it discusses why putting together artificial intelligence and combat simulation makes sense. We then talk about the first demonstration goal for this fusion project.

32425 **An interactive parallel processor for data analysis.** Mong, J.; Logan, D.; Maples, C.; Rathbun, W.; Weaver, D. (Lawrence Berkeley Laboratory, University of California, Berkeley, CA 94720). *IEEE (Institute of Electrical and Electronics Engineers) Transactions on Nuclear Science;* **31**: No. 1, 162-166(Feb 1984). (CONF-831015—).

From Nuclear science symposium; San Francisco, CA, USA (19 Oct 1983).

A parallel array of eight minicomputers has been assembled in an attempt to deal with kiloparameter data events. By exporting computer system functions to a separate processor, the authors have been able to achieve computer amplification linearly proportional to the number of executing processors.

32426 **Local area networks: A matter of choice.** St. Amand, J.V. (Interlan, Inc. 3 Lyberty Way Westford, MA 01886). *IEEE (Institute of Electrical and Electronics Engineers) Transactions on Nuclear Science;* **31**: No. 1, 811-817(Feb 1984). (CONF-831015—).

From Nuclear science symposium; San Francisco, CA, USA (19 Oct 1983).

Several new data communications/information management networks, specifically designed for use in a local domain, are commercially available "off-the-shelf". Known collectively as Local Area Networks (LANs), the networks span the spectrum of possible implementations. Developed in the absence of national and international standards in this domain, the networks are--with one exception -- based on closed systems. The Ethernet specification, originally due to the Xerox Corporation, is publicly available and has emerged as an open and de facto standard. Four classes of LANs are identified with emphasis on the multi-purpose LAN. Multi-purpose LANs range in linear coverage from hundreds to thousands of meters and support a variety of applications. Multi-purpose LANs, by virture of their limited inear coverage, are able to exploit new and emerging technologies thereby optimizing their effectiveness in their domain of applicability. Future implementations of international standards will reduce the cost of the multi-purpose LAN and further the cause of multi-vendor compatibility.

32427 **Discrete C^1 interpolant for tetrahedral data.** Alfeld, P. *Rocky Mountain Journal of Mathematics;* **14**: No. 1, 5-16(Jan 1984). Contract AC02-82ER12046.

We assume an underlying three-dimensional domain that has been tesselated into tetrahedra. A piecwise rational scheme is described that interpolates to function and gradient values at the vortices of the tetrahedra. No other data are required. The scheme is local and has quadratic precision. Its construction is described and numerical examples are given.

32428 **Transfinite C^2 interpolant over triangles.** Alfeld, P.; Barnhill, R.E. *Rocky Mountain Journal of Mathematics;* **14**: No. 1, 17-76(Jan 1984). Contract AC02-82ER12046.

A transfinite C^2 interpolant on a general triangle is created. The required data are essentially C^2, no compatibility conditions arise, and the precision set includes all polynomials of degree less than or equal to eight. The symbol manipulation language REDUCE is used to derive the scheme. The scheme is discretized to two different finite dimensional C^2 interpolants in an appendix.

32429 **Three- and four-dimensional surfaces.** Barnhill, R.E.; Little, F.F. *Rocky Mountain Journal of Mathematics;* **14**: No. 1, 77-102(Jan 1984). Contract AC02-82ER12046.

The representation and approximation of three- and four-dimensional surfaces is accomplished by means of local, piecewise defined, smooth interpolation methods. In order to interpolate to arbitrarily located data, the schemes are defined on geometric domains of triangles or tetrahedra, respectively.

32430 Multistage trivariate surfaces. Barnhill, R.E.; Stead, S.E. *Rocky Mountain Journal of Mathematics;* **14**: No. 1, 103-222(Jan 1984). Contract AC02-82ER12046.

We construct four-dimensional surfaces that approximate arbitrarily placed information. The basis strategy is (1) interpolate to the arbitrarily placed data with a general method, (2) then evaluate this general method over a coarse rectilinear grid to provide data for a tensor product method, and (3) render the surface by evaluating the tensor product over a finte grid. Graphical illustrations are also included.

32431 Triangle-based C^1 interpolation method. Renka, R.J.; Cline, A.K. *Rocky Mountain Journal of Mathematics;* **14**: No. 1, 223-264(Jan 1984).

This paper discusses methods and software for C^1 interpolation at arbitrarily distributed data points in the plane. The primary results presented here are derivative-estimation procedures which lead to interpolatory surfaces constituting very accurate approximations for a variety of test functions.

32432 Estimation of gradients from scattered data. Stead, S.E. *Rocky Mountain Journal of Mathematics;* **14**: No. 1, 265-299(Jan 1984). Contract AC02-82ER12046.

Many techniques for producing a surface from scattered data require gradients at the data points. Since only positional data are usually known, the gradients must be estimated before the surface can be computed. The quality of the surface depends on the estimated gradients; so it is important to compute accurate estimates.

32433 Inaccuracies in the calculation of standard deviation with electronic calculators. Wanek, P.M.; Whipple, R.E.; Fickies, T.E.; Grant, P.M. (Los Alamos National Lab., NM). *Analytical Chemistry;* **54**: 1877-1878(1982).

The problems arising with data sets consisting of tightly bunched arrays and severe calculation round-off errors when electronic calculators are used to calculate standard deviation of data are discussed. A simple remedy to the problem is set forth briefly.

9903 Information Handling

REFER ALSO TO CITATION(S) 31002, 31003, 32397

32434 (AECL—7700) CRNL library serials list. Serial holdings in the main library. Alburger, T.P. (Atomic Energy of Canada Ltd., Chalk River, Ontario. Chalk River Nuclear Labs.). Apr 1982. 228p. NTIS (US Sales Only), PC A11/MF A01. Order Number DE84701910.

A list of 1900 serial publications (periodicals, society transactions and proceedings, annuals and directories, indexes, newspapers, etc.) is presented with volumes and years held by the Main Library. This library is the largest in AECL as well as one of the largest scientific and technical libraries in North America, and functions as a Canadian resource for nuclear information. A main alphabetical list is followed by broad subject field lists representing research interests, and lists of abstract and index serials, general bibliographic serials, conference indexes, press releases, English translations, and original language journals.

32435 (DOE/TIC—4629) DOE Energy Data Base: input magnetic tape description. Busse, A.E. (ed.). (Department of Energy, Oak Ridge, TN (USA). Technical Information Center). Jun 1982. 18p. NTIS, PC A02/MF A01. Order Number DE82013735.

This document describes the format the inputting bibliographic citations, abstracts, and subject content indicators for energy information on computer readable magnetic tape to be incorporated into the DOE data base. This base is used by TIC to generate multiple publications and to support information retrieval activities. Information, or data, pertinent to one bibliographic reference will be called an entry. The entries are logically composed of data elements (such as title, authors, etc.).

32436 (IAEA-TECDOC—280, pp 109-132) Local area networks for distributed intelligent systems. Klessmann, H. (Hahn-Meitner-Institut fuer Kernforschung Berlin G.m.b.H. (Germany, F.R.)). Jan 1983. NTIS (US Sales Only), PC A14/MF A01. Order Number TI84780374. (CONF-8209219—).

From Advisory group meeting on data acquisition systems in nuclear science and technology; Vienna, Austria (13 Sep 1982).

A local area network is a data communication system allowing a number of independent devices to communicate with each other over a moderate-sized region. Local area networks are intended for supporting a wide variety of applications and various data devices. After an enumeration of the primary characteristics of current local area networks, data transmission in ring networks (empty-slot ring, token ring) and bus networks (contention bus, e.g. ETHERNET, token bus) is discussed in some detail, along with a comparison of baseband and broadband transmission. The ISO Open System Interconnection with its seven-layered structure is described, and efforts to create standards for local area networks are recounted.

32437 (IAEA-TECDOC—280, pp 173-182) Software for nuclear data acquisition systems. Christensen, P. (Risoe National Lab., Roskilde (Denmark)). Jan 1983. NTIS (US Sales Only), PC A14/MF A01. Order Number TI84780374. (CONF-8209219—).

From Advisory group meeting on data acquisition systems in nuclear science and technology; Vienna, Austria (13 Sep 1982).

The situation for experimenters and system designers needing software for instrumentation is described. It is stated that software for a data acquisition system can be divided into programmes described as the foundation software, the applications programme, and the analysis programme. Special attention is given to CAMAC. Two examples from Risoe describing data transportation and archiving are given. Finally the supply of software and the problems of documentation are described.

32438 (IAEA-TECDOC—280) Data acquisition and analysis systems for nuclear research and applications. Current status and trends. Proceedings of an advisory group meeting organized by the IAEA and held in Vienna, Austria, 13-17 September 1982. (International Atomic Energy Agency, Vienna (Austria)). Jan 1983. 319p. (CONF-8209219—). NTIS (US Sales Only), PC A14/MF A01. Order Number DE84780374.

From Advisory group meeting on data acquisition systems in nuclear science and technology; Vienna, Austria (13 Sep 1982).

Selected papers have been processed for inclusion in the Energy Data Base.

32439 (NBS/FIPS/PUB—104) Guideline for implementation of ANSI codes for the representation of names of countries, dependencies, and areas of special sovereignty. (National Bureau of Standards, Washington, DC (USA)). 19 Sep 1983. 32p. NTIS, PC A03/MF A01. Order Number TI84900966.

This Guideline implements ANSI Z39.27, Structure for the Representation of Names of Countries of the World for Information Interchange, of the American National Standards Institute (ANSI). ANSI Z39.27 adopts, with qualifications, the entities, names, and codes prescribed by ISO 3166, Codes for the Representation of Names of Countries, a standard of the International Organization for Standardization (ISO). The qualifications provide for complete coverage of the land areas of the world without overlap or duplication, and for entity names that, to the maximum extent possible, are approved or accepted by the United States Board on Geographic Names. Both two and three-character alphabetic codes are provided for each entity adopted from ISO 3166. The two-character codes are provided for general use and are recommended by ISO for international interchange. The three-character codes are available for special applications when their use would provide a particular advantage.

32440 **(SAND—84-1063C) Technology transfer revisited.** Traeger, R.K. (Sandia National Labs., Albuquerque, NM (USA)). May 1984. Contract AC04-76DP00789. 11p. (CONF-8405184—1). NTIS, PC A02/MF A01; GPO Dep. Order Number DE84012233.

From Meridian technology transfer conference; Washington, DC, USA (30 May 1984).

Technology transfer occurs continuously because individual researchers are enthused about their work. Recent concerns about the effectiveness of tech transfer, however, have developed a misconception on both the need for and effectiveness of transfer processes. Research, especially fundamental or mission-oriented research, may be successful in solving a national problem but have no industrial application. The majority of the technology transferred is through many people, takes many routes, and usually requires 5 to 10 years to become incorporated; that transfer is invisible. Technology transfer is alive and effective, and should continue to be encouraged. However, transfer has to be done at the individual researcher level. Funds spent on tech transfer offices and studies could be more effectively spent on the research itself. 11 references, 6 tables.

CORPORATE AUTHOR INDEX

In the Corporate Index, report literature is indexed using the name of the organization or institution responsible for issuing the report. Headings are provided for all report literature and for published literature for which a corporate approach is especially desirable, e.g., symposium and conference proceedings.

Each entry under a corporate heading gives the document title and the volume and abstract numbers. The document type, e.g., R for Report; country of publication, e.g., US; and language of the document, e.g., In German; are given in parentheses at the end of the entry. If no language statement appears, the language is English. Tables of document types and country of publication codes appear after the indexes.

DOE Energy Information Data Base: Corporate Author Entries (DOE/TIC-4585) is used in the standardization of corporate entries. DOE/TIC-4585 is available for purchase from the National Technical Information Service (NTIS), U. S. Department of Commerce, Springfield, Virginia 22161.

Design and prototype results of a far-infrared interferometer for MFTF-B, 9:32330 (R;US)
START/TM: a study of start-up and fractional power operation of tandem mirror fusion reactors, 9:32351 (R;US)

California Univ., Los Angeles (USA). Dept. of Electrical Engineering
Studies of CO_2 laser interactions with plasmas. Final technical report, 1 January 1981-30 March 1983, 9:32348 (R;US)

California Univ., Los Angeles (USA). School of Public Health
Methanogenesis from acetate, a key intermediate in nature. Annual progress report, 1983-1984, 9:30455 (R;US)

California Univ., Riverside (USA)
Novel analytical approaches to coal beneficiation. Quarterly report, 9:30162 (R;US)

California Univ., Santa Barbara (USA). Dept. of Chemical and Nuclear Engineering
Experimental data report on condensation in a single inverted U-tube, 9:30871 (R;US)

California Univ., Santa Barbara (USA). Inst. for Polymers and Organic Solids
Charge storage in doped poly(thiophene). Technical report, 9:30977 (R;US)

Cal Recovery Systems, Inc., Richmond, CA (USA)
Composition and properties of municipal solid waste and its components. Final report, 9:31107 (R;US)

Cambridge Univ. (UK)
Particle ratios at high transverse momentum in pp collisions at $\sqrt{s}$ = 63 GeV and correlations between high p/sub T/ identified charged particles and associated identified charged particles, 9:31980 (R;US)

Canada Centre for Mineral and Energy Technology, Ottawa, Ontario
Assessment of the microbial populations in field and test pit experiments at Elliot Lake, Ontario, Canada, 9:30344 (R;CA)
Calibration of environmental monitors operating on time integrating principles for radon/thoron decay products, 9:31560 (R;CA)
Chlorine-assisted leaching of Key Lake uranium ore, 9:30283 (R;CA)
Experimental procedures for the calibration of scintillation cells used in the determination of radon gas concentrations, 9:31559 (R;CA)
Hydrochloric acid leach of Agnew Lake uranium concentrate, 9:30285 (R;CA)
Hydrochloric acid leaching of Rabbit Lake uranium ore, 9:30286 (R;CA)
Progress report on a technical evaluation of four personal alpha-dosimeters in two underground uranium mines in the Elliot Lake area, 9:31558 (R;CA)
Removal of radioactive radium (Ra^{226}) from chloride liquors by columnar ion exchange in the presence of calcium, magnesium and iron cations. Progress report No. 3, 9:30284 (R;CA)
Tree growth studies on uranium mill tailings, 9:30386 (R;CA)

Canada Centre for Mineral and Energy Technology, Ottawa, Ontario. Mining Research Labs.
Joint Panel on Occupational and Environmental Research for Uranium Production 1981 annual report, 9:30392 (R;CA)

Carnegie-Mellon Univ., Pittsburgh, PA (USA). Center for Energy and Environmental Studies
Modelling and assessment of advanced processes for integrated environmental control of coal-fired power plants. Technical progress report, 9:30651 (R;US)
Modelling and assessment of advanced processes for integrated environmental control of coal-fired power plants. Technical progress report, 9:30652 (R;US)
Program of basic research on the utilization of coal-water mixture fuels, 9:30213 (R;US)

Cekmece Nuclear Research and Training Center, Istanbul (Turkey)
Investigation of biokinetics of cadmium in the mussel in various environmental conditions, 9:31801 (R;TR;In Turkish)
Investigation of the response of improved self-powered neutron detectors, 9:31529 (R;TR;In Turkish)

Centec Corp., Reston, VA (USA)
Environmental and energy benefits of microprocessor control of oven airflows from metal painting operations, 9:31085 (R;US)

Center for Energy and Environment Research, Mayaguez (Puerto Rico)
Distributional and socioeconomic impacts of electricity price increases on the Puerto Rican population. Volume 2, 9:31724 (R;US)
Ecological analysis of spatial and temporal patterns of pelagic ecosystem components potentially interacting with an OTEC (Ocean Thermal Energy Conversion) plant near Punta Tuna, Puerto Rico: physical characteristics. Final report, 9:30543 (R;US)
Generation of mesoscale hydrodynamic phenomena by the Grappler and Whiting Seamounts, southeast of Puerto Rico. Master thesis, 9:31859 (R;US)

Central Electricity Generating Board, Berkeley (UK). Berkeley Nuclear Labs.
Methods for assessing the long term radiological consequences of radionuclide entry into groundwater, 9:31719 (R;GB)

Centre d'Etude de l'Energie Nucleaire, Mol (Belgium)
Annual report 1982, 9:32393 (R;BE)

Pu-content verification by calorimetry, 9:30404 (R;US)
Centre National de la Recherche Scientifique, 75 - Paris (France)
Dimensioning of the Hitec circuit of the Them-Thek preliminary project (After-Themis studies), 9:30542 (R;FR;In French)
Centre Scientifique et Technique de l'Industrie Textile Belge (CENTEXBEL), Brussels
Heat resistant protective clothing, 9:31822 (R;US;FR)
Chemical Coaters Association, Wheaton, IL (USA)
Environmental and energy benefits of microprocessor control of oven airflows from metal painting operations, 9:31085 (R;US)
Chem-Pro Corp., Fairfield, NJ (USA)
Laboratory tests of phenol removal and ammonia and hydrogen sulfide stripping from SRC-I wastewater. Final technical report, 9:30132 (R;US)
Chevron Research Co., Richmond, CA (USA)
Refining and upgrading of synfuels from coal and oil shales by advanced catalytic processes, 9:30113 (R;US)
City Coll., New York (USA)
Glueballs and beyond, 9:32013 (R;US)
City Coll., New York (USA). Dept. of Physics
Bates GaAs polarized electron source, 9:31503 (R;US)
City Univ. of New York, NY (USA)
Non-geometrical optics investigation of mode conversion in weakly relativistic inhomogeneous plasmas. Annual progress report, September 14, 1983-May 14, 1984, 9:32305 (R;US)
Colorado Geological Survey, Denver (USA)
Evaluation of coking coals in Colorado. Resource Series 7, 9:30186 (R;US)
Helium and ground temperature surveys at Steamboat Springs, Colorado. Special Publication 21, 9:30580 (R;US)
Preliminary investigation and feasibility study of environmental impact of energy resource development in the Denver Basin, 9:30183 (R;US)
Colorado School of Mines, Golden (USA)
Pyrolysis and gasification kinetics of densified biomass. Final report, 9:30454 (R;US)
Colorado School of Mines, Golden (USA). Dept. of Geology
Remanent and rock magnetic properties at the Hanna, Wyoming underground coal gasification site: Hanna II phases 2 and 3 experiment, 9:30117 (R;US)
Colorado Univ., Denver (USA). Health Sciences Center
Hydrocarbon-induced cancer risks in oil shale processing, 9:30274 (R;US)
Columbia Univ., New York (USA)
Safety and deterministic failure analyses in high-beta D-D tokamak reactors, 9:32352 (R;US)
Columbia Univ., New York (USA). Cancer Center
Versatility of laser induced fluorescence line narrowing in chemical analysis, 9:31288 (R;US)
Columbia Univ., New York (USA). Dept. of Biochemistry
Neutron diffraction and the decomposition of membrane scattering profiles into the scattering profiles of their molecular components, 9:31733 (R;US)
Columbia Univ., New York (USA). Dept. of Chemistry
Mechanism of Ziegler-Natta polymerization of acetylene: a nutation NRMR study. Technical report, 22 Jun 82-9 Dec 83, 9:31242 (R;US)
Columbia Univ., New York (USA). Radiological Research Lab.
Radiation physics, biophysics and radiation biology. Progress report, October 1, 1982-November 1983, 9:31753 (R;US)
Columbia Univ., Palisades, NY (USA). Lamont-Doherty Geological Observatory
Geologic observations at the 2800-meter radioactive waste disposal site and associated deepwater dumpsite 106 (DWD-106) in the Atlantic Ocean. (Revised). Final report, 9:31858 (R;US)
Combustion Engineering, Inc., Chattanooga, TN (USA). Chattanooga Nuclear Operations
Investigation of steam generator corrosion products under typical PWR operating conditions. Final report, 9:30715 (R;US)
Combustion Engineering, Inc., Windsor, CT (USA)
Wear measurements of nuclear power plant components. Final report, 9:30698 (R;US)
Comissao Nacional de Energia Nuclear de Brasil, Rio de Janeiro
3. National Meeting of Reactor Physics, 9:30796 (R;BR)
Authorization for the functioning of service laboratories for personal monitoring, 9:31011 (R;BR;In Portuguese)
Physical protection of nuclear operational units, 9:30393 (R;BR;In Portuguese)
Safety of systems for the retention of wastes containing radionuclides, 9:30318 (R;BR;In Portuguese)
Standard model for safety analysis report of fuel reprocessing plants, 9:30388 (R;BR;In Portuguese)
Standard model for safety analysis report of fuel fabrication plants, 9:30317 (R;BR;In Portuguese)
Comitato Nazionale per l'Energia Nucleare, Casaccia (Italy). Dipartimento Radiazioni e Ricerche di Sicurezza e Protezione
Method for evaluation of atmospheric stability: application to the Casaccia site, 9:31642 (R;IT;IT)
Comitato Nazionale per l'Energia Nucleare, Frascati (Italy). Lab. Nazionali di Frascati
Adone parameters, beam structure and luminosity, 9:31526 (TG;US)
Commission of the European Communities, Ispra (Italy). Joint Nuclear Research Center
Two-dimensional vapor flow analysis in heat pipes, 9:31418 (R;US)
Commission of the European Communities, Ispra (Italy). Joint Research Centre
Pu-content verification by calorimetry, 9:30404 (R;US)
Connecticut Univ., Farmington (USA). Div. of Cardiology
Neutron diffraction and the decomposition of membrane scattering profiles into the scattering profiles of their molecular components, 9:31733 (R;US)
CONSAD Research Corp., Vienna, VA (USA)
REGSHARE model systems and data base guide, 9:30992 (R;US)
Conservation and Renewable Energy Inquiry and Referral Service, Silver Spring, MD (USA)
Solar energy and your home: questions and answers, 9:30547 (R;US)
Coordinating Research Council, Inc., Atlanta, GA (USA)
Relationship between vehicle fuel temperature and ambient temperature. 1981 CRC (Coordinating Research Council) Kapuskasing field test. Final contractor report, 9:30251 (R;US)
Council for Mineral Technology, Randburg (South Africa)
Mineralogical investigation of a refractory gold ore, and of a sulphide concentrate and calcined tailing from that ore, 9:31291 (R;ZA)
Cryogenic Consulting Service, Inc., Weston, CT (USA)
Low-purity oxygen production study. Final report, 9:30143 (R;US)

D

Dane County Regional Planning Commission, Madison, WI (USA)
Estimating transportation energy consumption of residential land types. Final report, 9:31078 (R;US)
Daresbury Lab. (UK)
Application of synchrotron radiation to problems in materials science. Proceedings, 9:31141 (R;GB)
Davis Energy Group, CA (USA)
Residential heat pump with public water main heat exchanger, 9:31061 (R;US)
Decision Focus, Inc., Los Altos, CA (USA)
Decision framework for ambient air quality standards. Volume 1. Methodology and model structure. Final report, 9:30998 (R;US)
Decision Focus, Inc., Palo Alto, CA (USA)
Development of an analytical framework to assess the role of new technologies for liquid and gaseous fuels. Volume I. Background. Final report, 9:31024 (R;US)
Defence Research Establishment, Ottawa, Ontario (Canada)
Properties of fuels employed in a gas turbine combustor program. Technical note, 9:30441 (R;US)
Delaware Univ., Newark (USA). Coll. of Marine Studies
Ecology of tidal marshes of the Pacific Northwest Coast: a community profile, 9:31699 (R;US)
Department of Agriculture, Washington, DC (USA)
Regulation of expression of a soybean storage protein subunit gene. Progress report, 9:31729 (R;US)
Department of Energy, Idaho Falls, ID (USA). Idaho Operations Office
Emerging technology from the DOE industrial heat pump program, 9:31087 (R;US)

Department of Energy, Oak Ridge, TN (USA). Technical Information Center
DOE Energy Data Base: input magnetic tape description, 9:32435 (R;US)
DOE patents available for licensing. A bibliography for the period 1966-1974. Supplement 1, 9:32395 (R;US)
Department of Energy, Washington, DC (USA)
U.S. fast reactor materials and structures program, 9:30762 (R;US)
Department of Energy, Washington, DC (USA). Office of Industrial Programs
Energy conservation in fertilizer production, 9:31089 (R;US)
Department of Energy, Washington, DC (USA). Office of Inspector General
Semiannual report - 1st half FY 1984, October 1, 1983-March 31, 1984, 9:32394 (R;US)
Department of National Health and Welfare, Ottawa, Ontario (Canada). Health Protection Branch
Radiation hazard control in hospitals. Training manual I, 9:31734 (R;CA)
Department of Scientific and Industrial Research, Petone (New Zealand). Industrial Processing Div.
Anode carbon from buller coal, New Zealand, 9:30154 (R;US)
Deutsche Forschungs- und Versuchsanstalt fuer Luft- und Raumfahrt e.V., Koeln (Germany, F.R.)
IEA/SSPS - CRS Workshop, April 1983. Executive summary, 9:30530 (R;US)

Study of the reaction mechanisms in the system $^{20}Ne + {}^{197}Au$ at projectile energies between 7.5 and 20 MeV/u, 9:32139 (R;DE;In German)
French Government, Paris
Act No. 83-630 of 12 July 1983 concerning democratization of public enquiries and protection of the environment, 9:30790 (R;FR;In French)
Decree No. 82-734 of 24 August 1982 amending Decree No. 70-878 of 29 September 1970 (as amended) and Decree No. 72-1158 of 14 February 1972 (as amended) concerning the Atomic Energy Commission, 9:30789 (R;FR;In French)
Decree No. 73-138 of 12 February 1973 in implementation of the Act of 1 August 1905 on repression of fraud concerning chemical products in human foodstuffs and articles in contact with food and beverages for human and animal consumption, as well as processes and products used for cleaning such articles, 9:31784 (R;FR;In French)
Decree No. 82-531 of 22 June 1982 on the Higher Council for Nuclear Safety, 9:30788 (R;FR;In French)
Decree No. 82-918 of 26 October 1982 concerning the High Council for Nuclear Safety, 9:30786 (R;FR;In French)
Order of 24 June 1982 on the technical conditions for controlling and accounting of nuclear materials, 9:30397 (R;FR;In French)
Futures Group, Glastonbury, CT (USA)
Market potential of electrolytic hydrogen production in three northeastern utilities' service territories. Final report, 9:30434 (R;US)

G

GA Technologies, Inc., San Diego, CA (USA)
High power neutral beam heating on Doublet III, 9:32311 (R;US)
Remote examination of Fort St. Vrain HTGR fuel and reflector elements, 9:30745 (R;US)
Spiral fluted tubing for augmented heat transfer in process industries. Final report, 9:31090 (R;US)
General Accounting Office, Washington, DC (USA). Information Management and Technology Div.
Software problems in the development of the Defense Fuel Automated Management System, 9:30244 (R;US)
General Accounting Office, Washington, DC (USA). Office of the Comptroller General
Implementation of the national minerals and materials policy needs better coordination and focus, 9:31001 (R;US)
Improvements needed in EPA's Inspector General operations, 9:30990 (R;US)
General Accounting Office, Washington, DC (USA). Resources, Community and Economic Development Div.
DOE needs to evaluate fully the waste management effects of extending the useful life of nuclear fuel, 9:30333 (R;US)
DOE's safety and health oversight program at nuclear facilities could be strengthened, 9:31013 (R;US)
Status of Strategic Petroleum Reserve activities as of December 31, 1983, 9:30225 (R;US)
Wastewater dischargers are not complying with EPA pollution control permits, 9:31723 (R;US)
General Dynamics/Convair, San Diego, CA (USA)
High field Nb_3Sn Axicell insert coils for the Mirror Fusion Test Facility-B (MFTF-B) axicell configuration. Final report, 9:32367 (R;US)
General Electric Co., Cincinnati, OH (USA). Nuclear Systems Programs
T-111 Rankine system corrosion test loop. Volume I, 9:31422 (R;US)
General Electric Co., Malverne, PA (USA). Power Systems Management Business Dept.
Protection of New York State Electric Utility Distribution Systems containing decentralized storage and generation devices. Final report, 9:30608 (R;US)
General Electric Co., Richland, WA (USA). Hanford Atomic Products Operation
Nuclear materials control in irradiated fuel reprocessing, 9:30394 (R;US)
General Electric Co., Schenectady, NY (USA). Advanced Energy Programs Dept.
Electrode-induced beta battery degradation. Final report, 9:30980 (R;US)
General Electric Co., Schenectady, NY (USA). Corporate Research and Development Dept.
Development of a high temperature pH electrode for geothermal fluids. Final report, Task 1, 9:30586 (R;US)
Improvement in accuracy of prediction of electrical machine constants and generator models for subsynchronous resonance conditions. Volume 1. Three-dimensional electromagnetic field analysis of electrical machinery. Final report, 9:30645 (R;US)
Improvement in accuracy of prediction of electrical machine constants and generator models for subsynchronous resonance conditions. Volume 2. Application of two-dimensional finite-element techniques for synchronous machine modeling. Final report, 9:30646 (R;US)
General Electric Co., Schenectady, NY (USA). Large Steam Turbine-Generator Dept.
Determination of torsional fatigue life of large turbine generator shafts. Final report, 9:31385 (R;US)
General Electric Co., St. Petersburg, FL (USA). Neutron Devices Dept.
Interaction of thin erbium films with aluminum, 9:30440 (R;US)
Review of anode phenomena in vacuum arcs, 9:32312 (R;US)
General Research Corp., McLean, VA (USA)
Liming of acidified waters: a review of methods and effects on aquatic ecosystems. Final report, 9:31710 (R;US)
Geological Survey, Denver, CO (USA)
Eruptive history of the Dieng mountains region, central Java, and potential hazards from future eruptions, 9:31836 (R;US)
Evaluation of seismic reflection studies in the Yucca Mountain area, Nevada test site, 9:30361 (R;US)
Examples of the use of geologic and seismologic information for earthquake-hazard reduction in southern California, 9:31837 (R;US)
Geohydrologic and drill-hole data for test well USW H-3, Yucca Mountain, Nye County, Nevada, 9:30362 (R;US)
Geological Survey, Menlo Park, CA (USA)
Catalog of earthquakes in southern Alaska, April-June 1980, 9:31835 (R;US)
Geological Survey of Canada, Ottawa, Ontario
Uranium in granites. Proceedings of a workshop, 9:30280 (R;CA)
Geological Survey, Reston, VA (USA)
Hydrology of Area 6, Eastern Coal Province, Maryland, West Virginia, and Pennsylvania, 9:30190 (R;US)
Procedures for assessment of cumulative impacts of surface mining on the hydrologic balance, 9:30212 (R;US)
Workshop on continuing actions to reduce losses from earthquakes in the Mississippi Valley area, 9:31823 (R;US)

Geological Survey, Salt Lake City, UT (USA)
Preliminary hydrologic evaluation of the North Horn Mountain coal-resources area, Utah, 9:30189 (R;US)
George Washington Univ., Washington, DC (USA)
Nitration of oximes. The nitration of azines. Final technical report, 5 Dec 49-4 Dec 51, 9:31313 (R;US)
Georgia Inst. of Tech., Atlanta (USA)
Investigation of neutral beam driven impurity flow reversal as an impurity control method in future tokamaks, 9:32313 (R;US)
Rotation and impurity transport in a tokamak plasma with directed neutral beam injection, 9:32314 (R;US)
Georgia Inst. of Tech., Atlanta (USA). Engineering Experiment Station
High accuracy radiation efficiency measurement techniques. Final technical report, 9:31428 (R;US)
Georgia Inst. of Tech., Atlanta (USA). School of Nuclear Engineering and Health Physics
Survey of the methods of MHD analysis of magnetic islands, 9:32354 (R;US)
Gesellschaft fuer Strahlen- und Umweltforschung m.b.H. Muenchen, Neuherberg (Germany, F.R.)
Conditions for the storage of low-level radioactive wastes in the ASSE salt mine, 9:30364 (TG;US)
Conditions for the test emplacement of intermediate-level radioactive wastes in chamber 8a of the 511 m level of the Asse Salt Mine, 9:30363 (TG;US)
Methods for pre-assessing the chemical-pollutant load of Bavaria's population (period: 10-20 years), 9:31685 (R;DE;In German)
Goettingen Univ. (Germany, F.R.). Juristischer Fachbereich
Control density of the administrative courts with regard to nuclear licensing, 9:30787 (R;DE;In German)
Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow
Reports of 2. All union conference on technological problems of thermonuclear reactors. Volume 2, 9:32357 (R;SU;RU)
Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow. Inst. Atomnoj Ehnergii
Benchscale experiments at the "Neutrino detector" installation. ND-1, 9:31535 (R;SU;In Russian)
Device for measuring optical characteristics of substances in the soft A radiation range, 9:31536 (R;SU;In Russian)
Electron distribution function for electron-cyclotron heating in tokamaks, 9:32338 (TG;US)
Inclusive eta meson production by positive hadrons with the momentum of 10.5 GeV/c, 9:31984 (R;SU;In Russian)
MHD stability of corrugated toroidal systems, 9:32336 (TG;US)
Possibility of using pulsed CO_2 lasers for radiation scattering diagnostics in tokamak plasmas, 9:32333 (TG;GB)
Rotation of a tenuous plasma with high toroidal velocity in a tokamak, 9:32337 (TG;US)
Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow. Inst. Teoreticheskoj i Ehksperimental'noj Fiziki
Measurement and analytic representation of the magnetic field of 6-m ITEP spectrometer, 9:31626 (R;SU;In Russian)
Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Obninsk. Fiziko-Ehnergeticheskij Inst.
Buffer memory unit for time measurements at critical assemblies, 9:31534 (R;SU;In Russian)
TsPUP-1 digital converter of angular displacements, 9:31615 (R;SU;In Russian)
Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Serpukhov. Inst. Fiziki Vysokikh Ehnergij
Average multiplicities in deep inelastic processes and their interpretation, 9:32014 (R;SU)
Drift chamber characteristics for inclined track detection, 9:31542 (R;SU;In Russian)
Inclusive neutral pion production in interactions of positive particles with beryllium nuclei at 10.5 GeV/c, 9:31983 (R;SU;In Russian)
Modular hardware for the text and colour semigraphic information display on the TV monitors, 9:31431 (R;SU;In Russian)
Modules for creating the distributed monitoring and control subsystems, 9:31506 (R;SU;In Russian)
Observation of a structure in PHIπ^0 mass spectrum, 9:31986 (R;SU)
Radiative detection of spin 3/2 particles in e^+e^- interactions, 9:32015 (R;SU)
Study on the elastic π^{+-}p interactions at 40 GeV/c in the impact parameter representation, 9:31985 (R;SU;In Russian)
Time resolution of liquid argon detectors. Part 1. Optimal filter, 9:31543 (R;SU;In Russian)
Graz Univ. (Austria)
High-energy behaviour of scattering phase shifts for Coulomb-like potentials, 9:32059 (R;AT)
Low- and medium-energetic K^-p-interaction, 9:32034 (R;AT)
More than two static Su(3) charges on the lattice, 9:32055 (R;AT)
Nucleon-deuteron low energy parameters, 9:32009 (R;AT)
Off-shell effects in nucleon-deuteron polarization observables, 9:32231 (R;AT)
Scattering theory for explicitely time-dependent interactions, 9:32274 (R;AT;In German)
Simple approximation for eigenvalues in quantum theory, 9:32286 (R;AT)
Grenoble-1 Univ., 38 (France). Inst. des Sciences Nucleaires
Dynamic moments of inertia in Xe, Cs and Ba nuclei, 9:32107 (R;US)
Grumman Aerospace Corp., Princeton, NJ (USA)
Monte Carlo studies of tandem mirror plasmas interacting with waves in the Ion Cyclotron Range of Frequencies (ICRF). Progress report, October 1, 1982-May 18, 1984, 9:32304 (R;US)
Gulf Research and Development Co., Pittsburgh, PA (USA)
Corrosion resistant materials for coal liquefaction systems, 9:30099 (R;US)
Gulf South Research Inst., New Orleans, LA (USA)
Enhanced coal liquefaction with ammonia and amines in single and binary solvent systems. Quarterly report, September 20-December 19, 1983, 9:30137 (R;US)

H

Hamburg Univ. (Germany, F.R.). Fachbereich Physik
Study of the space-time structure of the leptonic weak charged current by measurement of the muon polarization from the reaction anti νsub(μ)+Fe->X+μ^+, 9:31987 (R;DE;In German)
Hanford Engineering Development Lab., Richland, WA (USA)
Donor flow formulation for momentum flux differencing, 9:30765 (R;US)
Evaluation of ferritic alloy Fe-2-1/4Cr-1Mo after neutron irradiation - irradiation creep and swelling, 9:31149 (R;US)
HERMES; regional radiological effects analysis. Software, 9:31674 (R;US)
LWR aerosol containment experiments (LACE) program and initial test results, 9:30873 (R;US)
Microprocessor enhanced real time manual control of an industrial robot, 9:31386 (R;US)
PSF Blind Test instructions and data packages, 9:30703 (R;US)
PSF blind test SSC, SPVC, and SVBC physics-dosimetry-metallurgy data packages, 9:30704 (R;US)
Reaction rates and neutron spectra in the FFTF at full power, 9:30847 (R;US)
Strategies for analytical applications and implementation of a multi-purpose laboratory robot, 9:31387 (R;US)
Hannover Univ. (Germany, F.R.). Fakultaet fuer Maschinenwesen
Experiments on the extraction of fuels in aqueous suspension at under to over critical conditions, 9:30147 (R;DE;In German)
Investigations on the wet collection of sulphur dioxide, 9:30175 (R;DE;In German)
Harvard Univ., Cambridge, MA (USA). Dept. of Physics
Bates GaAs polarized electron source, 9:31503 (R;US)
Health and Safety Executive, London (UK). Nuclear Installations Inspectorate

3rd international swarm seminar. Proceedings, 9:31918 (R;AT)
Institute for Energy Technology, Kjeller (Norway)
District heating model for use in regional energy planning. Thesis in cybernetics, 9:30994 (R;NO;In Norwegian)
Institute of Gas Technology, Chicago, IL (USA)
Analysis of stratigraphic barriers (caprock) between sands in the cretaceous Mesa Verde formation, US DOE Multiwell Experiment, Garfield County, Colorado, 9:30253 (R;US)
Coal conversion systems technical data book, 9:30155 (R;US)
Effects of H_2S on molten carbonate fuel cells. Progress report, October 1-December 31, 1983, 9:31046 (R;US)
Institute of Physical and Chemical Research, Wako, Saitama (Japan)
Dynamic moments of inertia in Xe, Cs and Ba nuclei, 9:32107 (R;US)
Institut Francais du Petrole (IFP), 92 - Rueil-Malmaison
Modelization of phase equilibria in alcohols-ethylene glycol-water systems. Application to dehydration of synthetic alcohol mixtures by distillation, 9:30484 (R;FR;In French)
Study of the influence of porous texture of CoO-MoO_3/Al_2O_3 catalysts on hydrotreating of Boscan crude oil, 9:30233 (R;FR;In French)
Study of the superficial sea sediments by the measurements of the reflexion coefficient, 9:30226 (R;FR;In French)
Institut National de Recherche d'Informatique et d'Automatique (INRIA), Domaine de Voluceau, 78 - Rocquencourt (France)
Numerical diffraction by a uniform grid, 9:32296 (TG;US)
Instituto de Fisica Teorica, Sao Paulo (Brazil)
Gravitation as Gauge theory of Poincare Group, 9:32045 (R;BR;In Portuguese)
INTERA Environmental Consultants, Lakewood, CO (USA)
First status report on regional ground-water flow modeling for the Paradox Basin, Utah, 9:30312 (R;US)
International Atomic Energy Agency, Seibersdorf (Austria). Laboratories
Power conditioning accessories. Construction of a delayed drop-out relay and test of constant voltage transformers, 9:31388 (R;AT)
Report on intercomparison A-14 of the determination of some mineral components and radionuclides in milk powder, 9:31690 (R;AT)
International Atomic Energy Agency, Vienna (Austria)
Agreement between the Government of Canada and the Government of the Republic of Indonesia concerning the peaceful uses of nuclear energy, 9:31014 (R;CA;In English, French)
Bituminous solidification, disposal, transport and burial of spent ion-exchange resins. Part of a coordinated programme on treatment of spent ion exchange resins. Final report for the period 1 June 1980 - 30 June 1983, 9:30334 (R;AT)
Compact K-edge densitometer, 9:30402 (R;US)
Data acquisition and analysis systems for nuclear research and applications. Current status and trends. Proceedings of an advisory group meeting organized by the IAEA and held in Vienna, Austria, 13-17 September 1982, 9:32438 (R;AT)
Development of radioimmunoassay systems for the human pituitary gland. Final report for the period 1 March 1980 - 30 April 1983, 9:31730 (R;AT)
Environmental assessment methodologies for sea dumping of radioactive wastes. Report based on the joint IAEA/IMO technical committee meeting on environmental assessment methodologies for sea dumping of radioactive wastes in co-operation with UNEP held in Vienna, 30 August - 3 September 1982, 9:30385 (R;AT)
International Centre for Theoretical Physics: scientific activities in 1982, 9:31010 (R;AT)
Passive-X-ray fluorescence determination of the plutonium and uranium ratio in burnt-up fuel. Final report for the period 1 December 1981 - 30 November 1982, 9:30290 (R;AT)
Pu-content verification by calorimetry, 9:30404 (R;US)
Radioactive waste management. Volume 3. Proceedings Series, 9:30360 (R;AT)
Radiotracer studies on the degradation and dissipation of lindane under Malaysian environment. Part of a coordinated programme on the fate of persistent pesticides in the tropics,

using radioisotopes. Final report for the period 1 September 1982 - 31 August 1983, 9:31743 (R;AT)
Regional intercomparison for quality control of radioassays used in thyroid studies. Part of a coordinated programme on quality control of techniques in in-vitro assay of thyroid related hormones. Final report for the period 1 October 1978 - 31 August 1982, 9:31744 (R;AT)
Relative radiation hazards of coal based and nuclear power plants. Final report for the period 1 December 1980 - 14 February 1983, 9:30182 (R;AT)
Sample preparation techniques in trace element analysis by X-ray emission spectroscopy, 9:31623 (R;AT)
Schistosoma mansoni; relationship between membrane turnover rates and susceptibility to immune damage. Part of a coordinated programme on preparation of irradiated vaccines against some human diseases. Final report for the period 1 December 1979 - 31 August 1982, 9:31742 (R;AT)
Water reactor fuel characterization. Part of a coordinated programme on non-destructive techniques for reactor fuel characterization. Final report for the period 15 November 1979 - 15 June 1983, 9:30818 (R;AT)

International Atomic Energy Agency, Vienna (Austria). Atomic and Molecular Data Unit
International bulletin on atomic and molecular data for fusion. No. 23, 9:32315 (R;AT)

International Atomic Energy Agency, Vienna (Austria). International Nuclear Data Committee
Measurement of the $^{235}U/^{238}U$ fission cross section ratio in the ^{235}U fission neutron spectrum, 9:32147 (R;AT)

International Atomic Energy Agency, Vienna (Austria). International Working Group on Fuel Performance and Technology for Water Reactors
IAEA specialists' meeting on power ramping and cycling behaviour of water reactor fuel. Summary report, 9:30820 (R;AT)
Specialists' meeting on internal fuel rod chemistry, 9:30819 (R;AT)

International Business Machines Corp., Armonk, NY (USA)
I/O channel interface, 9:32417 (R;US)

International Business Machines Corp., Gaithersburg, MD (USA). Federal Systems Div.
Technology assessment of materials information systems. Aluminum case study, 9:31002 (R;US)
Technology assessment of materials information systems. Volume I. Summary. Final report, 9:31003 (R;US)

International Centre for Theoretical Physics, Trieste (Italy)
Distortions in frequency spectra of signals associated with sampling-pulse shapes, 9:32412 (R;IT)
Identification of necessary and sufficient conditions for real non-negativeness of rational matrices, 9:32411 (R;IT)

International Coal Refining Co., Allentown, PA (USA)
Effect of feed gas trace components on the SRC-I hydrogen purification unit. Final technical report, 9:30133 (R;US)
Interim report on the genetic and animal toxicity testing of SRC-I products, intermediates, and waste materials, 9:30123 (R;US)
Interim report on the genetic and animal toxicity testing of SRC-I products, intermediates, and waste materials. Appendix A. Volume 1. Microbial mutagenicity evaluations (Ames Test) basic program reports, 9:30124 (R;US)
Interim report on the genetic and animal toxicity testing of SRC-I products, intermediates, and waste materials. Appendix A, Volume 3. Microbial mutagenicity evaluations (Ames Test) Option IB reports, 9:30125 (R;US)
Interim report on the genetic and animal toxicity testing of SRC-I products, intermediates, and waste materials. Appendix B. Volume 1. In vivo cytogenetics and in vitro mammalian mutagenicity (mouse lymphoma test) basic program, 9:30126 (R;US)
Interim report on the genetic and animal toxicity testing of SRC-I products, intermediates, and waste materials. Appendix C. Chemical evaluation of SRC samples for genetic toxicity testing - basic program reports, 9:30127 (R;US)
Interim report on the genetic and animal toxicity testing of SRC-I products, intermediates, and waste materials. Appendix D. Acute animal studies reports, 9:30128 (R;US)
Interim report on the genetic and animal toxicity testing of SRC-I products, intermediates, and waste materials. Appendix E. Subchronic dermal studies reports, 9:30129 (R;US)
Interim report on the genetic and animal toxicity testing of SRC-I products, intermediates, and waste materials. Appendix F. QC/QA monitoring reports, 9:30130 (R;US)
Interim report on the genetic and animal toxicity testing of SRC-I products, intermediates, and waste materials. Appendix G. Sample history and documentation, 9:30131 (R;US)
SRC-I solid product characterization. Final technical report, 9:30122 (R;US)

International Laser Systems, Inc., Orlando, FL (USA)
Optical sensing systems for robotic manipulators, 9:31373 (R;US)

International Maritime Organization, London (UK)
Environmental assessment methodologies for sea dumping of radioactive wastes. Report based on the joint IAEA/IMO technical committee meeting on environmental assessment methodologies for sea dumping of radioactive wastes in co-operation with UNEP held in Vienna, 30 August - 3 September 1982, 9:30385 (R;AT)

Iowa State Univ. of Science and Technology, Ames (USA). Dept. of Chemical Engineering
Recovery of alumina from fly ash: use of coal cleaning refuse as a mineralizer in the lime-sinter process, 9:30173 (R;US)

Iowa State Univ. of Science and Technology, Ames (USA). Dept. of Chemistry
Characterization and chemistry of vinylketene prepared by flash vacuum pyrolysis. Study of the flash vacuum pyrolysis of hydroaromatic compounds: 5,8-diphenyltetralin and the parent and substituted 5,6,11,12-tetrahydrodibenzo[a,e]cyclooctenes. Revision 1, 9:31322 (R;US)
Versatility of laser induced fluorescence line narrowing in chemical analysis, 9:31288 (R;US)

Israel Physical Society, Jerusalem
1983 annual meeting. Program and abstracts, 9:31861 (R;IL)

Italian Government, Rome
Decree of 4 November 1982 on conditions for notification of possession of special fissile materials and source materials and for keeping accounts thereof, 9:30398 (R;IT;In Italian)

Interaction of laser plasma neutral componenta with a metal surface, 9:31475 (R;SU;In Russian)

Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Computing Techniques and Automation
Multiplicity distributions of protons with intermediate energies and of fast charged particles emitted in interactions of π-mesons and protons with atomic nuclei in 1.6-10.5 GeV energy range, 9:32124 (R;XJ;In Russian)
Scanning control in the AELT-2/160 measurement system on-line with CM-4 computer, 9:31551 (R;SU;In Russian)

Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of High Energy
Application of the Moliere multiple scattering angle-lateral displacement function in Monte-Carlo calculations, 9:32223 (R;SU)

Cumulative production of tritium, ^{3}He, ^{4}He nuclei, 9:32089 (R;XJ;In Russian)
Determination of parameters of deuteron six-quark component, 9:32087 (R;SU)
Dubna synchrophasotron. Operation and improvement (quarter 3, 1982), 9:31474 (R;XJ;In Russian)
Energy model of increasing radiation and the size of an electron avalanche in a streamer chamber, 9:31554 (R;XJ;In Russian)
Equivalent rectangular pulse of high voltage power supplies for a streamer chamber, 9:31553 (R;SU;In Russian)
Experimental data on the inclusive cross sections of protons, deuterons and tritium cumulative production, 9:31990 (R;XJ;In Russian)
Field inhomogeneity measurements at pulsed heating of the winding of a superconducting magnet, 9:31494 (R;XJ;In Russian)
Inertial characteristics of cryogenic temperature sensors-dosemeters, 9:31550 (R;SU;In Russian)
Liuid hydrogen target with hydrogen recondensation by helium, 9:31508 (R;SU;In Russian)
Multiplicity distributions of π^- mesons produced in light nuclei interaction with tantalum nuclei for momentum interval 2-5 GeV/c per nucleon, 9:32142 (R;XJ;In Russian)
Possibilities of JINR synchrophasotron application to medical and biological purposes, 9:31509 (R;XJ;In Russian)
Properties of pC and pTa interactions at Psub(p)=10 GeV/c accompanied by the emission of cumulative protons and π mesons, 9:32088 (R;XJ;In Russian)
Results of analysis of circuits for pulse shapers charging in the power supply system of streamer spark chambers, 9:31552 (R;XJ;In Russian)

Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Neutron Physics
Dynamic immediate-access memory device with capacity of 16Kx24 bit, 9:31407 (R;XJ;In Russian)
Psub(1/2) and psub(3/2) components of the neutron strength function, 9:32224 (R;SU;In Russian)
Remote controlled magnetometer to measure homogeneous magnetic field, 9:31627 (R;XJ;In Russian)

Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Nuclear Problems
Acute skin reaction after fractionated irradiation, 9:31788 (R;XJ)
Data evaluation efficiency on the base of a nonuniform sample, 9:32413 (R;XJ;In Russian)
Drift chamber electronics setup for relativistic positronia studies, 9:31556 (R;XJ;In Russian)
Eigenfunctions of angular scanning via charge-coupled device-matrix, 9:32414 (R;XJ;In Russian)
πK-scattering lengths, 9:32020 (R;SU;In Russian)
Low-lying excited states of ^{128}Xe, 9:32123 (R;XJ;In Russian)
Method of experimental determination of the mean radial magnetic field component for the JINR phasotron, 9:31493 (R;XJ;In Russian)
Multicomputer version of the ALARM system for the "F" installation, 9:31512 (R;XJ;In Russian)
Multiplex gauge of the ion beam emittance, 9:31510 (R;XJ;In Russian)
Perturbation of gamma-gamma angular correlations in magnetic-tape carriers, 9:31612 (R;SU;In Russian)
$\pi\pi$-scattering lengths, 9:32019 (R;SU)
System of three-meter drift chambers operating in self-quenching mode, 9:31555 (R;XJ;In Russian)

Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Nuclear Reactions
Evoluation of radiation damage structure in molybdenum alloyed with neon atoms during post-irradiation annealing, 9:31198 (R;SU;In Russian)
Short-lived spontaneously fissioning activities produced at the sup(20, 22)Ne ion interaction with ^{249}Bk and ^{249}Cf target nuclei, 9:32152 (R;XJ;In Russian)
Simulation of thermochromotographic processes by the Monte-Carlo method, 9:31290 (R;XJ;In Russian)

Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Theoretical Physics
Differential identities and topological invariants in the Riemann, Riemann-Cartan geometries and in the spaces of the arbitrary affine connection, 9:32279 (R;SU;In Russian)
πK-scattering lengths, 9:32020 (R;SU;In Russian)
Soliton type solutions in nuclear hydrodynamics, 9:32226 (R;SU;In Russian)
Some applications of the evolution method in a coupling constant in nuclear physics, 9:32225 (R;SU;In Russian)
Two-center problem of quantum mechanics. Pt. 9. Calculation algorithm of matrix elements with m not equal to 0, 9:31951 (R;SU;In Russian)

JWK International Corp., Pittsburgh, PA (USA)
Summary of AR and TD/APT contracts and grants supported by the Office of Fossil Energy FY 83, 9:30121 (R;US)
Summary of university contracts and grants supported by the Office of Fossil Energy, FY 1983, 9:30120 (R;US)

K

Kaman Tempo, Santa Barbara, CA (USA)
Environmental impacts of dispersed and concentrated siting of coal-fired power plants. Final report, 9:30683 (R;US)

Karlsruhe Univ. (T.H.) (Germany, F.R.). Fakultaet fuer Chemie
Catalytic influence of inorganic coal compounds on the gasification of coals with hydrogen and water vapor, 9:30146 (R;DE;In German)
Comparative studies of vapor and liquid-phase impregnation of porous silicon nitride and silicon carbide materials, 9:31235 (TG;US)

Karlsruhe Univ. (T.H.) (Germany, F.R.). Fakultaet fuer Chemieingenieurwesen
Consequent reactions of carbonized coal products under hydrogen pressure, 9:30145 (R;DE;In German)
Hydroconversion of organic nitrogen compounds on refining catalysts, 9:30236 (R;DE;In German)
Hydropyrolysis of model hydrocarbons in the gaseous phase, 9:30470 (R;DE;In German)
Investigations on the deactivation of nickel catalysts and the kinetics of the simultaneous methanation and conversion of CO-rich gases under pressure, 9:30467 (R;DE;In German)
Kinetic measurements on the system olefin/hydrogen/precious metal catalyst in the pressure and temperature range of technical petroleum conversion processes, 9:30235 (R;DE;In German)

Karlsruhe Univ. (T.H.) (Germany, F.R.). Fakultaet fuer Physik
Phenomenological Lagrangian functions and pionic decays of the heavy lepton tau, 9:32016 (R;DE ;In German)

Kernforschungsanlage Juelich G.m.b.H. (Germany, F.R.). Programmgruppe Systemforschung und Technologische Entwicklung
Electric power utilization for the space heat market of households facilitating petroleum substitution, 9:31021 (R;DE;In German)

Kiel Univ. (Germany, F.R.). Medizinische Fakultaet
Experimental studies for the development of a new method for stroke volume measuring using X-ray videodensitometry, 9:31737 (R;DE;In German)

Kiel Univ. (Germany, F.R.). Rechtswissenschaftliche Fakultaet
'new' Radiation Protection Ordinance - marking the difference between application of 'radioactive substances in medical research' (Section 41 StrlschV) and 'radioactive substances or ionizing radiation in medicine and dental medicine' (Section 42 StrlschV), 9:31738 (R;DE;In German)

Producer gas: another fuel for motor transport, 9:30471 (R;US)
National Research Council, Washington, DC (USA). Commission on Engineering and Technical Systems
Report for 1981 and 1982, US National Committee on Tunneling Technology, 9:31384 (R;US)
National Rural Electric Cooperative Association, Washington, DC (USA)
Use of geothermal energy for electric power generation. Workshop proceedings, 9:30589 (R;US)
Nauchno-Issledovatel'skij Inst. Atomnykh Reaktorov, Dimitrovgrad (USSR)
Fluorination of irradiated uranium-plutonium oxide fuel in flame reactor, 9:30297 (R;SU;In Russian)
Nauchno-Issledovatel'skij Inst. Ehlektrofizicheskoj Apparatury, Leningrad (USSR)
Reports of 2. All union conference on technological problems of thermonuclear reactors. Volume 2, 9:32357 (R;SU;RU)
Naval Research Lab., Washington, DC (USA)
Extreme ultraviolet spectra of highly ionized Ge, Kr and Mo emitted by imploding plasmas, 9:32345 (R;US)
Studies of hydrogenated amorphous silicon. Yearly report, 15 August 1982-15 March 1984, 9:30509 (R;US)
Naval Research Lab., Washington, DC (USA). E.O. Hulburt Center for Space Research
Measurements of high resolution spectra on the Omega laser at Rochester University. FY 82 annual report, 9:32343 (R;US)
Naval Weapons Center, China Lake, CA (USA)
Conversion of organic wastes to unleaded, high-octane gasoline, 9:30472 (R;US)
NCB (IEA Grimethorpe) Ltd., Grimethorpe, Barnsley, South Yorkshire (UK)
Test Series 2.2: Detailed Test Plan, 9:31454 (R;US)
Nevada Univ., Las Vegas (USA). Div. of Earth Sciences
Drilling and thermal gradient measurements at US Marine Corps Air Ground Combat Center, Twentynine Palms, California. Final report, October 1, 1983-March 31, 1984, 9:30583 (R;US)
New Mexico Univ., Albuquerque (USA). Dept. of Electrical Engineering and Computer Science
Variable-speed constant-voltage constant-frequency alternator. Final report, 9:31382 (R;US)
New York Univ., NY (USA). Courant Inst. of Mathematical Sciences
Magnetohydrodynamic equilibrium and stability of stellarators, 9:32350 (R;US)
New Zealand Energy Research and Development Committee, Auckland
Coal analysis in New Zealand, 9:30165 (R;US)
Environmental effects of cooling-water discharge into the ocean, 9:31797 (R;US)
Nice Univ., 06 (France)
Analysis of a photovoltaic dwelling in remote sites, 9:30525 (R;FR;In French)
Study of photovoltaic systems adapted to dwellings connected to the electric network, 9:30526 (R;FR;In French)
Niels Bohr Inst., Copenhagen (Denmark)
Particle ratios at high transverse momentum in pp collisions at $\sqrt{s}$ = 63 GeV and correlations between high p/sub T/ identified charged particles and associated identified charged particles, 9:31980 (R;US)
Norges Vassdrags- og Elektrisitetsvesen, Oslo. Elektrisitetstilsynet
Annual report of the Electricity Inspectorate for 1982, 9:31429 (R;NO;In Norwegian)

North Carolina State Univ., Raleigh (USA)
Transient radiation hardening of CMOS LSI and VLSI memory circuits, 9:31433 (R;US)
North Dakota Univ., Grand Forks (USA)
Quantitation of the reductive cleavage of aryl ethers of SRC and coals. Final report, September 1980-March 1984 , 9:31319 (R;US)
North Dakota Univ., Grand Forks (USA). Energy Research Center
Ash and slag characterization for low-rank coals, 9:30158 (R;US)
Combustion research and ash fouling for low-rank coals, 9:30215 (R;US)
Distribution of inorganics in low-rank coals, 9:30157 (R;US)
Lignite research in North Dakota, 9:30097 (R;US)
Physical properties and moisture, 9:30156 (R;US)
Supercritical solvent extraction, 9:30115 (R;US)
Use of treated gasification wastewater in a pilot cooling tower. Phase I. Final report for the period ending January 31, 1984, 9:30116 (R;US)
Northeastern Univ., Boston, MA (USA). Coll. of Business Administration
Regional load-curve models. Volume 5. Data base. Final report, 9:31034 (R;US)
Northeastern Univ., Boston, MA (USA). Dept. of Physics
New particle searches at PEP, 9:31999 (R;US)
Northwestern Univ., Evanston, IL (USA). Dept. of Civil Engineering
Assessment of turbine-casing impact code calculations. Final report, 9:30870 (R;US)
NOXSO Corp., Paducah, KY (USA)
Evaluation of the NOXSO combined NO/sub x//SO_2 flue gas treatment process: process chemistry, reaction kinetics, sorbent performance, process design and cost analysis. Final report, 9:30171 (R;US)
Nuclear Fuel Complex, Hyderabad (India). Control Lab.
Preliminary study on the determination of boron and cadmium impurities in uranium oxide and uranium metals by inductively coupled plasma-atomic emission spectroscopy, 9:31289 (R;US)
Nuclear Regulatory Commission, Washington, DC (USA). Div. of Engineering Technology
Workshop on spent fuel/cladding reaction during dry storage, 9:30304 (R;US)
Nuclear Regulatory Commission, Washington, DC (USA). Office of Nuclear Reactor Regulation
NRC plan for cleanup operations at Three Mile Island Unit 2. Rev. 2, 9:30734 (R;US)
Safety evaluation report related to the operation of Susquehanna Steam Electric Station, Units 1 and 2 (Docket Nos. 50-387 and 50-388). Suppl.6, 9:30883 (R;US)
Nuclear Regulatory Commission, Washington, DC (USA). Office of Nuclear Regulatory Research
NRC nuclear waste geochemistry 1983, 9:30345 (R;US)
Proceedings of the eleventh water reactor safety research information meeting. Volume 1, 9:30885 (R;US)
Proceedings of the eleventh water reactor safety research information meeting. Volume 6, 9:30915 (R;US)
Transactions of the Eleventh Water Reactor Safety Research Information Meeting, 9:30884 (R;US)
NUS Corp., Gaithersburg, MD (USA)
Coal Mining Cost Model (MOD-3), 9:30200 (R;US)
Nutech, San Jose, CA (USA)
Long-term inspection requirements for PWR pump casings. Final report, 9:30731 (R;US)
NWT Corp., San Jose, CA (USA)
Effects of variations in BWR water chemistry on the electrochemical potential of stainless steel and other metals, 9:30701 (R;US)

Accurate wavelength determination through attenuation dips of strongly reflective crystals, 9:32247 (R;US)
Purdue Univ., Lafayette, IN (USA). School of Mechanical Engineering
Thermal and radiative properties of coal-ash deposits. Technical progress report No. 10, March 1-May 31, 1984, 9:30160 (R;US)
Pyros, Inc., Gaithersburg, MD (USA)
Appraisal and analysis of opportunities for a joint DOE/DOD energy demonstration program. Final report, 9:31022 (R;US)

R

Radian Corp., Austin, TX (USA)
Process gas chromatography study of a Selexol acid gas removal system. Final report Mar-Sep 82, 9:30151 (R;US)
Use of treated gasification wastewater in a pilot cooling tower. Phase I. Final report for the period ending January 31, 1984, 9:30116 (R;US)
Radian Corp., Salt Lake City, UT (USA)
Control technology assessment of petroleum refinery operations: indepth site visit report, Sigmor Three Rivers Refinery, 9:30237 (R;US)
RAND Corp., Santa Monica, CA (USA)
Industrial response to time-of-use rates: quantitative analysis of French, English and Welsh data. Final report, 9:31037 (R;US)
Raytheon Co., Wayland, MA (USA). Equipment Div.
Solid state SPS microwave generation and transmission study. Volume II. Phase II final report, appendices, 9:30527 (R;US)
Research Inst. of Colorado, Fort Collins (USA)
System controls for solar-heating and heat- and cool-storage systems. Final report, 9:30556 (R;US)
Resource Planning Associates, Inc., Washington, DC (USA)
Development of closed-cycle gas turbines in district heating applications by 2000, 9:31105 (R;US)
Diesel engine total energy system development in residential/commercial applications by 2000, 9:31056 (R;US)
Market development for advanced coal-based cogeneration systems by the year 2000. Final report, 9:31016 (R;US)
Stirling engine total energy system development in residential/commercial applications by 2000, 9:31057 (R;US)
Rhone-Poulenc, 92 - Paris (France)
Properties of polymers: some uses in electronics. Part One, 9:31245 (TG;US)
Rice Univ., Houston, TX (USA)
Raster scan algorithm for generating hidden isoparametric surfaces, 9:32408 (R;US)
Rio de Janeiro Univ. (Brazil). Inst. de Fisica
Bianchi type-I models with conformally invariant scalar field, 9:32285 (R;BR)
Fe^{3+} octahedral-site properties in ordered $LiAl_5O_8$, 9:31233 (R;BR)
Risoe National Lab., Roskilde (Denmark)
Agricultural Department annual report 1982, 9:31748 (R;DK)
Note on wind generator interaction, 9:30596 (R;DK)
Physics Department annual progress report 1 January - 31 December 1982, 9:32399 (R;DK)
R.I.T. Research Corp., Rochester, NY (USA)
Augmented heat transfer rates in utility condensers. Final report, 9:31416 (R;US)
Rochester Univ., NY (USA). Lab. for Laser Energetics
How useful are odd-integer half-harmonics, 9:32347 (R;US)
New model of Raman spectra in laser produced plasma, 9:32346 (R;US)
Nonlinear saturation of the parametric instability for three coupled oscillators, 9:32302 (R;US)
Nonlocal heat transport by non-Maxwellian electrons, 9:32303 (R;US)
Observation of scattered light between omega/2 and 3/2 omega in short wavelength laser produced plasmas, 9:32301 (R;US)
Preliminary conceptual design of Siriu, A symmetric illumination, direct drive laser fusion reactor. Final report August 8, 1983-June 1, 1984, 9:32349 (R;US)
Rochester Univ., NY (USA). Medical Center
Acute toxicity of the hydrolysis products of uranium hexafluoride (UF_6) when inhaled by the rat and guinea pig. Final report, 9:31808 (R;US)
Rockwell International Corp., Canoga Park, CA (USA). Energy Technology Engineering Center
10 MWe solar thermal central receiver pilot plant operational testing plan, 9:30533 (R;US)
Computer simulation of the thermal storage systems in the solar 10 MWe pilot plant, 9:30532 (R;US)
Rockwell International Corp., Golden, CO (USA). Wind Energy Research Center
Fatigue modeling for small wind systems: basic theory, 9:30604 (R;US)
Ruhrkohle Oel und Gas G.m.b.H., Bottrop (Germany, F.R.)
Early detection and protection measures, 9:30222 (R;DE;In German)
Rutherford Appleton Lab., Chilton (UK)
Annual report to the Laser Facility Committee 1983, 9:31409 (R;GB)
Aspects of e^+e^- physics, 9:32024 (R;GB)
Chiral Lagrangian calculation of nucleon decay modes induced by d = 5 supersymmetric operators, 9:32022 (R;GB)
Comparison of charged current cross-sections and structure functions for neutrino and antineutrino beams on hydrogen and neon, 9:31996 (R;GB)
Fusion technology research, 9:32298 (R;GB)
Interaction between the precipitating electrons and the auroral plasma, 9:31871 (R;GB)
Medium energy transfer spectrometer; a crystal monochromator design, 9:31562 (R;GB)
Reconstruction of data for an experiment using multi-gap spark chambers with six-camera optics, 9:31561 (R;GB)
Towards a realistic SUGRA-GUT, 9:32054 (R;GB)
Use of vanadium as a scattering standard for pulsed source neutron spectrometers, 9:32249 (R;GB)
Why do we need better measurements of $\sin^2$ theta, rho and gauge boson masses, 9:32023 (R;GB)

S

Samkjoeringen av Kraftverkene i Norge, Trondheim
Power pool in Norway. Annual report 1982, 9:30688 (R;NO;In Norwegian)
San Bernardino Municipal Water Dept., CA (USA)
Feasibility of geothermal direct use applications in San Bernardino, California. Final report, 9:30592 (R;US)
Sandia National Labs., Albuquerque, NM (USA)
1982 Subseabed Disposal Program: geotechnical laboratory and modeling studies. Annual report, October 1981-September 1982, 9:30351 (R;US)
1982 subseabed disposal program annual report. Thermal response studies, October 1981 through September 1982, 9:30352 (R;US)
Advanced reactor safety research quarterly report, October-December 1982. Volume 24, 9:30930 (R;US)
Analysis of a 1:8 scale steel containment model subject to internal static pressurization, 9:30952 (R;US)
Assessment of turbine-casing impact code calculations. Final report, 9:30870 (R;US)
Boolean computation of optimum hitting sets, 9:32419 (R;US)
Characterization of impurities deposited on the PDX graphite rail limiter, 9:32365 (R;US)
Circulation modeling for seabed disposal of nuclear wastes: status, progress and intercomparisons. Report of the interim meeting of the Seabed Working Group Physical Oceanography

Task Group, Cambridge, U.K., 31 August-3 September 1982, 9:30354 (R;US)
Containment analysis techniques: a state-of-the-art summary. Final report, 9:30937 (R;US)
Data acquisition and analysis system for fiber creep testing, 9:31426 (R;US)
Economic risks of nuclear power reactor accidents, 9:30939 (R;US)
Eighth international NEA/Seabed Working Group meeting Varese, Italy, May 30-June 3, 1983, 9:30356 (R;US)
Energy-resolving carbon resistance probes for plasma edge characterization, 9:32321 (R;US)
Experimental investigation of certain beam transport issues in a pulsed transmission line linear accelerator, 9:31495 (R;US)
Field tests of stress measurement techniques in rock salt, 9:30357 (R;US)
In situ tests and instrumentation in the WIPP facility, 9:30359 (R;US)
Integrity of containment penetrations under severe accident conditions, 9:30949 (R;US)
Interaction of thin erbium films with aluminum, 9:30440 (R;US)
Ion implantation damage in alkaline-earth fluorides, 9:31266 (R;US)
Lead zirconate-lead titanate (PZT) ceramics from organic-derived precursors, 9:31232 (R;US)
Liquid metal infiltration of an aluminum alloy into a packed column of B_4C particles, 9:31239 (R;US)
Measurement of frontal instability of two phase immiscible displacement in tar sands at reservoir conditions, 9:30271 (R;US)
Model compound microreactor for determination of catalytic activity, 9:30152 (R;US)
Model for economic evaluation of high energy gas fracturing, 9:30258 (R;US)
NASTRAN-based computer program for structural dynamic analysis of horizontal axis wind turbines, 9:30605 (R;US)
NEA Seabed Working Group status on site qualification for nuclear waste disposal within deep-sea sediment, 9:30355 (R;US)
Neutron damage effects in AlGaAs/GaAs solar cells, 9:30514 (R;US)
New approach to the effective stress principle, 9:31425 (R;US)
NNWSI repository operational procedures for receiving, packaging, emplacing, and retrieving high-level and transuranic waste, 9:30353 (R;US)
Nuclear Power Plant Alarm Prioritization (NPPAP). Program status report, January 1, 1983-September 31, 1983, 9:30940 (R;US)
Phenomenological uncertainties in the suspended radionuclide concentrations in containment during severe LWR accidents, 9:30947 (R;US)
Plans for a 1/6th scale reinforced concrete containment model, 9:30948 (R;US)
Post-CHF model assessment with Lehigh nonequilibrium data, 9:30950 (R;US)

Neutrino charge in the non-linear R sub(xi) gauge, 9:32031 (R;CA)
Neutrinoless double-beta decay in left-right symmetric models, 9:32026 (R;CA)
New Measurement of the $\pi \rightarrow e\nu$ branching ratio, 9:32005 (R;CA)
Note on the mixings of heavy neutrinos and muon decays, 9:32030 (R;CA)
Pion pole term in electroproduction of off-mass-shell pions, 9:32032 (R;CA)
Pion production from deuterium by the bombardment with polarized protons of 277 and 500 MeV, 9:32004 (R;CA)
Rapid stereoselective synthesis of fluorinated carbohydrates. Addition of acetyl hypofluorite to vinyl ether derivatives of sugars, 9:31324 (R;CA)
Relative energy variable in covariant nuclear wavefunctions, 9:32229 (R;CA)
Search for massive neutrinos in $\pi \rightarrow e\nu$ decay, 9:32006 (R;CA)
Spin depolarization in muonium by hydrated electrons, 9:31960 (R;CA)
Spin-conversion reaction of muonium with nickel cyclam, 9:31964 (R;CA)
Spin-spin correlations in the reaction (anti)p(anti(p)) $\rightarrow$ pnπ+ at intermediate energies, 9:32007 (R;CA)
Status of TRIUMF and plans for development, 9:31518 (R;CA)
Study of two-nucleon wave functions in ^{3}He, 9:32077 (R;CA)
Thermal effects on the photon mass, 9:32027 (R;CA)
Unitary transformations, Weyl's association and the role of canonical transformations, 9:32283 (R;CA)
TRW Energy Development Group, Redondo Beach, CA (USA)
Coal-fired MHD combustor development project, Phase IIIC. Third quarterly technical progress report, 1 January-30 April, 1984, 9:31045 (R;US)
TRW Energy Engineering Div., McLean, VA (USA)
Conceptual process designs: Union B, Paraho, and Tosco II. Naval Oil Shale Reserves management support and systems engineering project, 9:30268 (R;US)
Seismic evaluation of NOSR 2. Naval Oil Shale Reserves management support and systems engineering project, 9:30265 (R;US)
TRW Energy Systems Planning Div., McLean, VA (USA)
Conceptual process designs: Lurgi-Ruhrgas and superior circular grate, 9:30269 (R;US)
TRW, Inc., Redondo Beach, CA (USA)
Bench-scale development of the TRW process for cleaning coal (Gravimelt Process). Quarterly technical progress report, February 1984-May 1984, 9:30142 (R;US)
Microstructural stability of copper electroplate, 9:31199 (R;US)
Water-cooled liquid and solid breeder blanket concepts, 9:32341 (R;US)
Tuebingen Univ. (Germany, F.R.). Fakultaet fuer Physik
Measurement of the triple differential cross section for the ionization of inner shells by relativistic electron impact, 9:31878 (R;DE ;In German)

U

UKAEA Atomic Energy Research Establishment, Harwell. Materials Development Div.
Electrochemical decontamination of Pu contaminated stainless steel, 9:31338 (R;GB)

UKAEA Atomic Energy Research Establishment, Harwell. Nuclear Physics Div.
Nuclear Physics Division progress report. For the period 1st January to 31st December 1982, 9:31007 (R;GB)

UKAEA Culham Lab., Abingdon
Possibility of using pulsed CO_2 lasers for radiation scattering diagnostics in tokamak plasmas, 9:32333 (TG;GB)

UKAEA Dounreay Nuclear Power Development Establishment
Dounreay, 9:30766 (R;GB)

UKAEA Risley Nuclear Power Development Establishment
Stress analysis of a rotating cylinder experiment to determine crack growth in thick section steel, 9:30810 (R;GB)

UKAEA Safety and Reliability Directorate, Culcheth
SARTEMP2 - A computer program to calculate power and temperatures in a transport flask during a criticality accident, 9:31400 (R;GB)

UNC Nuclear Industries, Inc., Richland, WA (USA). Office of Surplus Facilities Management
Assessment of decommissioning alternatives for the shut-down Hanford 100 Area reactors. A Hanford production reactor decommissioning study, 9:30853 (R;US)

UNISOR, Oak Ridge, TN (USA)
Dynamic moments of inertia in Xe, Cs and Ba nuclei, 9:32107 (R;US)
Octupole shaps in nuclei, and some rotational consequences thereof, 9:32108 (R;US)

United Nations Environment Programme
Environmental assessment methodologies for sea dumping of radioactive wastes. Report based on the joint IAEA/IMO technical committee meeting on environmental assessment methodologies for sea dumping of radioactive wastes in co-operation with UNEP held in Vienna, 30 August - 3 September 1982, 9:30385 (R;AT)

United Nations Industrial Development Organization, Vienna (Austria)
Elements of some national policies for bio-technology, 9:31042 (R;US)

University of Western Ontario, London (Canada)
Functorial semantics for quantum logic. Towards a realist interpretation of logical structure in quantum mechanics, 9:32267 (R;CA)

UOP, Inc., Des Plaines, IL (USA)
Solid electrolyte oxygen sensor for aircraft hazard protection applications. Final report, 26 Jan-26 Nov 76, 9:31614 (R;US)

URS/John A. Blume and Associates, Engineers, San Francisco, CA (USA)
Alternate analysis criteria for the seismic qualification of the supplementary safety system in Reactor Building 105-L, Savannah River Plant, 9:30850 (R;US)

USAEC Division of Nuclear Materials Management, Washington, DC
Information for foreign nations, 9:30395 (R;US)

USDOE Assistant Secretary for Conservation and Renewable Energy, Washington, DC. Building Services Div.
Residential Conservation Service Evaluation Report, 9:31055 (R;US)

USDOE Assistant Secretary for Conservation and Renewable Energy, Washington, DC. Geothermal and Hydropower Technology Div.
Geothermal progress monitor. Special supplement: proceedings of the geothermal program review, 9:30574 (R;US)

High-frequency furnace. Tenth quarterly progress report for period ending March 31, 1984, 9:31453 (R;US)

PERSONAL AUTHOR INDEX

Authors' surnames are indexed in the form appearing in the abstracted publication; given names are reduced to initials. Each author entry gives the publication title and the citation number. The document type, e.g., R for Report; country of publication, e.g., US; and language of the document, e.g., In German; are given in parentheses at the end of the entry. If no language statement appears, the language is English. Tables of document types and country of publication codes appear after the indexes. For publications with multiple authors, an entry is provided for each author. Entries for the second and succeeding authors give references to the first author.

Because of problems involved in the mechanical preparation of this index, all accent marks are omitted. Changes in spelling introduced as a result of accent omission follow standard conventions.

SUBJECT INDEX

The subject index is based on the use of subject descriptors selected from a controlled thesaurus of terms (DOE/TIC-7000). Subject descriptors and qualifiers (subheadings) are selected and presented in the following format:

SUBJECT DESCRIPTOR
Qualifier
Title, (supplementary information), citation number, (R;US)

The notations in the final parentheses indicate the type of document, e.g., R for Report; the country of publication, e.g., US; and the language if other than English, e.g., In German. Tables of document types and country of publication codes appear after the indexes.

The title may be supplemented with additional words, or a phrase, if it appears additional information would be helpful. In cases for which the title contains little or no information related to the subject entry, it may be replaced entirely by the supplementary information. A qualifier is not always required, and in such cases the title will follow the unqualified subject descriptor.

The descriptors selected for use as subject terms are generally the names of specific materials, things, or processes. To the extent possible, a qualifier is selected to describe the properties of, or processes applied to, the subject term.

Index entries are selected to indicate the important ideas and concepts presented in a document, rather than words that may appear in the text. Within the available thesaurus terms, the most probable or logical place to look for typical information is selected. "See references" are included to guide users from synonymous terms or phrases to the descriptor selected as a subject heading for the concept. (e.g. Pipeline Quality Gas see HIGH BTU GAS). "See also references" are used to indicate where to find references to subject concepts that are narrower, broader, or related to a particular subject heading. To complete an exhaustive search of a given subject, all such headings should be reviewed. Copies of DOE/TIC-7000, the Subject Thesaurus, are available from the National Technical Information Service (NTIS), U. S. Department of Commerce, Springfield, VA 22161.

ALPHA BEAMS
Collimators
Optimized alpha source collimator, 9:31530 (RA;US)

ALPHA PARTICLES
Emitted by nuclei.
Dose-Response Relationships
Alpha-particle irradiations of C3H/10T1/2, 9:31756 (RA;US)
Slowing-Down
Computation of stopping powers of protons and alpha particles in multicomponent substances in a wide energy range, 9:32243 (RA;SU;In Russian)

ALPHA REACTIONS
Breakup Reactions
Search for charmed particles in neutrino induced reactions. A study of light-ion collisions at very high energy, 9:31994 (R;SE)
Capture
Resonant alpha capture by ^{7}Be and ^{7}Li, 9:32093 (J;US)
Elastic Scattering
Main features of the four nucleon interactions at medium energies and Glauber sum rules, 9:32073 (RA;HU)
Search for charmed particles in neutrino induced reactions. A study of light-ion collisions at very high energy, 9:31994 (R;SE)
Inelastic Scattering
Multiplicity distributions of π^- mesons produced in light nuclei interaction with tantalum nuclei for momentum interval 2-5 GeV/c per nucleon, 9:32142 (R;XJ;In Russian)
Multiple Production
Interaction of 2.1 GeV/c/n alpha particles with light and heavy nuclei, 9:32080 (RA;HU)
Particle Production
Hard αp and $\alpha\alpha$ interactions, 9:32075 (RA;HU)
Particle production in α-α and α-p collisions at the CERN ISR, 9:32074 (RA;HU)
Search for charmed particles in neutrino induced reactions. A study of light-ion collisions at very high energy, 9:31994 (R;SE)
Quasi-Elastic Scattering
Main features of the four nucleon interactions at medium energies and Glauber sum rules, 9:32073 (RA;HU)

ALPHA SPECTROMETERS
Design
Multidetector alpha spectroscopy analysis system, 9:31571 (J;GB)
Performance
Multidetector alpha spectroscopy analysis system, 9:31571 (J;GB)

ALTERNATE FUELS
See SYNTHETIC FUELS
ALTERNATORS
Design
Variable-speed constant-voltage constant-frequency alternator. Final report, 9:31382 (R;US)
ALUMINATES
Specific compounds, except those of significance to energy research and development, should be indexed by coordination of a descriptor of the form (CATION) COMPOUNDS and the above anion descriptor.
Microstructure
Effect of crystallization of grain boundary phase on the high temperature strength of silicon nitride ceramics. Final report, April 1, 1980-March 31, 1984 (Sialon-YAG; Sialon-cordierite), 9:31224 (R;US)
ALUMINIA
See ALUMINIUM OXIDES
ALUMINIUM
Biological Accumulation
Liming of acidified waters: a review of methods and effects on aquatic ecosystems. Final report, 9:31710 (R;US)
Chemical Reactions
Interaction of thin erbium films with aluminum, 9:30440 (R;US)
Electron Diffraction
Truncation-induced multilayer relaxation of the Al(110) surface, 9:31207 (J;US)
Electronic Structure
Truncation-induced relaxations of a high-index surface: Al(311), 9:31146 (R;US)
Etching
Reactive ion etching of aluminium/silicon, 9:30519 (J;US)
Fluid-Structure Interactions
Experimental modeling of hydrogen evolution rates from surfaces with exposed aluminum in contact with containment sprays in pressurized water reactor nuclear power plants, 9:30740 (J;US)
Information Systems
Technology assessment of materials information systems. Aluminum case study, 9:31002 (R;US)
Ion-Atom Collisions
Alpha-particle-induced, inner-shell ionization measurements for the undergraduate laboratory, 9:31972 (J;US)
Physical Radiation Effects
Thin layer activation for industry, 9:30425 (RA;SU)
Production
Industrial process models of electricity demand. Volume 4. The aluminum industry. Final report, 9:31039 (R;US)
Protective Coatings
Determination of oxide film thickness on aluminium using 14-MeV neutron activation and BET method, 9:31297 (RA;SU)
Surface Properties
Truncation-induced multilayer relaxation of the Al(110) surface, 9:31207 (J;US)
ALUMINIUM 22
Beta-Plus Decay
Study of beta-delayed two-proton emission in ^{22}Al and ^{26}P and search for new emitters, 9:32099 (R;US)
Delayed Protons
Study of beta-delayed two-proton emission in ^{22}Al and ^{26}P and search for new emitters, 9:32099 (R;US)
ALUMINIUM 27 TARGET
Proton Reactions
Cumulative production of tritium, ^{3}He, ^{4}He nuclei, 9:32089 (R;XJ;In Russian)
ALUMINIUM ALLOYS
See also ALUMINIUM BASE ALLOYS
HEUSLER ALLOYS
Magnetic Properties
Magnetic properties of N/sub p/M_4Al_9 intermetallic compounds (M = Cr, Cu) studied by Moessbauer effect magnetic susceptibility and neutron diffraction, 9:31182 (RA;IL)
Neutron Diffraction
Spin correlations and reentrant spin-glass behavior in amorphous Fe-Mn alloys. II. Dynamics, 9:31211 (J;US)
Spin Glass State
Spin correlations and reentrant spin-glass behavior in amorphous Fe-Mn alloys. II. Dynamics, 9:31211 (J;US)
X-Ray Diffraction
X-ray diffraction study of $NpAl_2$ at high pressure, 9:31183 (RA;IL)
ALUMINIUM BASE ALLOYS
Chemical Analysis
Automated controlled-potential coulometric determination of uranium, 9:31276 (R;CA)
Corrosion
Corrosion of iron, aluminum and copper-base alloys in glycols under simulated solar collector conditions, 9:30572 (J;US)
Fabrication
Liquid metal infiltration of an aluminum alloy into a packed column of B_4C particles, 9:31239 (R;US)
ALUMINIUM CHLORIDES
Reduction
Aluminum industry applications for OTEC, 9:30544 (J;US)
ALUMINIUM COMPOUNDS
See also ALUMINATES
ALUMINIUM CHLORIDES
ALUMINIUM OXIDES
Heat Storage
The attack of stainless steel by molten aluminum in a solar concentrator, 9:30573 (J;US)
Heat Transfer
The attack of stainless steel by molten aluminum in a solar concentrator, 9:30573 (J;US)
ALUMINIUM OXIDES
See also HOLLANDITE
Activation Analysis
Determination of oxide film thickness on aluminium using 14-MeV neutron activation and BET method, 9:31297 (RA;SU)
Catalytic Effects
Structure and properties of zeolite-supported $Ru_3(CO)_{12}$ catalysts, 9:30461 (RA;US)
Crystal Doping
Investigations of the crystallization process of neodymium doped YAG using radiotracers, 9:31317 (RA;SU)
Dissolution
Dissolution of aluminum-, titanium-, and zirconium-based crystalline waste form components under hydrothermal conditions, 9:30382 (J;US)
Ion Implantation
Ion implantation, ion beam mixing, and annealing studies of metals in Al_2O_3, SiC and Si_3N_4, 9:31220 (R;US)
Materials Recovery
Recovery of alumina from fly ash: use of coal cleaning refuse as a mineralizer in the lime-sinter process, 9:30173 (R;US)
Microstructure
Effect of crystallization of grain boundary phase on the high temperature strength of silicon nitride ceramics. Final report, April 1, 1980-March 31, 1984 (Sialon-YAG; Sialon-cordierite), 9:31224 (R;US)
Surface Area
Determination of oxide film thickness on aluminium using 14-MeV neutron activation and BET method, 9:31297 (RA;SU)
Thickness
Determination of oxide film thickness on aluminium using 14-MeV neutron activation and BET method, 9:31297 (RA;SU)
Wear
Observations on the sliding wear of ceramics, 9:31223 (R;US)
ALUMINUM

ALVEOLI (PULMONARY)
See LUNGS
AMBERLITE
See ORGANIC ION EXCHANGERS
AMERICIUM
Electronic Structure
Recent applications of the relativistically parameterized extended Huckel method (REX) on actinide compounds, 9:31339 (RA;IL)
Particle Resuspension
Transuranic resuspension, 9:31676 (R;US)

Radiometric Analysis
Automated in-line measurement of plutonium solutions in a plutonium purification process, 9:30407 (J;US)

AMERICIUM 241
Global Fallout
Inventories of ^{239,240}Pu, ^{241}Am, ^{137}Cs, and ^{60}Co in Columbia River sediments from Hanford to the Columbia River estuary, 9:31721 (J;US)
Production
The role of plutonium-238 in nuclear fuel cycles, 9:30711 (J;US)
Radioecological Concentration
Behavior of plutonium and americium in two groundwater systems, 9:31718 (RA;US)
Inventories of ^{239,240}Pu, ^{241}Am, ^{137}Cs, and ^{60}Co in Columbia River sediments from Hanford to the Columbia River estuary, 9:31721 (J;US)

AMERICIUM 243 TARGET
Neutron Reactions
Nuclear structure of ^{244}Am investigated with the (n,γ) reaction, 9:32154 (J;US)

AMERICIUM 244
Energy Levels
Nuclear structure of ^{244}Am investigated with the (n,γ) reaction, 9:32154 (J;US)
Thermal Neutrons
Nuclear structure of ^{244}Am investigated with the (n,γ) reaction, 9:32154 (J;US)

AMERICIUM COMPOUNDS
Diffusion
Limit diffusion coefficients and hydration (numbers) of some trivalent actinide and lanthanide ions, 9:31358 (RA;IL)
Hydration
Limit diffusion coefficients and hydration (numbers) of some trivalent actinide and lanthanide ions, 9:31358 (RA;IL)

AMES TEST

AMINO ALCOHOLS
See ALCOHOLS

AMINOETHANETHIOL
See MEA

AMMONIA
Ion-Molecule Collisions
Differential cross sections for ionization of methane, ammonia, and water vapor by high velocity ions, 9:31968 (J;US)
Muonic Molecules
μi charge exchange and muonium formation in low pressure gases, 9:31959 (R;CA)
Production
SERI Biomass Program. FY 1983 annual report, 9:30473 (R;US)
Removal
Laboratory tests of phenol removal and ammonia and hydrogen sulfide stripping from SRC-I wastewater. Final technical report, 9:30132 (R;US)

AMNION CELLS
See EMBRYONIC CELLS

ANAEROBIC DIGESTION
Research Programs
SERI Biomass Program. FY 1983 annual report, 9:30473 (R;US)

ANALOG-TO-DIGITAL CONVERTERS
Commercialization
Report on the Minisession "New developments in Flash ADC integrated circuits", 9:31449 (J;US)
Counting Rates
High sampling rate performance of Sony CX 20052 Flash ADC, 9:31447 (J;US)
Design
TsPUP-1 digital converter of angular displacements, 9:31615 (R;SU;In Russian)
Digital Systems
New developments in Flash ADC'S, 9:31448 (J;US)
Integrated Circuits
Report on the Minisession "New developments in Flash ADC integrated circuits", 9:31449 (J;US)
Market
Report on the Minisession "New developments in Flash ADC integrated circuits", 9:31449 (J;US)
Performance Testing
High sampling rate performance of Sony CX 20052 Flash ADC, 9:31447 (J;US)
Prices
Report on the Minisession "New developments in Flash ADC integrated circuits", 9:31449 (J;US)
Reliability
High sampling rate performance of Sony CX 20052 Flash ADC, 9:31447 (J;US)
Technology Assessment
New developments in Flash ADC'S, 9:31448 (J;US)
Report on the Minisession "New developments in Flash ADC integrated circuits", 9:31449 (J;US)
Technology Utilization
New developments in Flash ADC'S, 9:31448 (J;US)

ANALYSIS (ACTIVATION)

ANHARMONIC OSCILLATORS
Hartree-Fock Method
Quantum theory of anharmonic oscillators. Some exact relations between matrix elements and their use for various approximation methods, 9:32275 (R;AT)
Perturbation Theory
Quantum theory of anharmonic oscillators. A variational and systematic general approximation method, 9:32276 (R;AT)

ANIMAL FEEDS
Production
Introduction and reisolation of selected gram-positive and gram-negative bacteria from fermented edible wastes, 9:31126 (BA;US)
Process to ferment food waste and monitor the effect on harmful organisms, 9:31116 (BA;US)
Survival of viruses in fermented edible waste, 9:31117 (BA;US)
Purification
Process to ferment food waste and monitor the effect on harmful organisms, 9:31116 (BA;US)

ANIONS
See also HYDROGEN IONS I MINUS
Metastable States
Production and destruction of metastable negative ions. Progress report, September 1, 1983-August 31, 1984, 9:31874 (R;US)

ANL
Research Programs
Argonne National Laboratory 1983-1984, 9:32062 (R;US)

ANNIHILATION
Transport Theory
Effect of fluorescence, bremsstrahlung, and annihilation radiation on the spectra and energy deposition of gamma rays in bulk media, 9:30802 (J;US)

ANODES
See also PHOTOANODES
Depolarization
Chemical/hydrogen energy systems. Annual report, January 1, 1983-December 31, 1983, 9:30433 (R;US)
Sludges
Analysis of anode sludges, and their process solutions and beneficiation products, 9:31293 (R;ZA)

ANOMALONS
To probe the presence of anomalons by studying characteristics of projectile fragments in heavy ion reactions, 9:32210 (RA;HU)

ANTARES FACILITY
Alignment
Operational performance of the Antares alignment system, 9:32359 (R;US)

ANTENNAS
See also RECTENNAS

Efficiency
High accuracy radiation efficiency measurement techniques. Final technical report, 9:31428 (R;US)
Mathematical Models
Behavior of very large short pulse antennas, 9:31434 (R;US)
ANTIGEN-ANTIBODY REACTIONS
Biochemistry
Schistosoma mansoni; relationship between membrane turnover rates and susceptibility to immune damage. Part of a coordinated programme on preparation of irradiated vaccines against some human diseases. Final report for the period 1 December 1979 - 31 August 1982, 9:31742 (R;AT)
ANTIMONY ALLOYS
Crystal Growth
Crystal growth of plutonium monopnictides, 9:31356 (RA;IL)
Electric Conductivity
Transport properties of USb and UAs single crystals, 9:31185 (RA;IL)
Hall Effect
Transport properties of USb and UAs single crystals, 9:31185 (RA;IL)
Lattice Parameters
Valence transition of uranium in (U,Y)Sb, 9:31190 (RA;IL)
Magnetic Moments
Valence transition of uranium in (U,Y)Sb, 9:31190 (RA;IL)
Magnetic Properties
Magnetic properties of PuAs, PuSb and PuBi single crystals, 9:31189 (RA;IL)
Neutron diffraction study of the magnetic ordering in plutonium monopnictides PuAs PuSb, 9:31227 (RA;IL)
ANTIMONY COMPOUNDS
Catalytic Effects
Cationic polymerization of vinyl-substituted monomers with alpha, alpha, alpha', alpha' - tetraphenyl-p-xylyl biscarbonium hexachloroantimonate. Final technical report, Oct 70-Aug 71, 9:31240 (R;US)
Crystal-Phase Transformations
Nuclear quadrupole interaction studies of high pressure phase transitions in InSb, 9:31249 (RA;BR)
ANTIMUONS
See MUONS PLUS
ANTINEOPLASTIC DRUGS
See also MISONIDAZOLE
MITOMYCIN
Biological Effects
Thiol depletion and enhanced melphalan toxicity by sensitizers and BSO, 9:31806 (RA;US)
Toxicity
Chemosensitization in vitro: on the mechanism of the preincubation effect of hypoxic cell sensitizers, 9:31805 (RA;US)
ANTINEUTRINO-NUCLEON INTERACTIONS
Charged-Current Interactions
Comparison of charged current cross-sections and structure functions for neutrino and antineutrino beams on hydrogen and neon, 9:31996 (R;GB)
Deep Inelastic Scattering
Study of the space-time structure of the leptonic weak charged current by measurement of the muon polarization from the reaction anti νsub(μ)+Fe->X+μ^+, 9:31987 (R;DE;In German)
Particle Production
Azimuthal asymmetry of negatively charged hadrons in the anti $\nu N \rightarrow \mu^+ h^- X$ reaction, 9:32011 (J;SU;In Russian)
ANTIPROTON REACTIONS
Annihilation
Λ^0 production from low energy antiproton annihilations in complex nuclei, 9:32094 (J;US)
ANTRIM SHALES
See BLACK SHALES
APATITES
Petrochemistry
Comparative petrochemistry of two cogenetic monzonitic laccoliths and genesis of associated uraniferous actinolite-apatite-magnetite veins, east arm of Great Slave Lake, District of Mackenzie, 9:31850 (RA;CA)
APPLES
Waste Disposal
Utilization of apple press waste to replace fossil fuel to generate process steam, 9:31101 (BA;US)
APPLICATORS (RADIOTHERAPY)
See RADIATION SOURCES
AQUACULTURE
Mathematical Models
Program element: aquatic species, 9:30516 (RA;US)
AQUATIC ECOSYSTEMS
Liming
Liming of acidified waters: a review of methods and effects on aquatic ecosystems. Final report, 9:31710 (R;US)
Mathematical Models
Effects of acid precipitation on aquatic resources: results of modeling workshops, 9:31709 (R;US)
AQUATIC ORGANISMS
Unspecified biota characteristic of aquatic ecosystems.

Instrumentation for real-time ultrasonic sensing of arc welding characteristics, 9:31421 (R;US)
Real-time ultrasonic sensing of arc welding processes, 9:31420 (R;US)
ARCHAEOLOGICAL SPECIMENS
Chemical Analysis
Forum introduction, forum on stable isotopic and metals composition, nutrition, and human adaptation, 9:31830 (R;US)
Chemical Composition
Prehistoric variability of metal and $^{13}C/^{12}C$ content in bone: dietary and gender factors, 9:31829 (R;US)
ARGON
Atom-Atom Collisions
Temperature dependence of the de-excitation rate constants of excited rare gas atoms by atoms and molecules, 9:31949 (RA;AT)
Atom-Molecule Collisions
Temperature dependence of the de-excitation rate constants of excited rare gas atoms by atoms and molecules, 9:31949 (RA;AT)
De-Excitation
Temperature dependence of the de-excitation rate constants of excited rare gas atoms by atoms and molecules, 9:31949 (RA;AT)
Electric Discharges
Electron drift velocity and ionization and attachment coefficients in gases/mixtures for diffuse-discharge opening switches, 9:31947 (RA;AT)
Ion Drift
Calculation of ion drift and diffusion: basis set expansions with non-gaussian weight functions, 9:31936 (RA;AT)
Ion-Atom Collisions
Diffusion of lithium ions in argon, 9:31939 (RA;AT)
Investigation of energy dependent light emission cross sections for He^+-A_2 and A^+_2-He collisions and their interpretation by a Landau-Zener-model, 9:31909 (R;AT;In German)
Ion-Molecule Collisions
Determination of resonant charge transfer cross sections by drift tube techniques, 9:31930 (RA;AT)

Muonic Atoms
μ^+ charge exchange and muonium formation in low pressure gases, 9:31959 (R;CA)

ARGON 40 REACTIONS
Heavy Ion Reactions
Search for flow in the reaction Ar+Pb, 9:32140 (RA;HU)
Inclusive Interactions
Emission of light fragments in the transport model for nucleus-nucleus collisions at high energies, 9:32167 (RA;DE;In German)
Pion absorption compared to effects of compression in relativistic nucleus-nucleus collisions, 9:32179 (RA;DE;In German)

ARGON IONS
Diffusion
Transverse diffusion of mass-identified ions in their parent gases, 9:31934 (RA;AT)
Electron-Ion Collisions
Electron-impact double ionization of rare-gas ions, 9:31974 (J;US)
Ion-Atom Collisions
Investigation of energy dependent light emission cross sections for He^+-A_2 and A^+_2-He collisions and their interpretation by a Landau-Zener-model, 9:31909 (R;AT;In German)
Ion-Molecule Collisions
Collisions of singly and doubly charged ions with oxygen molecules in the energy range 1 - 1800 (3600) eV, 9:31903 (RA;AT)
Determination of resonant charge transfer cross sections by drift tube techniques, 9:31930 (RA;AT)

Interaction between the precipitating electrons and the auroral plasma, 9:31871 (R;GB)
Plasma Instability
Interaction between the precipitating electrons and the auroral plasma, 9:31871 (R;GB)

AUTOLYSIS
Tracer Techniques
Postmortum incorporation of ^{3}H-thymidine into human oral mucosa at +4°C ambient temperature. Histoautoradiographic studies, 9:31746 (R;DE;In German)

AUTOMOBILE EFFICIENCY STANDARDS
See AUTOMOBILES
STANDARDS

AUTOMOBILES
Noise Pollution Abatement
Encapsulation technology for cars of today and tomorrow, 9:31138 (R;DE;In German)

AUTOMOTIVE FUELS
Fuel Consumption
Forecast of person car fuel consumption, 9:31081 (R;FI;In Finnish)
Fuel Substitution
Producer gas: another fuel for motor transport, 9:30471 (R;US)

AUTORADIOGRAPHY
Image Processing
Evaluation of autoradiograms using a microcomputer, 9:30430 (RA;SU)

AVIATION FUELS
Chemical Properties
Properties of fuels employed in a gas turbine combustor program. Technical note, 9:30441 (R;US)
Physical Properties
Properties of fuels employed in a gas turbine combustor program. Technical note, 9:30441 (R;US)

AXIONS
Particle Production
Search for neutral, penetrating, metastable particles produced in the SLAC beam dump, 9:31982 (R;US)

AZINES
Nitration
Nitration of oximes. The nitration of azines. Final technical report, 5 Dec 49-4 Dec 51, 9:31313 (R;US)

B

B MESONS
Semileptonic Decay
Lifetime measurements and tau physics at PEP, 9:32000 (R;US)
Weak Particle Decay
Weak decays at PEP, 9:31998 (R;US)

BACKFILLING
Comparative Evaluations
Chemical aspects governing the choice of backfill materials for nuclear waste repositories, 9:30367 (J;US)
Interactions of backfill materials with cesium in a bittern brine under repository conditions, 9:30371 (J;US)
Materials Testing
Basalt as a potential waste package backfill component in a repository located within the Columbia River basalt, 9:30366 (J;US)
Interactions of backfill materials with cesium in a bittern brine under repository conditions, 9:30371 (J;US)
Performance
Backfill performance requirements--estimates from transport models, 9:30368 (J;US)

BACTERIA
See also DESULFOVIBRIO
METHANOGENIC BACTERIA
Population Density
Assessment of the microbial populations in field and test pit experiments at Elliot Lake, Ontario, Canada, 9:30344 (R;CA)
Temperature Effects
Bacterial levels as a function of operating temperatures at a municipal solid waste anaerobic digestor (Salmonella, enterobacteriacea), 9:30475 (BA;US)

BAG MODEL
Pomeranchuk Particles
Pomeron colour structure and hadron scattering on the six-quark deuteron configuration, 9:32188 (RA;HU)
Solitons
Soliton bag: dynamics and the quark plasma, 9:32198 (RA;HU)

BAGASSE
Anaerobic Digestion
Biogas recovery from sugarcane wastes, 9:30477 (BA;US)
Hydrogenation
Experiments on the extraction of fuels in aqueous suspension at under to over critical conditions, 9:30147 (R;DE;In German)

BAGHOUSES
Design
Baghouse design and operating considerations at North Valmy Unit One, 9:30681 (RA;US)
BANKS
See COMMERCIAL BUILDINGS
BARIUM
Leaching
Continuous-flow leaching studies of crushed and cored SYNROC, 9:30372 (J;US)
BARIUM 128
Energy Levels
Dynamic moments of inertia in Xe, Cs and Ba nuclei, 9:32107 (R;US)
Moment of Inertia
Dynamic moments of inertia in Xe, Cs and Ba nuclei, 9:32107 (R;US)
BARIUM 130
Energy Levels
Dynamic moments of inertia in Xe, Cs and Ba nuclei, 9:32107 (R;US)
Moment of Inertia
Dynamic moments of inertia in Xe, Cs and Ba nuclei, 9:32107 (R;US)
BARIUM 131
Internal Conversion
Internal conversion electrons in sup(131)La decay, 9:32119 (RA;SU;In Russian)
BARIUM FLUORIDES
Ion Implantation
Ion implantation damage in alkaline-earth fluorides, 9:31266 (R;US)
BARSTOW SOLAR PILOT PLANT
10-MW solar central receiver pilot plant at Barstow, California.
Heliostats
10 MWe solar thermal central receiver pilot plant. Collector subsystem functional test report, 9:30537 (R;US)
Collector subsystem, collector system functional test: Test Procedure 111. Revision 1, 9:30540 (R;US)
Heliostat controller software source listing: version All-Barstow, 9:30539 (R;US)
Operations instructions heliostat field subsystem for 10 megawatt solar power systems/central receiver system, 9:30536 (R;US)
Planning
10 MWe solar thermal central receiver pilot plant. Phase II, planning, 9:30531 (R;US)
Program Management
10 MWe solar thermal central receiver pilot plant: project management plan, 9:30535 (R;US)
Project charter: 10 MWe solar thermal central receiver pilot plant, 9:30534 (R;US)
Testing
10 MWe solar thermal central receiver pilot plant operational testing plan, 9:30533 (R;US)
Thermal Energy Storage Equipment
Computer simulation of the thermal storage systems in the solar 10 MWe pilot plant, 9:30532 (R;US)
Tower Focus Collectors
Collector subsystem, collector system functional test: Test Procedure 111. Revision 1, 9:30540 (R;US)
BARYON NUMBER 2 RESONANCES
See DIBARYON RESONANCES
BASALT
Materials Testing
Basalt as a potential waste package backfill component in a repository located within the Columbia River basalt, 9:30366 (J;US)
BATTERIES (ELECTRIC)
See ELECTRIC BATTERIES
BATTERIES (ISOTOPIC)
See RADIOISOTOPE BATTERIES
BEAM BENDING MAGNETS
Deformation
Forces on the conductors of the Arc AG Magnet, 9:31498 (R;US)
BEAM EMITTANCE
Beam Scanners
Multiplex gauge of the ion beam emittance, 9:31510 (R;XJ;In Russian)
Measuring Methods
Multiplex gauge of the ion beam emittance, 9:31510 (R;XJ;In Russian)
BEAM NEUTRALIZATION
Electron Spectroscopy
Comparison between measured and calculated ion neutralization electron spectra, 9:31884 (RA;AT)
BEAM PERVEANCE
See BEAM EMITTANCE
BEAM-PLASMA SYSTEMS
Mass Spectroscopy
Physical principles and design of the ATOS device, 9:31950 (RA;SU;In Russian)
BEAVER VALLEY-1 REACTOR
Radioactivity Transport
Coolant chemistry effects on radioactivity at two pressurized water reactor plants, 9:30730 (R;US)
BELGIAN REACTOR 2
See BR-2 REACTOR
BELOYARSK-3 REACTOR
Fuel Assemblies
Flowrate and wall shear stress distribution calculation in the side and corner areas of BN-600-type fuel subassembly in the laminar approach, 9:30768 (R;CS;RU)
BELT CONVEYORS
Design
Dimensioning of conveyor roads, 9:31395 (R;DE;In German)
Repair
Changing of a prevolcanized refuse cord belt, 9:30201 (R;DE;In German)
BENTONITE
Geochemistry
Geochemistry of the Dakota Formation of northwestern New Mexico: relevance to radioactive waste studies, 9:30365 (J;US)
BENZENE
Pyrolysis
Hydropyrolysis of model hydrocarbons in the gaseous phase, 9:30470 (R;DE;In German)
BENZIDINE
Health Hazards
Health hazard evaluation report No. HETA 81-399-1172, Ridgway Color Company, Ridgway, Pennsylvania, 9:31713 (R;US)
Indoor Air Pollution
Health hazard evaluation report No. HETA 81-399-1172, Ridgway Color Company, Ridgway, Pennsylvania, 9:31713 (R;US)
Industrial Medicine
Health hazard evaluation report No. HETA 81-399-1172, Ridgway Color Company, Ridgway, Pennsylvania, 9:31713 (R;US)
BERKELEY BEVALAC
See BEVALAC
BERKELIUM 249
Spontaneous Fission
Short-lived spontaneously fissioning activities produced at the sup(20, 22)Ne ion interaction with ^{249}Bk and ^{249}Cf target nuclei, 9:32152 (R;XJ;In Russian)
BERKELIUM 249 TARGET
Neon 20 Reactions
Short-lived spontaneously fissioning activities produced at the sup(20, 22)Ne ion interaction with ^{249}Bk and ^{249}Cf target nuclei, 9:32152 (R;XJ;In Russian)
Neon 22 Reactions
Short-lived spontaneously fissioning activities produced at the sup(20, 22)Ne ion interaction with ^{249}Bk and ^{249}Cf target nuclei, 9:32152 (R;XJ;In Russian)

BERYLLIUM
Kaon Plus Reactions
Inclusive neutral pion production in interactions of positive particles with beryllium nuclei at 10.5 GeV/c, 9:31983 (R;SU;In Russian)
Pion Plus Reactions
Inclusive neutral pion production in interactions of positive particles with beryllium nuclei at 10.5 GeV/c, 9:31983 (R;SU;In Russian)
Proton Reactions
Inclusive neutral pion production in interactions of positive particles with beryllium nuclei at 10.5 GeV/c, 9:31983 (R;SU;In Russian)
BERYLLIUM 7
Cluster Model
Calculation of nuclear verter constant of ^{7}Be-^{3}He^{4}He, 9:32084 (RA;SU;In Russian)
BERYLLIUM 7 TARGET
Alpha Reactions
Resonant alpha capture by ^{7}Be and ^{7}Li, 9:32093 (J;US)
BERYLLIUM 9 TARGET
Deuteron Reactions
Study of vector analyzing power of the ^{9}Be(d,p_0)^{10}Be and 9Be (d,p_1)^{10}Be * (3.37 MeV) reactions at E/subα)/=2.0-2.8 MeV, 9:32086 (RA;SU;In Russian)
BERYLLIUM MODERATORS
See BERYLLIUM
BESSEL DIFFERENTIAL EQUATION
See FOKKER-PLANCK EQUATION
BETA BACKSCATTERING GAGES

BETA SOURCES
Labelling
Method of constant metrological label and summary correction factor for measurement of radioactive concentration of pure β-emitters, 9:31545 (RA;SU;In Russian)
BETA SPECTROMETERS
High-Purity GE Detectors
Possibility of study on the double neutrinoless beta decay by means of semiconductor beta spectrameters, 9:31548 (RA;SU;In Russian)
BEVALAC
Accelerator Facilities
Using MUSIC to study relativistic nuclear collisions, 9:31507 (RA;HU)
BINARY ALLOY SYSTEMS
Order Parameters
Self-consistent approximation for muffin-tin models of random substitutional alloys with environmental disorder, 9:32263 (J;US)
Phase Transformations
Kinetics of a first-order phase transition: Computer simulations and theory, 9:32292 (J;US)
BINARY MIXTURES
Thermodynamic Properties
Thermodynamic behavior of coal liquids in the presence of coal solids characterization of IOM and ASH. Third quarterly progress report, February 1, 1984-May 1, 1984, 9:30140 (R;US)
Thermophysical properties correlations and pseudocomponent characterization parameter estimation for fossil fluids. Third quarterly report, March 1, 1984-May 31, 1984, 9:30141 (R;US)
Vapor Pressure
Thermodynamic behavior of coal liquids in the presence of coal solids characterization of IOM and ASH. Third quarterly progress report, February 1, 1984-May 1, 1984, 9:30140 (R;US)
Viscosity
Thermophysical properties correlations and pseudocomponent characterization parameter estimation for fossil fluids. Third quarterly report, March 1, 1984-May 31, 1984, 9:30141 (R;US)
BIOCONVERSION
See also ANAEROBIC DIGESTION
Constraints
Constraints to bio-energy development, 9:30521 (J;US)
Technology Assessment
Constraints to bio-energy development, 9:30521 (J;US)
BIOGAS
See METHANE
BIOLOGICAL DOSEMETERS
Evaluation
Radiation-induced chromosome aberrations in A-bomb survivors: a key to biological dosimetry, 9:31772 (RA;US)
BIOLOGICAL RADIATION EFFECTS
Biological Models

Biological Repair
Model theory studies on cell damaging and repair in X-ray experiments, 9:31786 (R;DE;In German)
Mathematical Models
Model theory studies on cell damaging and repair in X-ray experiments, 9:31786 (R;DE;In German)
BIOLOGICAL REACTORS
See BIOREACTORS
BIOMASS
Bioconversion
Constraints to bio-energy development, 9:30521 (J;US)
Energy Source Development
Constraints to bio-energy development, 9:30521 (J;US)
Gasification
Use of catalysts in biomass gasification, 9:30481 (J;US)
Health Hazards
Health implications of unconventional energy production and use, 9:30588 (J;US)
National Program Plans
Elements of some national policies for bio-technology, 9:31042 (R;US)
BIOMASS PLANTATIONS
Cost Benefit Analysis
Economic and energy analysis of poplar intensive cultures in the Lake States, 9:31043 (R;US)
Energy Analysis
Economic and energy analysis of poplar intensive cultures in the Lake States, 9:31043 (R;US)
Irrigation
Feasibility of using municipal wastewater and waste heat to maximize biomass production in energy plantations. Annual progress report, May 15, 1978-March 1, 1981, 9:30510 (R;US)
BIOMEDICAL RADIOGRAPHY
See also INDUSTRIAL RADIOGRAPHY.
Meetings
Fourth scientific practical conference of the roentgenologists, radiologists and radiobiologists from North Bulgaria. Abstracts, 9:31785 (R;BU)
Radiation Protection
'new' Radiation Protection Ordinance - marking the difference between application of 'radioactive substances in medical research' (Section 41 StrlschV) and 'radioactive substances or ionizing radiation in medicine and dental medicine' (Section 42 StrlschV), 9:31738 (R;DE;In German)
BIOREACTORS
Prior to March 1983 this concept was indexed to CHEMICAL REACTORS.
Performance
Fixed-film, fluidized-bed bioreactors for biooxidation of coal gasification wastewaters, 9:30169 (R;US)
BIPHENYLDIAMINE
See BENZIDINE
BIS(2-ETHYLHEXYL)PHOSPHORIC ACID
See HDEHP
BISMUTH
Material Balance
Elemental partitioning in ash depositories and material balances for a coal burning facility by spark source mass spectrometry, 9:30167 (J;US)

BISMUTH ALLOYS
Crystal Growth
Crystal growth of plutonium monopnictides, 9:31356 (RA;IL)
Magnetic Properties
Magnetic properties of PuAs, PuSb and PuBi single crystals, 9:31189 (RA;IL)
BISMUTH COMPOUNDS
Crystal Field
Experimental study of the electric field gradient in In_3Bi_5, 9:31150 (RA;BR)
Nuclear quadrupole interaction study of high pressure phase transition in In-Bi intermetallic compounds, 9:31152 (RA;BR)
BITUMENS
Recovery
Santa Rosa Oil Sands Project. Final technical report, 9:30270 (R;US)
Resource Assessment
Tar-sand potential of selected areas in Carter and Murray Counties, South-Central Oklahoma, 9:30264 (R;US)
BITUMINOUS COAL
Combustion
Coal desulfurization during the combustion of coal/oil/water emulsions: an economic alternative clean liquid fuel. Final report, 9:30172 (R;US)
Desulfurization
Coal desulfurization during the combustion of coal/oil/water emulsions: an economic alternative clean liquid fuel. Final report, 9:30172 (R;US)
Oxidation
Novel analytical approaches to coal beneficiation. Quarterly report, 9:30162 (R;US)
Solvent Extraction
Novel analytical approaches to coal beneficiation. Quarterly report, 9:30162 (R;US)
BLACK COAL
See also BITUMINOUS COAL
Hydrogenation
Experiments on the extraction of fuels in aqueous suspension at under to over critical conditions, 9:30147 (R;DE;In German)
BLACK COATINGS
Stability
optical properties, thermal stability and characterization of cobalt Oxide films, 9:30571 (J;US)
Thermal Degradation
optical properties, thermal stability and characterization of cobalt Oxide films, 9:30571 (J;US)
BLACK SHALES
Explosive Fracturing
New borehole fracturing technique improves gas production, 9:30259 (RA;US)
BLADES (TURBINES)

BONNEVILLE POWER ADMINISTRATION

Environmental Impacts
Bonneville Power Administration: 1979 wholesale rate increase. Final environmental impact statement, 9:31030 (R;US)

Magnetic Energy Storage
Commissioning tests of the Bonneville Power Administration 30 MJ superconducting magnetic energy storage unit, 9:30649 (R;US)

Rate Structure
Bonneville Power Administration: 1979 wholesale rate increase. Final environmental impact statement, 9:31030 (R;US)

BORIC ACID

Fluid-Structure Interactions
Experimental modeling of hydrogen evolution rates from surfaces with exposed aluminum in contact with containment sprays in pressurized water reactor nuclear power plants, 9:30740 (J;US)

BOROHYDRIDES
Specific compounds, except those of significance to energy research and development, should be indexed by coordination of a descriptor of the form (CATION) COMPOUNDS and the above anion descriptor.

Chemical Preparation
Uranium III and IV borohydrides in solution. Applied synthesis of new uranium III compounds, 9:31359 (RA;IL;In French)

BORON

Autoradiography
Quantitative autoradiography of semiconductor basic materials, 9:31300 (RA;SU)
Study of boron diffusion in high temperature Ni-base alloys by means of solid-state track detectors, 9:31303 (RA;SU)

Diffusion
Study of boron diffusion in high temperature Ni-base alloys by means of solid-state track detectors, 9:31303 (RA;SU)

Emission Spectroscopy
Preliminary study on the determination of boron and cadmium impurities in uranium oxide and uranium metals by inductively coupled plasma-atomic emission spectroscopy, 9:31289 (R;US)

Spectrophotometry
Analytical methods for the determination of boron in reactor materials programme, 9:31278 (R;IN)

BORON 10

Fission Spectra
Measurements of structural material capture to uranium-235 fission rate ratios in an intermediate spectrum assembly, 9:30785 (J;US)

BORON 10 TARGET

Photonuclear Reactions
Photodisintegration of the ^{11}B nucleus, 9:32082 (RA;SU;In Russian)

BORON 11

Energy Levels
Resonant alpha capture by ^{7}Be and ^{7}Li, 9:32093 (J;US)

Proton Reactions
Large Pauli-blocking and virtual channel effects in proton radiative capture, 9:32095 (J;US)

BORON 11 TARGET

Photonuclear Reactions
Photodisintegration of the ^{11}B nucleus, 9:32082 (RA;SU;In Russian)

BORON ALLOYS

Amorphous State
Neutron- and X-ray diffraction investigations for the metallic glasses $Ni_{81}B_{19}$ and $Co_{80}P_{20}$, 9:31172 (R;DE;In German)

Neutron Diffraction
Spin correlations and reentrant spin-glass behavior in amorphous Fe-Mn alloys. II. Dynamics, 9:31211 (J;US)

Spin Glass State
Spin correlations and reentrant spin-glass behavior in amorphous Fe-Mn alloys. II. Dynamics, 9:31211 (J;US)

BORON CARBIDES

Chemical Radiation Effects
The behavior of a B_4C-phenolic and a glass-fiber-reinforced B_4C-phenolic composite in a spent nuclear fuel storage pool, 9:30311 (J;US)

Electric Conductivity
Conduction mechanism in boron carbide, 9:31234 (J;US)

Fabrication
Liquid metal infiltration of an aluminum alloy into a packed column of B_4C particles, 9:31239 (R;US)

Hall Effect
Conduction mechanism in boron carbide, 9:31234 (J;US)

Materials Testing
The behavior of a B_4C-phenolic and a glass-fiber-reinforced B_4C-phenolic composite in a spent nuclear fuel storage pool, 9:30311 (J;US)

Physical Radiation Effects
The behavior of a B_4C-phenolic and a glass-fiber-reinforced B_4C-phenolic composite in a spent nuclear fuel storage pool, 9:30311 (J;US)

Thermoelectric Properties
Conduction mechanism in boron carbide, 9:31234 (J;US)

BORON CHLORIDES

Catalytic Effects
Reactive ion etching of aluminium/silicon, 9:30519 (J;US)

BORON IONS

Ion-Molecule Collisions
Collisions of singly and doubly charged ions with oxygen molecules in the energy range 1 - 1800 (3600) eV, 9:31903 (RA;AT)

BOROSILICATE GLASS

Chemical Properties
Vitrified high-level waste, 9:30336 (RA;DK)

Comparative Evaluations
Comparative leaching behavior of SYNROC B and a borosilicate glass, 9:30376 (J;US)
Leaching
Comparative leaching behavior of SYNROC B and a borosilicate glass, 9:30376 (J;US)
MCC-1: a standard leach test for nuclear waste forms, 9:30374 (J;US)
Physical Properties
Vitrified high-level waste, 9:30336 (RA;DK)
Physical Radiation Effects
Nature of some paramagnetic centers in electron-irradiated glasses, 9:31261 (RA;SU;In Russian)

Blowers
EPRI research on power plant mechanical auxiliaries, 9:30702 (R;US)
Burnup
Fuel cycle cost considerations of increased discharge burnups, 9:30710 (J;US)
Containment
Containment analysis techniques: a state-of-the-art summary. Final report, 9:30937 (R;US)
Containment Buildings
Integrity of containment penetrations under severe accident conditions, 9:30949 (R;US)
Containment Systems
BWR torus decontamination and resulting radwaste impact, 9:30839 (RA;US)
Numerical simulation of boiling water reactor ventclearing hydrodynamics, 9:30712 (J;US)
Phenomenological uncertainties in the suspended radionuclide concentrations in containment during severe LWR accidents, 9:30947 (R;US)
Decontamination
Decontamination impacts on waste management and disposal, 9:30929 (RA;US)
Waste arising from a dilute chemical decontamination, 9:30840 (RA;US)
Depressurization Systems
FRANTIC II: applications to standby safety systems, 9:30936 (R;US)
Dryout
TRAC-BD1/MOD1 post-dryout wall heat transfer, 9:30865 (R;US)
ECCS
Modelling of simulated clad ballooning blockages in the THETIS Rig at AEE Winfrith, 9:30901 (RA;US)
Steam line break, jet pump drive line break and natural circulation tests in ROSA-III program for BWR LOCA/ECCS integral tests, 9:30892 (RA;US)
Electric Motors
EPRI research on power plant mechanical auxiliaries, 9:30702 (R;US)
Engineered Safety Systems
Computerized surveillance test guide system for BWR power plant, 9:30831 (J;US)
Fuel Assemblies
Comparison of advanced BWR fuel designs with current standard designs. Final report, 9:30700 (R;US)
Demonstration of 9x9 assemblies for BWRs. Final report, 9:30699 (R;US)
Fuel Cycle
Boiling water reactor cycle extension operation, 9:30708 (J;US)
Fuel cycle cost considerations of increased discharge burnups, 9:30710 (J;US)
Fuel Element Clusters
Influence of partial blockage of a BWR bundle on heat transfer, cladding temperature, and quenching during bottom flooding or top spraying under simulated LOCA conditions, 9:30709 (J;US)
Fuel Management
The role of plutonium-238 in nuclear fuel cycles, 9:30711 (J;US)
Heat Transfer
Experimental measurement of axially varying vapor superheats in convective film boiling, 9:30898 (RA;US)
Inverted annular two-phase flow experiments and modeling (phenomenological modeling of two-phase flow in water reactor), 9:30899 (RA;US)
Proceedings of the eleventh water reactor safety research information meeting. Volume 1, 9:30885 (R;US)
Heaters
EPRI research on power plant mechanical auxiliaries, 9:30702 (R;US)
HPCI
FRANTIC II: applications to standby safety systems, 9:30936 (R;US)
Hydraulics
Proceedings of the eleventh water reactor safety research information meeting. Volume 1, 9:30885 (R;US)
In Core Instruments
Wide range neutron monitor, 9:30827 (J;US)
Loss of Coolant
BWR full integral simulation test (FIST) pretest predictions with TRACBO2, 9:30890 (RA;US)
COBRA-TF: flow blockage heat transfer program, 9:30896 (RA;US)
Influence of partial blockage of a BWR bundle on heat transfer, cladding temperature, and quenching during bottom flooding or top spraying under simulated LOCA conditions, 9:30709 (J;US)
Modelling of simulated clad ballooning blockages in the THETIS Rig at AEE Winfrith, 9:30901 (RA;US)
Steam line break, jet pump drive line break and natural circulation tests in ROSA-III program for BWR LOCA/ECCS integral tests, 9:30892 (RA;US)
Two-region vapor generation rate model for convective film boiling, 9:30951 (R;US)
Neutron Monitors
Wide range neutron monitor, 9:30827 (J;US)
Pipes
Impact analyses after pipe rupture, 9:30955 (R;US)
Pressure Suppression
Numerical simulation of boiling water reactor ventclearing hydrodynamics, 9:30712 (J;US)
Pressure Vessels
PSF blind test SSC, SPVC, and SVBC physics-dosimetry-metallurgy data packages, 9:30704 (R;US)
Primary Coolant Circuits
A mechanism of radioactive corrosion product buildup on the stainless steel surface used in the primary cooling systems of boiling water reactors, 9:30705 (J;US)
Effects of variations in BWR water chemistry on the electrochemical potential of stainless steel and other metals, 9:30701 (R;US)
Particulate transport theory: relationship to sample system design, 9:30694 (RA;US)
Reactor crud sampling, 9:30696 (RA;US)
Sampling of metallic impurities in BWR's, 9:30697 (RA;US)
Use of ion exchange filters for corrosion product sampling, 9:30695 (RA;US)
Wear measurements of nuclear power plant components. Final report, 9:30698 (R;US)
Pumps
EPRI research on power plant mechanical auxiliaries, 9:30702 (R;US)
Reactor Accidents
Economic risks of nuclear power reactor accidents, 9:30939 (R;US)
EPRI source term research, 9:30912 (RA;US)

Integrity of containment penetrations under severe accident conditions, 9:30949 (R;US)
Measuring radioiodine in the environment after a nuclear power plant accident, 9:30923 (RA;US)
Phenomenological uncertainties in the suspended radionuclide concentrations in containment during severe LWR accidents, 9:30947 (R;US)
Post-CHF model assessment with Lehigh nonequilibrium data, 9:30950 (R;US)

Reactor Components
IPRDS: component histories and nuclear plant aging, 9:30714 (R;US)
Wear measurements of nuclear power plant components. Final report, 9:30698 (R;US)

Reactor Control Systems
Computerized surveillance test guide system for BWR power plant, 9:30831 (J;US)
Proceedings of the eleventh water reactor safety research information meeting. Volume 6, 9:30915 (R;US)

Reactor Cooling Systems
Damping test results for straight sections of 3-inch and 8-inch unpressurized pipes, 9:30941 (R;US)
Dynamic analysis of the condensate feedwater system in boiling water reactor plants, 9:30707 (J;US)
Recent observations of cracks in large diameter BWR piping: analysis and remedial actions, 9:30913 (RA;US)

Reactor Core Disruption
Heat transfer and fluid dynamics under simulated degraded core conditions, 9:30900 (RA;US)
Status of the IDCOR program, 9:30888 (RA;US)

Reactor Cores
The role of plutonium-238 in nuclear fuel cycles, 9:30711 (J;US)

Reactor Decommissioning
Evaluation of nuclear facility decommissioning projects program, 9:30924 (RA;US)
Overview of decontamination as a precursor to decommissioning, 9:30925 (RA;US)

Reactor Fueling
Boiling water reactor cycle extension operation, 9:30708 (J;US)

Reactor Internals
Moving force on a fluid supported beam, 9:30867 (R;US)

Reactor Kinetics
BWR full integral simulation test (FIST) pretest predictions with TRACBO2, 9:30890 (RA;US)
The role of plutonium-238 in nuclear fuel cycles, 9:30711 (J;US)

Reactor Materials
Effects of variations in BWR water chemistry on the electrochemical potential of stainless steel and other metals, 9:30701 (R;US)
PSF blind test SSC, SPVC, and SVBC physics-dosimetry-metallurgy data packages, 9:30704 (R;US)
PSF Blind Test instructions and data packages, 9:30703 (R;US)

Reactor Safety
BWR full integral simulation test (FIST) pretest predictions with TRACBO2, 9:30890 (RA;US)
COBRA-TF: flow blockage heat transfer program, 9:30896 (RA;US)
Decontamination impacts on waste management and disposal, 9:30929 (RA;US)

EPRI source term research, 9:30912 (RA;US)
Evaluation of nuclear facility decommissioning projects program, 9:30924 (RA;US)
General outline of the Italian nuclear regulatory research programs, 9:30887 (RA;US)
Heat transfer and fluid dynamics under simulated degraded core conditions, 9:30900 (RA;US)
Inverted annular two-phase flow experiments and modeling (phenomenological modeling of two-phase flow in water reactor), 9:30899 (RA;US)
Light water reactor safety research trends at EPRI, 9:30909 (RA;US)
Modelling of simulated clad ballooning blockages in the THETIS Rig at AEE Winfrith, 9:30901 (RA;US)
Proceedings of the eleventh water reactor safety research information meeting. Volume 1, 9:30885 (R;US)
Proceedings of the eleventh water reactor safety research information meeting. Volume 6, 9:30915 (R;US)
Review of light water reactor safety through the Three Mile Island accident, 9:30944 (R;US)
Status of the IDCOR program, 9:30888 (RA;US)
Steam line break, jet pump drive line break and natural circulation tests in ROSA-III program for BWR LOCA/ECCS integral tests, 9:30892 (RA;US)
Thermal-hydraulic analysis of steam generators: the ATHOS code, 9:30914 (RA;US)
Transactions of the Eleventh Water Reactor Safety Research Information Meeting, 9:30884 (R;US)

Reactor Shutdown
Boiling water reactor cycle extension operation, 9:30708 (J;US)

Safeguards
Proceedings of the eleventh water reactor safety research information meeting. Volume 6, 9:30915 (R;US)

Seismic Effects
Moving force on a fluid supported beam, 9:30867 (R;US)

Spent Fuel Elements
Neutron emission characteristics of spent boiling water reactor fuel, 9:30706 (J;US)

Spent Fuel Storage
Performance of artificially defected LWR fuel rods in an unlimited dry air storage atmosphere, 9:30303 (RA;US)

Steam Generators
Thermal-hydraulic analysis of steam generators: the ATHOS code, 9:30914 (RA;US)

Steam Separators
Steam separators development: experimental programs from screening to actual environment tests, 9:30903 (RA;US)

Steam Systems
Damping test results for straight sections of 3-inch and 8-inch unpressurized pipes, 9:30941 (R;US)
Proceedings: workshop on corrosion product sampling from hot water systems, 9:30693 (R;US)

Test Facilities
Influence of partial blockage of a BWR bundle on heat transfer, cladding temperature, and quenching during bottom flooding or top spraying under simulated LOCA conditions, 9:30709 (J;US)

Transients
Post-CHF model assessment with Lehigh nonequilibrium data, 9:30950 (R;US)

Valves
EPRI research on power plant mechanical auxiliaries, 9:30702 (R;US)

Waste Oils
Management of oil in radwaste systems, 9:30329 (RA;US)

BYRON-1 REACTOR

Coolant Cleanup Systems
Reactor coolant high-temperature filtration. Volume 3. Conceptual system designs and licensing concerns. Final report, 9:30719 (R;US)

C

CABLES (ELECTRIC)
See ELECTRIC CABLES

CADMIUM

Emission Spectroscopy
Preliminary study on the determination of boron and cadmium impurities in uranium oxide and uranium metals by inductively coupled plasma-atomic emission spectroscopy, 9:31289 (R;US)

Material Balance
Elemental partitioning in ash depositories and material balances for a coal burning facility by spark source mass spectrometry, 9:30167 (J;US)

CADMIUM 109
Counting Techniques
Measurement of the ^{109}Cd radioactivity in a source by the 4Te-x coincidence method, 9:31287 (RA;SU;In Russian)
CADMIUM 111
Crystal Field
Nuclear quadrupole interaction study of high pressure phase transition in In-Bi intermetallic compounds, 9:31152 (RA;BR)
Electric Fields
Experimental study of the electric field gradient in In_5Bi_3, 9:31150 (RA;BR)
CADMIUM 115
Biological Accumulation
Investigation of biokinetics of cadmium in the mussel in various environmental conditions, 9:31801 (R;TR;In Turkish)
Biological Half-Life
Investigation of biokinetics of cadmium in the mussel in various environmental conditions, 9:31801 (R;TR;In Turkish)
Uptake
Investigation of biokinetics of cadmium in the mussel in various environmental conditions, 9:31801 (R;TR;In Turkish)
CADMIUM SULFIDES
Physical Radiation Effects
EPR in iron-doped gamma irradiated cadmium sulfide single crystals, 9:31262 (RA;SU;In Russian)
CALCINED WASTES
Chemical Composition
Leaching properties and chemical composition of calcines produced at the Idaho Chemical Processing Plant, 9:30375 (J;US)
Chemical Properties
Leaching properties and chemical composition of calcines produced at the Idaho Chemical Processing Plant, 9:30375 (J;US)
Leaching
Leach testing of Idaho Chemical Processing Plant final waste forms, 9:30378 (J;US)
Leaching properties and chemical composition of calcines produced at the Idaho Chemical Processing Plant, 9:30375 (J;US)
Physical Properties
Leaching properties and chemical composition of calcines produced at the Idaho Chemical Processing Plant, 9:30375 (J;US)
CALCIUM
Leaching
Continuous-flow leaching studies of crushed and cored SYNROC, 9:30372 (J;US)
Mineral Cycling
Helminthosporium maydis T toxin decreased calcium transport into mitochondria of susceptible corn, 9:31747 (J;US)
Sputtering
Influence of oxygen partial pressure on the sputtering on metastable Ca-atoms, 9:31892 (RA;AT)
Surface Properties
Influence of oxygen partial pressure on the sputtering on metastable Ca-atoms, 9:31892 (RA;AT)
Uptake
Helminthosporium maydis T toxin decreased calcium transport into mitochondria of susceptible corn, 9:31747 (J;US)
CALCIUM 40
Giant Resonance
Alpha decay of a giant E2 resonance in ^{40}Ca, 9:32103 (RA;SU;In Russian)
CALCIUM 40 REACTIONS
Heavy Ion Reactions
Flow analysis of nuclear collisions - probing the properties of dense nuclear matter, 9:32100 (RA;HU)
Spallation
Participant-spectator identification in Plastic Ball events using a cluster algorithm, 9:32101 (RA;HU)
CALCIUM 40 TARGET
Calcium 40 Reactions
Flow analysis of nuclear collisions - probing the properties of dense nuclear matter, 9:32100 (RA;HU)
Participant-spectator identification in Plastic Ball events using a cluster algorithm, 9:32101 (RA;HU)
Electron Reactions
Alpha decay of a giant E2 resonance in ^{40}Ca, 9:32103 (RA;SU;In Russian)
CALCIUM FLUORIDES
Ion Implantation
Ion implantation damage in alkaline-earth fluorides, 9:31266 (R;US)
CALCIUM IONS
Anions
Production and destruction of metastable negative ions. Progress report, September 1, 1983-August 31, 1984, 9:31874 (R;US)
Metastable States
Production and destruction of metastable negative ions. Progress report, September 1, 1983-August 31, 1984, 9:31874 (R;US)
CALCIUM SULFATES
Corrosive Effects
Corrosion in atmospheric fluidized bed combustors--the reactions of $CaSO_4$ with Cr, Ni, Co, Fe, and several alloys, 9:31214 (J;US)
CALIFORNIA
Continental Shelf
Annual petroleum review. Volume 1 (Contains glossary), 9:30248 (R;US)
Geothermal Gradients
Drilling and thermal gradient measurements at US Marine Corps Air Ground Combat Center, Twentynine Palms, California. Final report, October 1, 1983-March 31, 1984, 9:30583 (R;US)
Natural Gas
Annual petroleum review. Volume 1 (Contains glossary), 9:30248 (R;US)
Annual petroleum review. 1982 annual report to the Legislature. Volume 2, 9:30249 (R;US)
Petroleum
Annual petroleum review. Volume 1 (Contains glossary), 9:30248 (R;US)
Annual petroleum review. 1982 annual report to the Legislature. Volume 2, 9:30249 (R;US)
Temperature Gradients
Drilling and thermal gradient measurements at US Marine Corps Air Ground Combat Center, Twentynine Palms, California. Final report, October 1, 1983-March 31, 1984, 9:30583 (R;US)
Wind
Wind prospecting in San Diego County, California, 9:30601 (R;US)
CALIFORNIUM 243
Radioecological Concentration
Behavior of plutonium and americium in two groundwater systems, 9:31718 (RA;US)
CALIFORNIUM 244
Radioecological Concentration
Behavior of plutonium and americium in two groundwater systems, 9:31718 (RA;US)
CALIFORNIUM 247
Alpha Decay
Alpha-decay properties of ^{247}Cf, ^{248}Cf, ^{252}Fm and ^{254}Fm, 9:32155 (J;NL)
Spontaneous Fission
Alpha-decay properties of ^{247}Cf, ^{248}Cf, ^{252}Fm and ^{254}Fm, 9:32155 (J;NL)
CALIFORNIUM 248
Alpha Decay
Alpha-decay properties of ^{247}Cf, ^{248}Cf, ^{252}Fm and ^{254}Fm, 9:32155 (J;NL)
CALIFORNIUM 249
Crystal-Phase Transformations
X-ray diffraction study of californium metal to 16 GPa, 9:31343 (RA;IL)
Magnetic Susceptibility
Magnetism of californium metal, 9:31349 (RA;IL)

Spontaneous Fission
Short-lived spontaneously fissioning activities produced at the sup(20, 22)Ne ion interaction with ^{249}Bk and ^{249}Cf target nuclei, 9:32152 (R;XJ;In Russian)

CALIFORNIUM 249 TARGET
Neon 20 Reactions
Short-lived spontaneously fissioning activities produced at the sup(20, 22)Ne ion interaction with ^{249}Bk and ^{249}Cf target nuclei, 9:32152 (R;XJ;In Russian)
Neon 22 Reactions
Short-lived spontaneously fissioning activities produced at the sup(20, 22)Ne ion interaction with ^{249}Bk and ^{249}Cf target nuclei, 9:32152 (R;XJ;In Russian)

CALIFORNIUM 252
Spontaneous Fission
Neutron multiplicities of ^{252}Cf and the fissile nuclei. Final report, 9:32146 (R;US)

CALIFORNIUM COMPOUNDS
Diffusion
Limit diffusion coefficients and hydration (numbers) of some trivalent actinide and lanthanide ions, 9:31358 (RA;IL)
Hydration
Limit diffusion coefficients and hydration (numbers) of some trivalent actinide and lanthanide ions, 9:31358 (RA;IL)

CALORIMETERS
Simultaneous calorimetric assay system: a transportable device to measure plutonium, 9:31292 (R;US)

CALORIMETERS (PARTICLE)
See SHOWER COUNTERS

CAM
See COMPUTER-AIDED MANUFACTURING

CAMAC SYSTEM
Computer Application to Measurement And Control.
Equipment Interfaces
Interfaces and buses, 9:31538 (RA;AT)
Specifications
Recent developments in microprocessor-based data systems, 9:31620 (RA;AT)

CAMERAS

Properties of pC and pTa interactions at Psub(p)=10 GeV/c accompanied by the emission of cumulative protons and π mesons, 9:32088 (R;XJ;In Russian)
CARBON 13
Energy Levels
Polarized neutron capture into ^{13}C: Evidence for a secondary doorway state effect, 9:32092 (J;US)
Nuclear Magnetic Resonance
^{13}C solid high-resolution NMR in polyacetylene and its derivatives, 9:31247 (TG;US)
CARBON 13 TARGET
Photonuclear Reactions
M1 suppression in pion photoproduction on ^{13}C, 9:32008 (R;CA)
CARBON 14
Radioecological Concentration
Environmental radiation data report 34, April-June 1983, 9:31691 (R;US)
CARBON DIOXIDE
Adsorption Isotherms
Change in catalyst activity during catalytic steam gasification of char, 9:30135 (R;US)
Atom-Molecule Collisions
Temperature dependence of the de-excitation rate constants of excited rare gas atoms by atoms and molecules, 9:31949 (RA;AT)
De-Excitation
Vibrational relaxation of molecular ions in flow-drift tubes, 9:31921 (RA;AT)
Greenhouse Effect
Global energy futures and CO_2-induced climate change. Chapters 1-8, 9:31678 (R;US)
Global energy futures and CO_2-induced climate change: appendices, 9:31679 (R;US)
Global energy futures and CO_2-induced climate change: executive summary, 9:31680 (R;US)
Ion-Atom Collisions
Method to study reactions between ions and atomic hydrogen in a quasistatic drift tube, 9:31931 (RA;AT)
Reactions of CO_2^+ and CH_3^+ with atomic hydrogen studied in a flow drift experiment, 9:31932 (RA;AT)
Ion-Molecule Collisions
Drift tube measurements of the temperature dependence of ion association reactions in atmospheric gases. Product ion yields of reactions in methane, 9:31927 (RA;AT)
Energy dependence of the clustering reactions of Li^+ ions with some atmospheric gases, 9:31923 (RA;AT)
Method to study reactions between ions and atomic hydrogen in a quasistatic drift tube, 9:31931 (RA;AT)
Production
SERI Biomass Program. FY 1983 annual report, 9:30473 (R;US)
Vibrational States
Vibrational relaxation of molecular ions in flow-drift tubes, 9:31921 (RA;AT)
CARBON DIOXIDE LASERS
Pulses
Picosecond CO_2 laser pulses and applications, 9:31405 (R;US)
Uses
Picosecond CO_2 laser pulses and applications, 9:31405 (R;US)
CARBON FLUORIDES
Electric Discharges
Electron drift velocity and ionization and attachment coefficients in gases/mixtures for diffuse-discharge opening switches, 9:31947 (RA;AT)
Electron Attachment
Electron attachment coefficients determined using a flowing afterglow/langmuir probe (FALP) apparatus, 9:31919 (RA;GB)
Temperature and pressure dependence of the nondissociative electron attachment to perfluoropropylene (1-C_3F_6), 9:31948 (RA;AT)
CARBON MONOXIDE
Adsorption
Coadsorption and reaction of H_2 and CO on Raney nickel: Neutron vibrational spectroscopy, 9:31175 (RA;AT)
Atom-Molecule Collisions
Temperature dependence of the de-excitation rate constants of excited rare gas atoms by atoms and molecules, 9:31949 (RA;AT)
Catalysis
Coadsorption and reaction of H_2 and CO on Raney nickel: Neutron vibrational spectroscopy, 9:31175 (RA;AT)
Chemical Reaction Kinetics
Investigations on the reaction kinetics for the methanation of carbon monoxide, 9:30468 (R;DE;In German)
Chemisorption
Hydrogen chemisorption suppression in Ru-zeolite catalysts, 9:30459 (RA;US)
Particle size dependence for CO chemisorption on supported Ru catalysts, 9:30458 (RA;US)
Dissociation
Pulsed-laser atom-probe studies of surface chemical reactions, 9:31315 (R;US)
Electron Drift
Swarm experiments in gas mixtures, 9:31912 (RA;AT)
Emission
Assessment of hydrocarbon and particulate emissions control and wastewater treatment technology for the solvent refined coal-II process. Volume I. Executive summary, 9:30180 (R;US)
Assessment of hydrocarbon and particulate emissions control and wastewater treatment technology for the Solvent Refined Coal-II process. Volume II. Technical report, 9:30181 (R;US)
Ion-Molecule Collisions
Energy dependence of the clustering reactions of Li^+ ions with some atmospheric gases, 9:31923 (RA;AT)
Methanation
Investigations on the deactivation of nickel catalysts and the kinetics of the simultaneous methanation and conversion of CO-rich gases under pressure, 9:30467 (R;DE;In German)
Investigations on the reaction kinetics for the methanation of carbon monoxide, 9:30468 (R;DE;In German)
Site activities of zeolite-support Ru for CO hydrogenation. Final report, 9:30457 (R;US)
Support effects on CO hydrogenation over Ru/zeolite catalysts, 9:30463 (RA;US)
Oxidation
Pulsed-laser atom-probe studies of surface chemical reactions, 9:31315 (R;US)

CARBONYLS
Only for compounds of metals with carbonyl radicals.
Catalytic Effects
Structure and properties of zeolite-supported $Ru_3(CO)_{12}$ catalysts, 9:30461 (RA;US)
CARBOXYLIC ACIDS
Solvent Properties
Use of technical mixtures of carboxylic acids to the extraction of silver, 9:31301 (RA;SU)
CARCINOGENS
Fluorescence Spectroscopy
Versatility of laser induced fluorescence line narrowing in chemical analysis, 9:31288 (R;US)
CARIBBEAN SEA
See also GULF OF MEXICO
Water Currents
Generation of mesoscale hydrodynamic phenomena by the Grappler and Whiting Seamounts, southeast of Puerto Rico. Master thesis, 9:31859 (R;US)
CARLTON POWER REACTOR
See KEWAUNEE REACTOR
CARNOTITE
Moessbauer Effect
Synthesis and Moessbauer studies of carnotite-type compounds $M_2(NpO_2)_2V_2O_8$, (M = K, Rb, Tl), 9:31345 (RA;IL)
Synthesis
Synthesis and Moessbauer studies of carnotite-type compounds $M_2(NpO_2)_2V_2O_8$, (M = K, Rb, Tl), 9:31345 (RA;IL)
CAROTENOIDS
Synthesis
Synthesis of indanes, tetralins and carotanes, and characterization of indanes and tetralins. Final report, May 1, 1982-April 30, 1984, 9:30159 (R;US)
CASCADE MOUNTAINS
See also MT ST HELENS
Gravity Surveys
Complete Bouguer Gravity Anomaly Map, Cascade Mountains, Washington, 9:30578 (R;US)
CASCADE SOLAR CELLS
Crystal Growth
High-efficiency multi-colored photovoltaic cells. Final report, 9:30513 (R;US)
Performance
High-efficiency multi-colored photovoltaic cells. Final report, 9:30513 (R;US)
CASINGS
See COVERINGS
CATALYSTS
Chemical Preparation
Catalyst and reactor development for a slurry-phase Fischer-Tropsch process, 9:30449 (RA;US)
Comparison of iron Fischer-Tropsch catalysts using on-line gas chromatography, 9:30444 (RA;US)
Development of catalytic systems for the conversion of syngas to jet fuel and diesel fuel and higher alcohols (BNL-developed SOSS type), 9:30101 (RA;US)
Development of catalysts for the direct synthesis of liquid hydrocarbon fuels (LHF) from syngas, 9:30447 (RA;US)
Electronic properties of Ru in Y zeolites as determined by ESCA, 9:30460 (RA;US)
Fischer-Tropsch Synthesis over zeolite-supported Ru catalysts derived from $Ru_3(CO)_{12}$, 9:30462 (RA;US)
Fischer-Tropsch catalyst characterization, 9:30450 (RA;US)
Hydrogen chemisorption suppression in Ru-zeolite catalysts, 9:30459 (RA;US)
Investigation of sulfur-tolerant catalysts for selective synthesis of hydrocarbon liquids from coal-derived gases, 9:30453 (RA;US)
Particle synthesis and properties of zeolite catalysts for synthesis gas-gasoline conversion, 9:30446 (RA;US)
Site activities of zeolite-support Ru for CO hydrogenation. Final report, 9:30457 (R;US)
Structure and properties of zeolite-supported $Ru_3(CO)_{12}$ catalysts, 9:30461 (RA;US)
Syngas conversion to gasoline range hydrocarbons using metal-zeolite catalysts, 9:30445 (RA;US)
Comparative Evaluations
Characterization of Ru zeolite catalysts by a hydrogenolysis test reaction network, 9:31320 (RA;US)
Development of a catalytic process for alcohol-based synthetic transportation fuel from coal-derived synthesis gases, 9:30100 (RA;US)
Fischer-Tropsch Synthesis over zeolite-supported Ru catalysts derived from $Ru_3(CO)_{12}$, 9:30462 (RA;US)
Deactivation
Investigations on the deactivation of nickel catalysts and the kinetics of the simultaneous methanation and conversion of CO-rich gases under pressure, 9:30467 (R;DE;In German)
Model compound microreactor for determination of catalytic activity, 9:30152 (R;US)
Performance Testing
Catalyst and reactor development for a slurry-phase Fischer-Tropsch process, 9:30449 (RA;US)
Comparison of iron Fischer-Tropsch catalysts using on-line gas chromatography, 9:30444 (RA;US)
Investigation of sulfur-tolerant catalysts for selective synthesis of hydrocarbon liquids from coal-derived gases, 9:30453 (RA;US)
Model compound microreactor for determination of catalytic activity, 9:30152 (R;US)
Site activities of zeolite-support Ru for CO hydrogenation. Final report, 9:30457 (R;US)
Phase Studies
Fischer-Tropsch catalyst characterization, 9:30450 (RA;US)
Specificity
Development of a catalytic process for alcohol-based synthetic transportation fuel from coal-derived synthesis gases, 9:30100 (RA;US)
Fischer-Tropsch synthesis in slurry reactor systems. Quarterly report, November 1, 1983-January 31, 1984, 9:30456 (R;US)
CATALYTIC COMBUSTORS
Performance Testing
Study of the effectiveness of a catalytic combustion device on a wood burning appliance, 9:31458 (J;US)
CATAPHORESIS
See ELECTROPHORESIS
CATARACTS
Radioinduction
Statistical methods in various special studies at RERF, 9:31773 (RA;US)
CATECHOL
See PYROCATECHOL
CBA (BROOKHAVEN COLLIDING BEAM ACCELERATO
See ISABELLE STORAGE RINGS
CE STANDARD REACTOR
Prior to 1975, PWR/80 Type Reactors was used.
Fuel Pellets
Cost and other effects of reduced fuel pellet diameters, 9:30739 (J;US)
In Core Instruments
C-E in-core instrumentation - Functions and performance, 9:30828 (J;US)
CELL CULTURES
Biological Radiation Effects
Radiobiological aspects of encapsulated sources of iodine-125; RBE and PLDR, 9:31764 (RA;US)
CELL MEMBRANES
Neutron Diffraction
Neutron diffraction and the decomposition of membrane scattering profiles into the scattering profiles of their molecular components, 9:31733 (R;US)
CELL NUCLEI
Biological Radiation Effects
Charged-particle fluence and cellular morphometric inter-relations for linear energy transfer effects on progression through the cell cycle, 9:31761 (RA;US)
Production of DNA strand breaks by ionizing radiation of different quality and their consequences for cell inactivation, 9:31732 (R;DE;In German)
CELLS (BACTERIAL)
See BACTERIA

CELLS (ELECTROLYTIC)
See ELECTROLYTIC CELLS

CELLULASE
Code number 3.2.1.4.
Enzyme Inhibitors
Effect of cellobiose, glucose, ethanol, and metal ions on the cellulase enzyme complex of Thermomonospora fusca, 9:30485 (J;US)
Inhibition
Effect of cellobiose, glucose, ethanol, and metal ions on the cellulase enzyme complex of Thermomonospora fusca, 9:30485 (J;US)

CELLULASES
See CELLULASE

CELLULOSE
Enzymatic Hydrolysis
Effect of cellobiose, glucose, ethanol, and metal ions on the cellulase enzyme complex of Thermomonospora fusca, 9:30485 (J;US)
Liquefaction
Thermal degradation of cellulose in alkali, 9:30478 (J;US)
Thermal Degradation
Thermal degradation of cellulose in alkali, 9:30478 (J;US)

CEMENT INDUSTRY
Fuel Substitution
Chemical waste as fuel for cement kilns, 9:31100 (BA;US)
Waste Product Utilization
Use of solid waste material as a raw material in a cement process, 9:31084 (R;US)

CEPHEIDS
Mass
Theoretical study of Cepheid light curves, 9:31863 (R;US)
Star Models
Theoretical study of Cepheid light curves, 9:31863 (R;US)

CERIUM
Electron Spectroscopy
Surface reactions on Ce: Valence change monitored by core level electron energy loss spectroscopy, 9:31886 (RA;AT)
Oxidation
Surface reactions on Ce: Valence change monitored by core level electron energy loss spectroscopy, 9:31886 (RA;AT)
Surface Properties
Surface reactions on Ce: Valence change monitored by core level electron energy loss spectroscopy, 9:31886 (RA;AT)

CERIUM 129
Beta Decay
Study on the ^{129}Ce, ^{131}Ce and ^{131}Pr decay, 9:32118 (RA;SU;In Russian)

CERIUM 131
Beta Decay
Study on the ^{129}Ce, ^{131}Ce and ^{131}Pr decay, 9:32118 (RA;SU;In Russian)
Energy-Level Transitions
Study on the ^{129}Ce, ^{131}Ce and ^{131}Pr decay, 9:32118 (RA;SU;In Russian)

CERIUM COMPOUNDS
See also CERIUM SILICIDES
Diffusion
Limit diffusion coefficients and hydration (numbers) of some trivalent actinide and lanthanide ions, 9:31358 (RA;IL)
Hydration
Limit diffusion coefficients and hydration (numbers) of some trivalent actinide and lanthanide ions, 9:31358 (RA;IL)
Magnetic Susceptibility
Anisotropic spin fluctuations in cubic $CeSn_3$, 9:31209 (J;US)
Specific Heat
Anisotropic spin fluctuations in cubic $CeSn_3$, 9:31209 (J;US)

CERIUM SILICIDES
Antiferromagnetism
Magnetic ordering in CeM_2Si_2 (M = Ag,Au,Pd,Rh) compounds as studied by neutron diffraction, 9:31272 (J;US)

CERRO PRIETO GEOTHERMAL FIELD
Sandstones
Porosity of coastal deltaic sandstones, Cerro Prieto geothermal field, Baja California, Mexico, 9:30585 (R;US)

CESIUM
Adsorption
Evaluation of zeolite mixtures for decontaminating high-activity-level water at the Three Mile Island Unit 2 Nuclear Power Station, 9:30833 (R;US)
Dissolution
Basalt as a potential waste package backfill component in a repository located within the Columbia River basalt, 9:30366 (J;US)
Grueneisen Constant
Grueneisen parameter of cesium and rubidium at high pressure and the nature of the isostructural electronic transition, 9:31210 (J;US)
Leaching
Comparative leaching behavior of SYNROC B and a borosilicate glass, 9:30376 (J;US)
Continuous-flow leaching studies of crushed and cored SYNROC, 9:30372 (J;US)
Leach testing of Idaho Chemical Processing Plant final waste forms, 9:30378 (J;US)
Material Balance
Elemental partitioning in ash depositories and material balances for a coal burning facility by spark source mass spectrometry, 9:30167 (J;US)
Melting Points
Grueneisen parameter of cesium and rubidium at high pressure and the nature of the isostructural electronic transition, 9:31210 (J;US)

CESIUM 123
Energy Levels
Dynamic moments of inertia in Xe, Cs and Ba nuclei, 9:32107 (R;US)
Moment of Inertia
Dynamic moments of inertia in Xe, Cs and Ba nuclei, 9:32107 (R;US)

CESIUM 137
Body Burden
Protracted exposure to fallout: the Rongelap and Utirik experience, 9:31793 (J;GB)
Global Fallout
Inventories of $^{239\ 240}$Pu, ^{241}Am, ^{137}Cs, and ^{60}Co in Columbia River sediments from Hanford to the Columbia River estuary, 9:31721 (J;US)
Radioecological Concentration
Inventories of $^{239\ 240}$Pu, ^{241}Am, ^{137}Cs, and ^{60}Co in Columbia River sediments from Hanford to the Columbia River estuary, 9:31721 (J;US)
Report on intercomparison A-14 of the determination of some mineral components and radionuclides in milk powder, 9:31690 (R;AT)
X Radiation
Radiobiological aspects of encapsulated sources of iodine-125; RBE and PLDR, 9:31764 (RA;US)

CESIUM COMPOUNDS
Chemical Reactions
Interactions of backfill materials with cesium in a bittern brine under repository conditions, 9:30371 (J;US)
Hydrothermal Alteration
Interactions of backfill materials with cesium in a bittern brine under repository conditions, 9:30371 (J;US)

CESIUM IONS
Space Charge
Intense non-relativistic cesium ion beam, 9:32361 (R;US)

CESIUM ISOTOPES
See also CESIUM 123
CESIUM 137
Leaching
Leaching properties and chemical composition of calcines produced at the Idaho Chemical Processing Plant, 9:30375 (J;US)

CHAIN CONVEYORS
Operation
Operational experiences with the roller curve, 9:30203 (R;DE;In German)

CHALK RIVER NUCLEAR LABS
Bibliographies
CRNL library serials list. Serial holdings in the main library, 9:32434 (R;CA)
CHANNELING
Mathematical Models
Channeling continuum model derivation by method of averaging, 9:32252 (J;US)
CHANNELS (REACTOR)
See REACTOR CHANNELS
CHAPMAN-KOLMOGOROV EQUATION
Correlation Functions
Binary operators and their Green's functions, 9:30803 (J;US)
CHARGE COLLECTION
Computerized Simulation
Monte Carlo simulation of charge collection time in closed ended HP Ge gamma detectors, 9:31585 (J;US)
CHARGE EXCHANGE
Reviews
Charge-changing collisions, 9:31955 (R;US)
CHARGED PARTICLE DETECTION

CHARM PARTICLES
See also B MESONS
Particle Decay
Charm and its production in neutrino reactions, 9:32017 (R;DE;In German)
Particle Production
Charm and its production in neutrino reactions, 9:32017 (R;DE;In German)
Search for charmed particles in neutrino induced reactions. A study of light-ion collisions at very high energy, 9:31994 (R;SE)
Reviews
Charm and its production in neutrino reactions, 9:32017 (R;DE;In German)
CHARPAK CHAMBERS
See MULTIWIRE PROPORTIONAL CHAMBERS
CHARS
Chemical Composition
Coal conversion systems technical data book, 9:30155 (R;US)
Chemical Properties
Coal conversion systems technical data book, 9:30155 (R;US)
Chemical Reaction Yield
Plasticity, agglomeration and volatiles secondary reactions in coal pyrolysis (Task A). Annual report, September 10, 1982-February 29, 1984, 9:30119 (R;US)
Gasification
Change in catalyst activity during catalytic steam gasification of char, 9:30135 (R;US)
Gasification reactivities of coal and coal char. Project progress report, July 16, 1982-May 31, 1984, 9:30136 (R;US)
Mechanical Properties
Pyrolysis and gasification kinetics of densified biomass. Final report, 9:30454 (R;US)
Physical Properties
Coal conversion systems technical data book, 9:30155 (R;US)
Porosity
Plasticity, agglomeration and volatiles secondary reactions in coal pyrolysis (Task A). Annual report, September 10, 1982-February 29, 1984, 9:30119 (R;US)
Surface Area
Plasticity, agglomeration and volatiles secondary reactions in coal pyrolysis (Task A). Annual report, September 10, 1982-February 29, 1984, 9:30119 (R;US)
CHEMICAL ANALYSIS
See also ACTIVATION ANALYSIS
NUCLEAR REACTION ANALYSIS
Interlaboratory Comparisons
SRC-I solid product characterization. Final technical report, 9:30122 (R;US)
CHEMICAL BONDS
Cleavage
Quantitation of the reductive cleavage of aryl ethers of SRC and coals. Final report, September 1980-March 1984 , 9:31319 (R;US)
CHEMICAL DOSEMETERS
Radiological Protection Dosimetry Section report of work done and list of publications during 1981-1982, 9:31751 (R;IN)
CHEMICAL EXPLOSIVES
See also NITROMETHANE
PETN
TATB
Impurities
Carbon-13 analysis and characterization of the isolated products present in the preparation of HNS, 9:31636 (R;US)
Stability
Nuclear magnetic resonance kinetic study of the intramolecular rearrangement of 2-(5-cyanotetraazolato)pentaammine cobalt (III) perchlorate, 9:31637 (R;US)
CHEMICAL INDUSTRY
Air Pollution Abatement
Environmental and energy benefits of microprocessor control of oven airflows from metal painting operations, 9:31085 (R;US)
CHEMICAL REACTIONS
See also CORROSION
DESULFURIZATION
DIELS-ALDER REACTION
FISCHER-TROPSCH SYNTHESIS
METHANATION
OXIDATION
Quantum Mechanics
Chemical reaction as a quantum transition, 9:32280 (R;US)
CHEMICAL REACTORS
Deposits
H-Coal Pilot Plant. Volume III. 4.0 - equipment performance: 4.1 - test program, 4.2 - slurry pumps, 4.3 - H-Coal reactor, 4.4 - heaters. Final report, 9:30106 (R;US)
Design
Bench-scale development of the TRW process for cleaning coal (Gravimelt Process). Quarterly technical progress report, February 1984-May 1984, 9:30142 (R;US)
Catalyst and reactor development for a slurry-phase Fischer-Tropsch process, 9:30449 (RA;US)
Fischer-Tropsch synthesis from a low H_2:CO gas in a dry fluidized-bed system. Technical progress report, July 1, 1983-April 30, 1984, 9:30464 (R;US)
Gasification reactivities of coal and coal char. Project progress report, July 16, 1982-May 31, 1984, 9:30136 (R;US)
Model compound microreactor for determination of catalytic activity, 9:30152 (R;US)

Fabrication
Bench-scale development of the TRW process for cleaning coal (Gravimelt Process). Quarterly technical progress report, February 1984-May 1984, 9:30142 (R;US)
Fluid Mechanics
H-Coal Pilot Plant. Volume III. 4.0 - equipment performance: 4.1 - test program, 4.2 - slurry pumps, 4.3 - H-Coal reactor, 4.4 - heaters. Final report, 9:30106 (R;US)
Installation
Bench-scale development of the TRW process for cleaning coal (Gravimelt Process). Quarterly technical progress report, February 1984-May 1984, 9:30142 (R;US)
Level Indicators
H-Coal Pilot Plant. Volume III. 4.0 - equipment performance: 4.1 - test program, 4.2 - slurry pumps, 4.3 - H-Coal reactor, 4.4 - heaters. Final report, 9:30106 (R;US)
Mathematical Models
Mathematically modeled comparison of Fischer-Tropsch reactor systems (F-T reactors: tube-wall; entrained bed and slurry), 9:30448 (RA;US)
Mixing
Usefulness of a slurry-type Fischer-Tropsch reactor for processing synthesis gas of low hydrogen-carbon monoxide ratios, 9:30451 (RA;US)
Operation
Fischer-Tropsch synthesis from a low H_2:CO gas in a dry fluidized-bed system. Technical progress report, July 1, 1983-April 30, 1984, 9:30464 (R;US)
Temperature Control
H-Coal Pilot Plant. Volume III. 4.0 - equipment performance: 4.1 - test program, 4.2 - slurry pumps, 4.3 - H-Coal reactor, 4.4 - heaters. Final report, 9:30106 (R;US)

CHROMIUM
Indoor Air Pollution
Health hazard evaluation determination report No. MHETA-81-108-9006, Consolidation Coal Company, central machine shop 20, Cadiz, Ohio, 9:30223 (R;US)

CHROMIUM 50
Energy Levels
Study on the high-energy states of ^{50}Cr by means of the Fe(n, γ) reaction, 9:32102 (RA;SU;In Russian)

CHROMIUM ALLOYS
See also NICKEL-CHROMIUM STEELS
STAINLESS STEELS
Capture
Measurements of structural material capture to uranium-235 fission rate ratios in an intermediate spectrum assembly, 9:30785 (J;US)
Corrosion Inhibitors
Determination of the minimum surface enrichment of molybdenum required to inhibit active dissolution of an Fe-Cr-Ni-Mo alloy, 9:31212 (J;US)
Magnetic Properties
Magnetic properties of N/sub p/M_4Al_8 intermetallic compounds (M = Cr, Cu) studied by Moessbauer effect magnetic susceptibility and neutron diffraction, 9:31182 (RA;IL)
Neutron Reactions
Measurements of structural material capture to uranium-235 fission rate ratios in an intermediate spectrum assembly, 9:30785 (J;US)
Physical Radiation Effects
Evolution of cavity microstructure in ion-irradiated 316 SS and Fe-20Ni-15Cr alloy (Fe-20Ni-15Cr), 9:31144 (R;US)

CHROMIUM-MOLYBDENUM STEELS
See also ALLOY-HT-9
Corrosion
Corrosion in atmospheric fluidized bed combustors--the reactions of $CaSO_4$ with Cr, Ni, Co, Fe, and several alloys, 9:31214 (J;US)
Creep
Evaluation of ferritic alloy Fe-2-1/4Cr-1Mo after neutron irradiation - irradiation creep and swelling, 9:31149 (R;US)
Electroslag Casting
Steel castings by the electroslag casting technique, 9:31145 (R;US)

Heat Treatments
Heat treatment of 2 1/4 Cr--1 Mo steel for breeder reactor steam generators, 9:30777 (J;US)
Mechanical Properties
Heat treatment of 2 1/4 Cr--1 Mo steel for breeder reactor steam generators, 9:30777 (J;US)
Microstructure
Heat treatment of 2 1/4 Cr--1 Mo steel for breeder reactor steam generators, 9:30777 (J;US)
Oxidation
Corrosion in atmospheric fluidized bed combustors--the reactions of $CaSO_4$ with Cr, Ni, Co, Fe, and several alloys, 9:31214 (J;US)
Physical Radiation Effects
Evaluation of ferritic alloy Fe-2-1/4Cr-1Mo after neutron irradiation - irradiation creep and swelling, 9:31149 (R;US)
Sulfidation
Corrosion in atmospheric fluidized bed combustors--the reactions of $CaSO_4$ with Cr, Ni, Co, Fe, and several alloys, 9:31214 (J;US)
Swelling
Evaluation of ferritic alloy Fe-2-1/4Cr-1Mo after neutron irradiation - irradiation creep and swelling, 9:31149 (R;US)

CHROMODYNAMICS
See QUANTUM CHROMODYNAMICS

CHROMOSOMAL ABERRATIONS
Dose-Response Relationships
Radiation-induced chromosome aberrations in A-bomb survivors: a key to biological dosimetry, 9:31772 (RA;US)
Regression methods for count data with extra-binomial variation, 9:31774 (RA;US)

Comparative Evaluations
Chemical aspects governing the choice of backfill materials for nuclear waste repositories, 9:30367 (J;US)
Materials Testing
Chemical aspects governing the choice of backfill materials for nuclear waste repositories, 9:30367 (J;US)
Sorptive Properties
Chemical aspects governing the choice of backfill materials for nuclear waste repositories, 9:30367 (J;US)

CLEAN WATER ACT
Prior to April 1980, FEDERAL WATER POLLUTION CONTROL ACT was used to index this concept.
Implementation
Habitat structure and fish communities of warmwater streams, 9:31703 (R;US)
Wastewater dischargers are not complying with EPA pollution control permits, 9:31723 (R;US)

CLIMATES
Mathematical Models
Distortions in frequency spectra of signals associated with sampling-pulse shapes, 9:32412 (R;IT)
Global energy futures and CO_2-induced climate change. Chapters 1-8, 9:31678 (R;US)
Global energy futures and CO_2-induced climate change: appendices, 9:31679 (R;US)
Global energy futures and CO_2-induced climate change: executive summary, 9:31680 (R;US)
Variations
Distortions in frequency spectra of signals associated with sampling-pulse shapes, 9:32412 (R;IT)

CLINCH RIVER BREEDER REACTOR
Electrical Equipment
Electrical power distribution system for Clinch River Breeder Reactor Plant, 9:30769 (J;US)
Reactor Accidents
Advanced reactor safety research quarterly report, October-December 1982. Volume 24, 9:30930 (R;US)
Reactor Core Disruption
Core phenomenology. TEC report on CRBRP PRA Phase II, Task 6C. Final draft report, Revision 1, 9:30862 (R;US)

CLINOPTILOLITE
Chemical Reactions
Interactions of backfill materials with cesium in a bittern brine under repository conditions, 9:30371 (J;US)
Hydrothermal Alteration
Interactions of backfill materials with cesium in a bittern brine under repository conditions, 9:30371 (J;US)

COAL
See also BLACK COAL
BROWN COAL
Synopsis of the Annual Energy Review and Outlook, 1983, 9:30993 (R;US)
Agglomeration
Plasticity, agglomeration and volatiles secondary reactions in coal pyrolysis (Task A). Annual report, September 10, 1982-February 29, 1984, 9:30119 (R;US)
Ashes
Ash and slag characterization for low-rank coals, 9:30158 (R;US)
Chemical Analysis
Coal analysis in New Zealand, 9:30165 (R;US)
Methods for sulfur in coal. Revision 1, 9:30164 (R;US)
Chemical Bonds
Quantitation of the reductive cleavage of aryl ethers of SRC and coals. Final report, September 1980-March 1984 , 9:31319 (R;US)
Chemical Composition
Coal conversion systems technical data book, 9:30155 (R;US)
Elemental partitioning in ash depositories and material balances for a coal burning facility by spark source mass spectrometry, 9:30167 (J;US)
Chemical Properties
Coal conversion systems technical data book, 9:30155 (R;US)
Effects of stresses on optical and chemical properties of coal. Technical progress report, August 1, 1983-October 31, 1983, 9:30163 (R;US)
Classification
Coal conversion systems technical data book, 9:30155 (R;US)
Cleaning
Modelling and assessment of advanced processes for integrated environmental control of coal-fired power plants. Technical progress report, 9:30652 (R;US)
Preparation of super-clean coal. Technical progress report for first and second quarters, September 15, 1983-March 14, 1984, 9:30214 (R;US)
Combustion
Combustion of calcium-exchanged coal. 2nd quarterly report, 9:31455 (R;US)

Effect of US coal exports on domestic economic growth and on US national security (1983 to 2000), 9:30153 (R;US)
Combustion Properties
Coal conversion systems technical data book, 9:30155 (R;US)
Devolatilization
Gasification reactivities of coal and coal char. Project progress report, July 16, 1982-May 31, 1984, 9:30136 (R;US)
Dielectric Properties
Physical properties and moisture, 9:30156 (R;US)
Energy Policy
Effect of US coal exports on domestic economic growth and on US national security (1983 to 2000), 9:30153 (R;US)
Exports
Effect of US coal exports on domestic economic growth and on US national security (1983 to 2000), 9:30153 (R;US)
Flotation
Preparation of super-clean coal. Technical progress report for first and second quarters, September 15, 1983-March 14, 1984, 9:30214 (R;US)
Fluidized-Bed Combustion
Corrosion in atmospheric fluidized bed combustors--the reactions of $CaSO_4$ with Cr, Ni, Co, Fe, and several alloys, 9:31214 (J;US)
Modeling of pressurized fluidized bed combustion of coal. Volume I. PFBC system model development. Final report, 9:30216 (R;US)
Test Series 2.2: Detailed Test Plan, 9:31454 (R;US)
Fracture Properties
Physical properties and moisture, 9:30156 (R;US)
Grinding
Preparation of super-clean coal. Technical progress report for first and second quarters, September 15, 1983-March 14, 1984, 9:30214 (R;US)
Mass Spectroscopy
Elemental partitioning in ash depositories and material balances for a coal burning facility by spark source mass spectrometry, 9:30167 (J;US)
Natural Radioactivity
Relative radiation hazards of coal based and nuclear power plants. Final report for the period 1 December 1980 - 14 February 1983, 9:30182 (R;AT)
Optical Properties
Effects of stresses on optical and chemical properties of coal. Technical progress report, August 1, 1983-October 31, 1983, 9:30163 (R;US)
Physical Properties
Coal conversion systems technical data book, 9:30155 (R;US)
Plasticity
Plasticity, agglomeration and volatiles secondary reactions in coal pyrolysis (Task A). Annual report, September 10, 1982-February 29, 1984, 9:30119 (R;US)
Prices
State energy price and expenditure report, 1970-1981, 9:30242 (R;US)
Pyrolysis
Effects of stresses on optical and chemical properties of coal. Technical progress report, August 1, 1983-October 31, 1983, 9:30163 (R;US)
Gasification reactivities of coal and coal char. Project progress report, July 16, 1982-May 31, 1984, 9:30136 (R;US)
Plasticity, agglomeration and volatiles secondary reactions in coal pyrolysis (Task A). Annual report, September 10, 1982-February 29, 1984, 9:30119 (R;US)
Volatiles mass transport with particles of softened coal. Technical progress report, July 27-October 26, 1983, 9:30139 (R;US)
Quality Control
Influence of coal quality on boiler availability due to fireside tube wastage, 9:30629 (RA;US)
Research Programs
Advanced research and technoloty: University Coal Research Program (Listed by state, organization and contract No. plus brief description), 9:30096 (R;US)
Summary of university contracts and grants supported by the Office of Fossil Energy, FY 1983, 9:30120 (R;US)
Summary of AR and TD/APT contracts and grants supported by the Office of Fossil Energy FY 83, 9:30121 (R;US)
Slags
Ash and slag characterization for low-rank coals, 9:30158 (R;US)
Structural Chemical Analysis
Novel analytical approaches to coal beneficiation. Quarterly report, 9:30162 (R;US)
Sulfur Content
Methods for sulfur in coal. Revision 1, 9:30164 (R;US)
Supply and Demand
Organisation and structure of the Pacific steam coal trade, 9:30218 (R;GB)
Technology Utilization
Research topics in coal utilization, 9:31027 (R;US)
Trade
Organisation and structure of the Pacific steam coal trade, 9:30218 (R;GB)
Viscosity
Plasticity, agglomeration and volatiles secondary reactions in coal pyrolysis (Task A). Annual report, September 10, 1982-February 29, 1984, 9:30119 (R;US)

COAL CHEMICALS
See COAL EXTRACTS

COAL DEPOSITS
Chemical Composition
Coal conversion systems technical data book, 9:30155 (R;US)
Classification
Evaluation of coking coals in Colorado. Resource Series 7, 9:30186 (R;US)
Evaluation
Evaluation of coking coals in Colorado. Resource Series 7, 9:30186 (R;US)
Exploration
Further development of a noise logging system, 9:30185 (R;DE;In German)
Geology
Future utilization of Texas lignites: a review. Mineral Resource Cicular No. 63, 9:30188 (R;US)
Preliminary hydrologic evaluation of the North Horn Mountain coal-resources area, Utah, 9:30189 (R;US)
Ground Water
Preliminary hydrologic evaluation of the North Horn Mountain coal-resources area, Utah, 9:30189 (R;US)
Hydrology
Preliminary hydrologic evaluation of the North Horn Mountain coal-resources area, Utah, 9:30189 (R;US)
Resource Potential
National Petroleum Council study on unconventional gas, 9:30256 (BA;US)
Seismic Surveys
Procedure in the application of surface seismology, 9:30187 (R;DE;In German)

COAL EXTRACTS
Gel Permeation Chromatography
Supercritical solvent extraction, 9:30115 (R;US)
NMR Spectra
Novel analytical approaches to coal beneficiation. Quarterly report, 9:30162 (R;US)
Structural Chemical Analysis
Novel analytical approaches to coal beneficiation. Quarterly report, 9:30162 (R;US)

COAL FINES
Combustion Kinetics
Kinetics of NO/sub x/ formation during early stages of pulverized coal combustion. Final report September 1980-September 1982, 9:30217 (R;US)

COAL GAS
Gas Analysis
Process gas chromatography study of a Selexol acid gas removal system. Final report Mar-Sep 82, 9:30151 (R;US)
Gas Chromatography
Process gas chromatography study of a Selexol acid gas removal system. Final report Mar-Sep 82, 9:30151 (R;US)
Hydrogenation
Consequent reactions of carbonized coal products under hydrogen pressure, 9:30145 (R;DE;In German)

Pyrolysis
Consequent reactions of carbonized coal products under hydrogen pressure, 9:30145 (R;DE;In German)

COAL GASIFICATION
See also FISCHER-TROPSCH/MOBIL PROCESS
LURGI PROCESS
TEXACO GASIFICATION PROCESS
Future utilization of Texas lignites: a review. Mineral Resource Cicular No. 63, 9:30188 (R;US)

Catalysts
Catalytic influence of inorganic coal compounds on the gasification of coals with hydrogen and water vapor, 9:30146 (R;DE;In German)
Change in catalyst activity during catalytic steam gasification of char, 9:30135 (R;US)
Utility of the properties of salt and water systems at high pressures for catalytic coal gasification, 9:30149 (R;DE;In German)

Chemical Reaction Kinetics
Plasticity, agglomeration and volatiles secondary reactions in coal pyrolysis (Task A). Annual report, September 10, 1982-February 29, 1984, 9:30119 (R;US)

Chemical Reactors
Gasification reactivities of coal and coal char. Project progress report, July 16, 1982-May 31, 1984, 9:30136 (R;US)

Combined Cycles
Low-purity oxygen production study. Final report, 9:30143 (R;US)

Forecasting
Coal gasification in a pig iron bath; its future technological and economical possibilities, 9:30148 (R;DE;In German)

Pilot Plants
Prototype plant for nuclear process heat (PNP), reference phase. R+D-work on hydrogasification of coal (HKV), 9:30098 (R;DE;In German)

Process Heat
Prototype plant for nuclear process heat (PNP), reference phase. R+D-work on hydrogasification of coal (HKV), 9:30098 (R;DE;In German)

Sampling
Process gas chromatography study of a Selexol acid gas removal system. Final report Mar-Sep 82, 9:30151 (R;US)

Smelters
Coal gasification in a pig iron bath; its future technological and economical possibilities, 9:30148 (R;DE;In German)

COAL GASIFICATION PLANTS

Chemical Reactors
Great Plains ASPEN model development. Technical progress report, April 1-April 30, 1984, 9:30118 (R;US)

Computerized Simulation
Great Plains ASPEN model development. Technical progress report, April 1-April 30, 1984, 9:30118 (R;US)

Data Acquisition Systems
Great Plains ASPEN model development. Technical progress report, April 1-April 30, 1984, 9:30118 (R;US)

Performance Testing
Prototype plant for nuclear process heat (PNP), reference phase. R+D-work on hydrogasification of coal (HKV), 9:30098 (R;DE;In German)

Waste Water
Fixed-film, fluidized-bed bioreactors for biooxidation of coal gasification wastewaters, 9:30169 (R;US)
Use of treated gasification wastewater in a pilot cooling tower. Phase I. Final report for the period ending January 31, 1984, 9:30116 (R;US)

COAL INDUSTRY

Economic Impact
Regional, new source bubble policy: its advantages illustrated for the State of Illinois, 9:31668 (J;US)

Indoor Air Pollution
Health hazard evaluation determination report No. MHETA-81-108-9006, Consolidation Coal Company, central machine shop 20, Cadiz, Ohio, 9:30223 (R;US)
Health hazard evaluation determination report No. MHETA-80-119-9007, Peabody Coal Company, Ken Surface Mine Processing Plant, Beaver Dam, Kentucky, 9:31658 (R;US)

Market
Effect of US coal exports on domestic economic growth and on US national security (1983 to 2000), 9:30153 (R;US)

COAL LIQUEFACTION
See also EXXON LIQUEFACTION PROCESS
FISCHER-TROPSCH/MOBIL PROCESS
H-COAL PROCESS
SRC-II PROCESS
SUPERCRITICAL GAS EXTRACTION
TSL PROCESS

Catalysts
Solvent tailoring in coal liquefaction. Quarterly report, January 1984-March 1984, 9:30134 (R;US)

Chemical Reaction Kinetics
Studies in coal liquefaction with application to the SRC and related processes. Report for the period August-September 1983, 9:30114 (R;US)

Economic Analysis
Cost of liquid fuels from coal. Part IV. Products from direct liquefaction processes, 9:30144 (R;GB)

Mass Transfer
Studies in coal liquefaction with application to the SRC and related processes. Report for the period August-September 1983, 9:30114 (R;US)

Organic Solvents
Coal conversion with nondonor solvents: comparison with process solvents, 9:30102 (R;US)
Solvent tailoring in coal liquefaction. Quarterly report, January 1984-March 1984, 9:30134 (R;US)

Pilot Plants
Corrosion resistant materials for coal liquefaction systems, 9:30099 (R;US)

Yields
Coal conversion with nondonor solvents: comparison with process solvents, 9:30102 (R;US)

COAL LIQUEFACTION PLANTS

Capitalized Cost
Cost of liquid fuels from coal. Part IV. Products from direct liquefaction processes, 9:30144 (R;GB)

Corrosion
Corrosion resistant materials for coal liquefaction systems, 9:30099 (R;US)

Erosion
Corrosion resistant materials for coal liquefaction systems, 9:30099 (R;US)

Ground Subsidence
Socio-economics, subsidence, transportation and legal ramifications of potential coal liquefaction plant sitings. Second quarterly report, January 1-March 31, 1984 (Contains input-output matrix for West Virginia), 9:30138 (R;US)

Legal Aspects
Socio-economics, subsidence, transportation and legal ramifications of potential coal liquefaction plant sitings. Second quarterly report, January 1-March 31, 1984 (Contains input-output matrix for West Virginia), 9:30138 (R;US)

Materials
Corrosion resistant materials for coal liquefaction systems, 9:30099 (R;US)

Site Selection
Socio-economics, subsidence, transportation and legal ramifications of potential coal liquefaction plant sitings. Second quarterly report, January 1-March 31, 1984 (Contains input-output matrix for West Virginia), 9:30138 (R;US)

Socio-Economic Factors
Socio-economics, subsidence, transportation and legal ramifications of potential coal liquefaction plant sitings. Second quarterly report, January 1-March 31, 1984 (Contains input-output matrix for West Virginia), 9:30138 (R;US)

COAL LIQUIDS

Chemical Properties
H-Coal pilot plant. Final report. Volumes IX and X, 9:30112 (R;US)

Coking
Solvent tailoring in coal liquefaction. Quarterly report, January 1984-March 1984, 9:30134 (R;US)
Combustion Properties
Coal conversion systems technical data book, 9:30155 (R;US)
Cost
Cost of liquid fuels from coal. Part IV. Products from direct liquefaction processes, 9:30144 (R;GB)
Economics
Cost of liquid fuels from coal. Part IV. Products from direct liquefaction processes, 9:30144 (R;GB)
Fractionation
H-Coal pilot plant. Final report. Volumes IX and X, 9:30112 (R;US)
Interim report on the genetic and animal toxicity testing of SRC-I products, intermediates, and waste materials. Appendix B. Volume 1. In vivo cytogenetics and in vitro mammalian mutagenicity (mouse lymphoma test) basic program, 9:30126 (R;US)
Interim report on the genetic and animal toxicity testing of SRC-I products, intermediates, and waste materials. Appendix F. QC/QA monitoring reports, 9:30130 (R;US)
Hydrocracking
Refining and upgrading of synfuels from coal and oil shales by advanced catalytic processes, 9:30113 (R;US)
Mutagen Screening
Interim report on the genetic and animal toxicity testing of SRC-I products, intermediates, and waste materials. Appendix F. QC/QA monitoring reports, 9:30130 (R;US)
Physical Properties
H-Coal pilot plant. Final report. Volumes IX and X, 9:30112 (R;US)
Refining
Cost of liquid fuels from coal. Part IV. Products from direct liquefaction processes, 9:30144 (R;GB)
Thermodynamic Properties
Thermodynamic behavior of coal liquids in the presence of coal solids characterization of IOM and ASH. Third quarterly progress report, February 1, 1984-May 1, 1984, 9:30140 (R;US)
Vapor Pressure
Thermodynamic behavior of coal liquids in the presence of coal solids characterization of IOM and ASH. Third quarterly progress report, February 1, 1984-May 1, 1984, 9:30140 (R;US)

COAL MINERS
Epidemiology
Health hazards from underground use of diesel engines, 9:30220 (RA;US)
Health hazards from diesel exhausts, 9:30221 (RA;US)
Health Hazards
Diesel equipment in underground coal mines, 9:30219 (R;US)
Health hazards from underground use of diesel engines, 9:30220 (RA;US)
Health hazards from diesel exhausts, 9:30221 (RA;US)
Occupational Diseases
Diesel equipment in underground coal mines, 9:30219 (R;US)
Health hazards from underground use of diesel engines, 9:30220 (RA;US)

COAL MINING
Inclined Strata
Roller operation with shield-type support and pneumatic stowing up to 60 gon dip, 9:30205 (R;DE;In German)

COAL PLANERS
See COAL PLOWS

COAL PLOUGHS
See COAL PLOWS

COAL PLOWS
Velocity
Assignment of the plough and conveyor velocity, 9:30207 (R;DE;In German)

COAL PREPARATION PLANTS
Computerized Simulation
Modelling and assessment of advanced processes for integrated environmental control of coal-fired power plants. Technical progress report, 9:30652 (R;US)

COAL PRODUCING DISTRICTS
Hydrology
Hydrology of Area 6, Eastern Coal Province, Maryland, West Virginia, and Pennsylvania, 9:30190 (R;US)

COAL RESERVES
Classification
Future utilization of Texas lignites: a review. Mineral Resource Cicular No. 63, 9:30188 (R;US)

COAL TAR
Chemical Reaction Yield
Plasticity, agglomeration and volatiles secondary reactions in coal pyrolysis (Task A). Annual report, September 10, 1982-February 29, 1984, 9:30119 (R;US)
Chemical Reactions
Plasticity, agglomeration and volatiles secondary reactions in coal pyrolysis (Task A). Annual report, September 10, 1982-February 29, 1984, 9:30119 (R;US)

COAL-DERIVED LIQUIDS
See COAL LIQUIDS

COAL-FIRED GAS TURBINES
Previous to February 1980 this concept was indexed to GAS TURBINES.
Corrosion
Deposition and corrosion in gas turbines utilizing coal or coal-derived fuel, 9:31383 (R;US)
Deposition
Deposition and corrosion in gas turbines utilizing coal or coal-derived fuel, 9:31383 (R;US)

COAL-FIRED MHD GENERATORS
Combustors
Coal-fired MHD combustor development project, Phase IIIC. Third quarterly technical progress report, 1 January-30 April, 1984, 9:31045 (R;US)
Design
MHD generator component development. Quarterly report, October 1983-December 1983, 9:31044 (R;US)
Performance Testing
MHD generator component development. Quarterly report, October 1983-December 1983, 9:31044 (R;US)

COAL-OIL MIXTURES

ELECTRODEPOSITED COATINGS
PAINTS
Meetings
Hard coatings for tribological systems operating under extreme conditions, 9:31083 (R;US)

COBALT 60
Body Burden
Protracted exposure to fallout: the Rongelap and Utirik experience, 9:31793 (J;GB)
Radioecological Concentration
Inventories of $^{239,240}Pu$, ^{241}Am, ^{137}Cs, and ^{60}Co in Columbia River sediments from Hanford to the Columbia River estuary, 9:31721 (J;US)
Radionuclide Migration
Inventories of $^{239,240}Pu$, ^{241}Am, ^{137}Cs, and ^{60}Co in Columbia River sediments from Hanford to the Columbia River estuary, 9:31721 (J;US)

COBALT ALLOYS
See also COBALT BASE ALLOYS

Laves Phases
Composition-dependent magnetic properties of NpCosub(2+-x) laves-phase compounds. Moessbauer and X-ray diffraction studies, 9:31181 (RA;IL)
Magnetic Properties
Composition-dependent magnetic properties of NpCosub(2+-x) laves-phase compounds. Moessbauer and X-ray diffraction studies, 9:31181 (RA;IL)

COBALT BASE ALLOYS
Electric Conductivity
Electrical resistivity of the Cobalt-rich Co-Fe alloys, 9:31166 (RA;BR)

COBALT COMPLEXES
Stability
Nuclear magnetic resonance kinetic study of the intramolecular rearrangement of 2-(5-cyanotetraazolato)pentaammine cobalt (III) perchlorate, 9:31637 (R;US)

COBALT COMPOUNDS
See also COBALT OXIDES
Laves Phases
5f-electrons in uranium laves-phase compounds. Photoemission from UMn_2, UFe_2, UCo_2, UFeNi, UOs_2 and UIr_2, 9:31180 (RA;IL)
Photoemission
5f-electrons in uranium laves-phase compounds. Photoemission from UMn_2, UFe_2, UCo_2, UFeNi, UOs_2 and UIr_2, 9:31180 (RA;IL)

COBALT OXIDES
Diffusion
Point defects and diffusion mechanisms in the monoxides of the iron-group metals, 9:31221 (R;US)
Optical Properties
optical properties, thermal stability and characterization of cobalt Oxide films, 9:30571 (J;US)

COGEMA LA HAGUE
Nuclear Materials Management
Plutonium determination by spectrophotometry of plutonium. VI. Control of the nuclear fuel reprocessing plant, 9:30409 (TJ;US)

COGENERATION
Prior to November 1980, this concept was indexed to CO-GENERATION.
See COGENERATION
Feasibility Studies
Cogeneration technology: a brief assessment, 9:31106 (R;US)
Market
Market development for advanced coal-based cogeneration systems by the year 2000. Final report, 9:31016 (R;US)
Ownership
Market development for advanced coal-based cogeneration systems by the year 2000. Final report, 9:31016 (R;US)
Technology Assessment
Cogeneration technology: a brief assessment, 9:31106 (R;US)
Technology Utilization
Market development for advanced coal-based cogeneration systems by the year 2000. Final report, 9:31016 (R;US)

See MAGNET COILS

COKE
Oxidation
Solvent tailoring in coal liquefaction. Quarterly report, January 1984-March 1984, 9:30134 (R;US)
Specifications
SRC-I solid product characterization. Final technical report, 9:30122 (R;US)

COKE-OVEN GAS
See COAL GAS

COLD STORAGE
Control Systems
System controls for solar-heating and heat- and cool-storage systems. Final report, 9:30556 (R;US)

COLLECTIVE ACCELERATORS
See also ELECTRON-RING ACCELERATORS
Meetings
Collective accelerator methods, 9:31477 (R;SU;In Russian)

COLLECTIVE MODEL
Damping
Damping of nuclear collective motion, 9:32166 (RA;DE)
Equations of Motion
Macroscopic equation of motion including quantum mechanical and non-Markoff processes, 9:32178 (RA;DE;In German)
Mass Defect
Collective mass and zero-point energy in the generator-coordinate method, 9:32184 (R;DE;In German)
Quantum Mechanics
Nuclear collective coordinates as quantum variables and a self-consistent description of damped vibrations, 9:32165 (RA;DE)
Vibrational States
Collective mode including the spin degree of freedom, 9:32172 (RA;DE)
Quadrupole vibrations of ^{238}U in collective transport theory, 9:32149 (RA;DE)

COLLECTRONS
See SELF-POWERED NEUTRON DETECTORS

COLLIMATORS
Design
High-speed motion neutron radiography, 9:31610 (J;US)
Optimization
Optimized alpha source collimator, 9:31530 (RA;US)
Performance
High-speed motion neutron radiography, 9:31610 (J;US)
Time Resolution
High-speed motion neutron radiography, 9:31610 (J;US)

COLLISIONS
For low-energy interactions involving photons, electrons, ions, atoms, and molecules; not for NUCLEAR REACTIONS; for elementary particles and radiations see also INTERACTIONS.
See also ATOM COLLISIONS
ELECTRON COLLISIONS
ION COLLISIONS
Mass Spectroscopy
Physical principles and design of the ATOS device, 9:31950 (RA;SU;In Russian)

COLOGNE SPIRITS
See ETHANOL

COLOMBIA
Energy Policy
Effect of US coal exports on domestic economic growth and on US national security (1983 to 2000), 9:30153 (R;US)

COLOR MODEL
Confinement forces in backward proton production off nuclei, 9:32018 (RA;HU)
Unified Gauge Models
Flavor-color-hypercolor unification based on SO(10) /SUB V/ x SO(10) /SUB H/ , 9:32039 (BA;US)

COLORADO
Coal Deposits
Evaluation of coking coals in Colorado. Resource Series 7, 9:30186 (R;US)
Coal Mines
Evaluation of coking coals in Colorado. Resource Series 7, 9:30186 (R;US)
Coal Reserves
Evaluation of coking coals in Colorado. Resource Series 7, 9:30186 (R;US)
Geochemical Surveys
Helium and ground temperature surveys at Steamboat Springs, Colorado. Special Publication 21, 9:30580 (R;US)
Hot Springs
Helium and ground temperature surveys at Steamboat Springs, Colorado. Special Publication 21, 9:30580 (R;US)
Natural Gas Deposits
Analysis of stratigraphic barriers (caprock) between sands in the cretaceous Mesa Verde formation, US DOE Multiwell Experiment, Garfield County, Colorado, 9:30253 (R;US)
Oil Shale Deposits
Summary of the oil shale fragmentation program at Anvil Points Mine, Colorado, 9:30266 (R;US)

Sandstones
Analysis of stratigraphic barriers (caprock) between sands in the cretaceous Mesa Verde formation, US DOE Multiwell Experiment, Garfield County, Colorado, 9:30253 (R;US)
Temperature Surveys
Helium and ground temperature surveys at Steamboat Springs, Colorado. Special Publication 21, 9:30580 (R;US)
COLORIMETRY
See ABSORPTION SPECTROSCOPY
COLUMBIUM
See NIOBIUM
COMBINED GAS AND STEAM CYCLE POWER PLANTS
See COMBINED-CYCLE POWER PLANTS
COMBINED STEAM-POWER GENERATION
See COGENERATION
COMBINED-CYCLE POWER PLANTS
Prior to March, 1976, the descriptors COMBINED CYCLES and FOSSIL-FUEL POWER PLANTS or THERMAL POWER PLANTS were used for indexing this concept.
Audits
Reliability, availability, and maintainability audit of the T.H. Wharton Plant, Units 3 and 4, Houston Lighting and Power. Final report, 9:30611 (R;US)
COMBUSTION
See also FLUIDIZED-BED COMBUSTION
IN-SITU COMBUSTION
Diagnostic Techniques
New light on combustion research, 9:31364 (RA;US)
Environmental Impacts
Environmental consequences arising from the combustion of municipal solid waste, 9:31121 (BA;US)
Mass Spectroscopy
Molecular beam sampling of transient combustion, 9:31362 (R;US)
Mathematical Models
Vortex methods and turbulent combustion, 9:31457 (R;US)
Research Programs
Effect of US coal exports on domestic economic growth and on US national security (1983 to 2000), 9:30153 (R;US)
New light on combustion research, 9:31364 (RA;US)
Sandia technology. Vol. 8, No. 1, 9:31363 (R;US)
COMBUSTION ENGINEERING STANDARD REACTOR
See CE STANDARD REACTOR
COMBUSTION PRODUCTS
Chemical Analysis
Sampling and analysis methods for hazardous waste combustion. Final report, 9:31660 (R;US)
COMBUSTORS
See also CATALYTIC COMBUSTORS
FLUIDIZED-BED COMBUSTORS
Design
O'Connor Water-Cooled Rotary Combustor. A new proven technology, 9:31110 (BA;US)
Installation
Coal-fired MHD combustor development project, Phase IIIC. Third quarterly technical progress report, 1 January-30 April, 1984, 9:31045 (R;US)
Performance Testing
Coal-fired MHD combustor development project, Phase IIIC. Third quarterly technical progress report, 1 January-30 April, 1984, 9:31045 (R;US)
COMMERCIAL BUILDINGS
Energy Audits
Transportation energy management: transit operator facilities. Volume II. Field guide, 9:31063 (R;US)
Energy Conservation
Bright ideas. An energy conservation guide for small businesses, 9:31071 (R;US)
Energy Efficiency
Multiple regression techniques applied to fenestration effects on commercial building energy performance, 9:31065 (R;US)
Passive Solar Heating Systems
Passive solar commercial buildings project. Project status report, January 1-January 31, 1984, 9:30548 (R;US)
Power Demand
How fenestration can significantly affect energy use in commercial buildings, 9:31066 (R;US)
Solar Heating Systems
Solar heating, cooling and controller system for industrial and commercial building, 9:30555 (R;US)
Total Energy Systems
Diesel engine total energy system development in residential/commercial applications by 2000, 9:31056 (R;US)
Windows
How fenestration can significantly affect energy use in commercial buildings, 9:31066 (R;US)
Multiple regression techniques applied to fenestration effects on commercial building energy performance, 9:31065 (R;US)
COMMERCIAL SECTOR
Security
Survey of commercial non-nuclear security programs. Final report, 9:30405 (R;US)
COMMUNICATIONS
Bibliographies
Annotated archive of communication references: empirical and theoretical works, 9:32391 (R;US)
Optimization
Practical writing and editing techniques, 9:32396 (R;US)
Professional Personnel
Terminal oversight: the editor and the word processor, 9:32397 (R;US)
COMPOSITE MATERIALS
Fabrication
Liquid metal infiltration of an aluminum alloy into a packed column of B_4C particles, 9:31239 (R;US)
Mechanical Properties
Improvements in mechanical properties in SiC by the addition of TiC particles, 9:31238 (R;US)
COMPOUND-NUCLEUS REACTIONS
Angular Correlation
Angular correlations in the evaporation processes, 9:32222 (RA;SU;In Russian)
Coupled Channel Theory
Accounting for the contribution of a compound reaction in the presence of channel coupling, 9:32221 (RA;SU;In Russian)
Statistical Models
Angular correlations in the evaporation processes, 9:32222 (RA;SU;In Russian)
COMPOUNDS (ORGANIC)
See ORGANIC COMPOUNDS
COMPUTER CODES
Computer codes are indexed by their initial letter and CODES, e.g., A CODES. If the code name begins with a number the code is indexed to NUMBER CODES.
B Codes
Magnetohydrodynamic equilibrium and stability of stellarators, 9:32350 (R;US)
C Codes
Dynamic analysis of the condensate feedwater system in boiling water reactor plants, 9:30707 (J;US)
Phenomenological uncertainties in the suspended radionuclide concentrations in containment during severe LWR accidents (CONTAIN code), 9:30947 (R;US)
D Codes
DIF3D: a code to solve one-, two-, and three-dimensional finite-difference diffusion theory problems, 9:30761 (R;US)
DIGMAN: a computer program to illustrate the complexities in sampling commercial low-level waste sites for radionuclide spills or migration, 9:30387 (R;US)
DYNA3D user's manual (nonlinear dynamic analysis of solids in three dimensions), 9:32421 (R;US)
I Codes
Portable microcomputer for the analysis of plutonium gamma-ray spectra. Volume II. Software description and listings (IAEAPU), 9:31296 (R;US)
K Codes
KINE--A one-dimensional dynamics program for pressurized water reactors with partial boiling in the core, 9:30738 (J;US)
M Codes
MARY: a computer code for the analysis of γ-rays following compound inelastic scattering of neutrons in experiments

using close neutron source-to-scatterer geometry, 9:32067 (R;US)
Maintenance
Prolonging the life of software, 9:32415 (R;US)
O Codes
Heavy ion elastic scattering code : OPTHI, 9:32157 (R;IN)
Quality Control
Computer program CDCID: an automated quality control program using CDC update, 9:30797 (R;US)
S Codes
SARTEMP2 - A computer program to calculate power and temperatures in a transport flask during a criticality accident, 9:31400 (R;GB)
Smoother interpolant for DE/STEP, INTRP and DEABM: II, 9:32418 (R;US)
Statistical identification of effective input variables (SCREEN), 9:30855 (R;US)
Spent Fuel Casks
SARTEMP2 - A computer program to calculate power and temperatures in a transport flask during a criticality accident, 9:31400 (R;GB)

COMPUTER GRAPHICS
Images
Computer graphics distortion of IMAX and OMNIMAX projection, 9:32423 (R;US)
Manuals
Guide to Graphics at ANL. Rev., 9:32404 (R;US)

COMPUTER LANGUAGES
See PROGRAMMING LANGUAGES

COMPUTER NETWORKS
Classification
Local area networks: A matter of choice, 9:32426 (J;US)
Data Transmission
Local area networks for distributed intelligent systems, 9:32436 (RA;AT)
Technology Assessment
Local area networks: A matter of choice, 9:32426 (J;US)
Technology Utilization
Local area networks: A matter of choice, 9:32426 (J;US)

COMPUTER PROGRAMMING
See PROGRAMMING

COMPUTER PROGRAMS
See COMPUTER CODES

COMPUTER-AIDED DESIGN
Perception of graphic system data base problems and needs from a numerical control programmer's viewpoint, 9:31368 (R;US)
Computer Graphics
Raster scan algorithm for generating hidden isoparametric surfaces, 9:32408 (R;US)
Finite Element Method
Raster scan algorithm for generating hidden isoparametric surfaces, 9:32408 (R;US)
Meetings
3rd DOE workshop on computer-aided engineering: viewgraph supplement, 9:31376 (R;US)

COMPUTER-AIDED MANUFACTURING
Perception of graphic system data base problems and needs from a numerical control programmer's viewpoint, 9:31368 (R;US)

COMPUTERIZED CONTROL SYSTEMS
Recommendations
H-Coal pilot plant. Final report. Volumes IX and X, 9:30112 (R;US)

COMPUTERIZED SIMULATION
Artificial Intelligence
AI/Simulation Fusion Project at Lawrence Livermore National Laboratory, 9:32424 (R;US)

COMPUTERS
See also DEC COMPUTERS
DIGITAL COMPUTERS
MICROPROCESSORS
Security
Automated procedure for performing computer security risk analysis, 9:30403 (R;US)

CONDENSATES
Mutagen Screening
Interim report on the genetic and animal toxicity testing of SRC-I products, intermediates, and waste materials. Appendix A, Volume 3. Microbial mutagenicity evaluations (Ames Test) Option IB reports, 9:30125 (R;US)

CONDENSERS (ELECTRIC)
See CAPACITORS

CONGO DEMOCRATIC REPUBLIC
See ZAIRE REPUBLIC

CONING

CONTAINERS
See also PRESSURE VESSELS
TANKS
Decontamination
Decontamination processes for waste glass canisters, 9:30369 (J;US)
Surface Contamination
Decontamination processes for waste glass canisters, 9:30369 (J;US)

CONTAINMENT
See also CONTAINMENT BUILDINGS
CONTAINMENT SHELLS
CONTAINMENT SYSTEMS
Failures
Containment analysis techniques: a state-of-the-art summary. Final report, 9:30937 (R;US)
Performance
Analysis of a 1:8 scale steel containment model subject to internal static pressurization, 9:30952 (R;US)
Scale Models
Plans for a 1/6th scale reinforced concrete containment model, 9:30948 (R;US)

CONTAINMENT BUILDINGS
Performance Testing
Integrity of containment penetrations under severe accident conditions (PWR; BWR), 9:30949 (R;US)
Thermal Stresses
Integrity of containment penetrations under severe accident conditions (PWR; BWR), 9:30949 (R;US)

CONTAINMENT SHELLS
Pressurizing
Response of steel containment models to internal pressurization, 9:30953 (R;US)

CONTAINMENT SPRAY SYSTEMS
Process Solutions
Experimental modeling of hydrogen evolution rates from surfaces with exposed aluminum in contact with containment

sprays in pressurized water reactor nuclear power plants, 9:30740 (J;US)
CONTAINMENT SYSTEMS
See also CONTAINMENT SPRAY SYSTEMS
Activity Levels
Phenomenological uncertainties in the suspended radionuclide concentrations in containment during severe LWR accidents, 9:30947 (R;US)
Computerized Simulation
Numerical simulation of boiling water reactor ventclearing hydrodynamics, 9:30712 (J;US)
Decontamination
BWR torus decontamination and resulting radwaste impact, 9:30839 (RA;US)
Fluid-Structure Interactions
Numerical simulation of boiling water reactor ventclearing hydrodynamics, 9:30712 (J;US)
Hydrodynamics
Numerical simulation of boiling water reactor ventclearing hydrodynamics, 9:30712 (J;US)
Radioactivity Transport
Phenomenological uncertainties in the suspended radionuclide concentrations in containment during severe LWR accidents, 9:30947 (R;US)
Vents
Numerical simulation of boiling water reactor ventclearing hydrodynamics, 9:30712 (J;US)
CONTAMINATION (INTERNAL)
See RADIONUCLIDE KINETICS
CONTENT ANALYSIS
See CHEMICAL ANALYSIS
CONTINENTAL SHELF
Baseline Ecology
Turtles, birds, and mammals in the northern Gulf of Mexico and nearby Atlantic waters: an overview based on aerial surveys of OCS (Outer Continental Shelf) areas, with emphasis on oil and gas effects, 9:31701 (R;US)
Oil Fields
Summary of exploration development and production activities on the Norwegian continental shelf in the next few years, 9:30229 (RA;DK;In Norwegian)
Resource Development
Annual petroleum review. Volume 1, 9:30248 (R;US)
CONTINUOUS MINERS
Cutting Tools
Coal-cutting forces and primary dust generation using radial gage cutters. Report of investigations/1983, 9:30210 (R;US)
CONTROL (INSPECTION)
See INSPECTION
CONTROL (RADIOACTIVITY)

COOLING TOWERS
Plumes
User's manual: cooling-tower-plume prediction code, 9:31677 (R;US)
Water Requirements
Use of treated gasification wastewater in a pilot cooling tower. Phase I. Final report for the period ending January 31, 1984, 9:30116 (R;US)
COOLING WATER CHEMICAL TREATMENT
See WATER CHEMISTRY
COPPER
Carbon 12 Reactions
Deuteron inclusive spectra from collisions of ^{12}C with different targets at 3.6 GeV/nucl., 9:32079 (RA;HU)
Deformation
High-strain-rate measurements of dislocation mobility, 9:31200 (R;US)
Dislocations
High-strain-rate measurements of dislocation mobility, 9:31200 (R;US)
Electronic Structure
Linear augmented-Slater-type-orbital method for electronic-structure calculations, 9:32262 (J;US)
Flow Stress
High-strain-rate measurements of dislocation mobility, 9:31200 (R;US)
Ion Collisions
Light emission from grazing incidence interaction of light ions with clean Cu(110), 9:31896 (RA;AT)
Material Balance
Elemental partitioning in ash depositories and material balances for a coal burning facility by spark source mass spectrometry, 9:30167 (J;US)
Polishing
Microstructural stability of copper electroplate, 9:31199 (R;US)
Surface Finishing
Microstructural stability of copper electroplate, 9:31199 (R;US)
Surface Properties
Light emission from grazing incidence interaction of light ions with clean Cu(110), 9:31896 (RA;AT)
COPPER 64 TARGET
Proton Reactions
Cumulative production of tritium, ^{3}He, ^{4}He nuclei, 9:32089 (R;XJ;In Russian)
COPPER 65 REACTIONS
Fusion Reactions
Evaporation decay and associated gamma multiplicity for ^{204}Rn via three fusion channels, 9:32144 (J;US)
COPPER ALLOYS
See also COPPER BASE ALLOYS
Electric Conductivity
Thermopower and resistivity in amorphous Cu sub(1-x) Zr sub(x) alloys, 9:31161 (RA;BR)

Magnetic Properties
Magnetic properties of N/sub p/M_4Al_9 intermetallic compounds (M = Cr, Cu) studied by Moessbauer effect magnetic susceptibility and neutron diffraction, 9:31182 (RA;IL)

COPPER BASE ALLOYS
See also BRASS
HEUSLER ALLOYS
TUNGSTEN BRONZE
Corrosion
Corrosion of iron, aluminum and copper-base alloys in glycols under simulated solar collector conditions, 9:30572 (J;US)

COPPER OXIDES
Thermochemical Processes
Use of oxides in thermochemical water-splitting cycles for solar heat sources. Copper oxides, 9:30436 (R;US)
Use of oxides in thermochemical water-splitting cycles for solar heat sources. Copper oxides. Revision, 9:30437 (R;US)

COPPER SULFIDES
Chemical Coating
Production and characterization of Cu_2S obtained by dipping from CdS chemically sprayed. Study of heat treatments of Cu_2S/CdS sprayed solar cells, 9:30512 (R;FR;In French)

COPPER VAPOR LASERS
See GAS LASERS

CURIUM 242
Neutron Emission
Neutron emission characteristics of spent boiling water reactor fuel, 9:30706 (J;US)
Production
The role of plutonium-238 in nuclear fuel cycles, 9:30711 (J;US)
CURIUM 244
Neutron Emission
Neutron emission characteristics of spent boiling water reactor fuel, 9:30706 (J;US)
CURIUM COMPOUNDS
Diffusion
Limit diffusion coefficients and hydration (numbers) of some trivalent actinide and lanthanide ions, 9:31358 (RA;IL)
Hydration
Limit diffusion coefficients and hydration (numbers) of some trivalent actinide and lanthanide ions, 9:31358 (RA;IL)
CURRENT-DRIVE HEATING
Two-Dimensional Calculations
Solution of the relativistic 2-D Fokker-Planck equation for LH current drive, 9:32306 (R;US)
CURRENTS (WATER)
See WATER CURRENTS
CUTTER LOADERS
See also COAL PLOWS
CONTINUOUS MINERS
HEADING MACHINES
SHEARER LOADERS
Computerized Control Systems
Planning and use of a computer-controlled roll-loader, 9:30202 (R;DE;In German)
Operation
Roller operation with shield-type support and pneumatic stowing up to 60 gon dip, 9:30205 (R;DE;In German)
CYANOBACTERIA
Screening
Photo/biological hydrogen subprogram (Rhodopseudomonas, Chlamydomonas, Escherichia Anabaena), 9:30439 (RA;US)
CYANOGEN
Photolysis
Chemical reaction as a quantum transition, 9:32280 (R;US)
CYCLOALKANES
See also CYCLOHEXANE
Hydrogenation
Characterization of Ru zeolite catalysts by a hydrogenolysis test reaction network (Cyclopropane), 9:31320 (RA;US)
Structure and properties of zeolite-supported $Ru_3(CO)_{12}$ catalysts (Cyclopropane hydrogenolysis), 9:30461 (RA;US)
CYCLOHEXANE
Pyrolysis
Hydropyrolysis of model hydrocarbons in the gaseous phase, 9:30470 (R;DE;In German)
CYCLONE SEPARATORS
Specifications
H-Coal Pilot Plant. Volume V. 4.0 - equipment performance: 4.9 - solids separation, 4.10 - block valves, 4.11 - control valves. Final report, 9:30108 (R;US)
CYCLOPENTADIENE
Chemical Reactions
Characterization and chemistry of vinylketene prepared by flash vacuum pyrolysis. Study of the flash vacuum pyrolysis of hydroaromatic compounds: 5,8-diphenyltetralin and the parent and substituted 5,6,11,12-tetrahydrodibenzo[a,e]cyclooctenes. Revision 1, 9:31322 (R;US)
Reactivity of $M(NEt_2)_4$ towards cyclopentadiene. Synthesis, characterization and reactivity of some MCpsub(n)(NEt2)sub(4-n) (M = U(IV)) and Th(IV), 9:31352 (RA;IL)
CYCLOTRONS
Reviews
International cyclotron conferences: twenty-five years of progress, 9:31470 (R;US)
CYLINDERS
Objects of cylindrical shape. For containers see headings such as GAS CYLINDERS.
Weight Measurement
Semiportable load-cell-based weighing system prototype of 18.14-metric-ton (20-ton) capacity for UF_6 cylinder weight verifications: description and testing procedure, 9:30399 (R;US)
CYSTEAMINE
See MEA

D

D PLUS RESONANCES
See D-1865 RESONANCES
D ZERO RESONANCES
See D-1865 RESONANCES
D-1865 RESONANCES
Weak Hadronic Decay
Lifetime measurements and tau physics at PEP, 9:32000 (R;US)
Weak Particle Decay
Weak decays at PEP, 9:31998 (R;US)
DAIRY INDUSTRY
Energy Conservation
Energy conservation in meat, poultry, and dairy processing. Final report: development of a proposed conference series, 9:31086 (R;US)
DAMS
Site Selection
A comparison of environmental issues related to development of small hydropower resources at new versus existing sites, 9:30502 (J;US)
DATA
Data Processing
Inaccuracies in the calculation of standard deviation with electronic calculators, 9:32433 (J;US)
DATA ACQUISITION
Meetings
Data acquisition and analysis systems for nuclear research and applications. Current status and trends. Proceedings of an advisory group meeting organized by the IAEA and held in Vienna, Austria, 13-17 September 1982, 9:32438 (R;AT)

DATA ACQUISITION SYSTEMS
Techniques for data acquisition and data analysis, 9:31622 (RA;AT)
Design
Design of automated nuclear data systems for industrial application, 9:31537 (RA;AT)
Developing Countries
LABEN's view of the design of data acquisition and processing systems to be used in developing countries, 9:31617 (RA;AT)
Gas Spills
LGF data acquisition system, 9:31663 (RA;US)
Gaseous Diffusion
LGF data acquisition system, 9:31663 (RA;US)
Maintenance
Preventive maintenance, service and repair of data acquisition and analysis systems, 9:31539 (RA;AT)
Microprocessors
Microprocessor based dual bus structured data acquisition and processing system : DAPS-80, 9:32405 (R;IN)
Programming
Software for nuclear data acquisition systems, 9:32437 (RA;AT)
Repair
Preventive maintenance, service and repair of data acquisition and analysis systems, 9:31539 (RA;AT)
Specifications
Canberra view of nuclear data acquisition and analysis, 9:31621 (RA;AT)
Data acquisition and analysis systems. "Tools of the Trade", 9:31619 (RA;AT)
Recent developments in microprocessor-based data systems, 9:31620 (RA;AT)
DATA ANALYSIS
Meetings
Data acquisition and analysis systems for nuclear research and applications. Current status and trends. Proceedings of an advisory group meeting organized by the IAEA and held in Vienna, Austria, 13-17 September 1982, 9:32438 (R;AT)
DATA BASE MANAGEMENT
Magnetic Tapes
DOE Energy Data Base: input magnetic tape description, 9:32435 (R;US)
DATA DISPLAY DEVICES
See DISPLAY DEVICES
DATA DISPLAY SYSTEMS
See DISPLAY DEVICES
DATA PROCESSING
Manipulation of unit facts.
See also DISTRIBUTED DATA PROCESSING
Algorithms
Data evaluation efficiency on the base of a nonuniform sample, 9:32413 (R;XJ;In Russian)
Equipment Interfaces
I/O channel interface, 9:32417 (R;US)
Signal Distortion
Distortions in frequency spectra of signals associated with sampling-pulse shapes, 9:32412 (R;IT)
DATA PROCESSORS
See DIGITAL COMPUTERS
DATA STORAGE DEVICES
See MEMORY DEVICES
DATA TRANSMISSION SYSTEMS
Classification
Local area networks: A matter of choice, 9:32426 (J;US)
Pulse Shapers
Distortion and pulse shaping of short electrical pulses from dispersion of microstrip lines, 9:31587 (J;US)
Signal Distortion
Distortion and pulse shaping of short electrical pulses from dispersion of microstrip lines, 9:31587 (J;US)
Technology Assessment
Local area networks: A matter of choice, 9:32426 (J;US)
Technology Utilization
Local area networks: A matter of choice, 9:32426 (J;US)
DC TO AC INVERTERS
See INVERTERS
DEBRIS (NUCLEAR)
See FISSION PRODUCTS
DEC COMPUTERS
Computers manufactured by Digital Equipment Corporation.
Equipment Interfaces
FASTBUS Processor Interface for VAX-11, 9:31577 (J;US)
Fastbus System
FASTBUS Processor Interface for VAX-11, 9:31577 (J;US)
DECALSO
See ION EXCHANGE MATERIALS
DECHANNELING
See CHANNELING
DECIDUOUS TREES
See TREES
DECIMETER WAVE RADIATION (1-3 DM)
See RADIOWAVE RADIATION
DECIMETER WAVE RADIATION (3-10DM)
See RADIOWAVE RADIATION
DECONTAMINATION
Abrasives
Liquid abrasive decontamination operating experience, 9:30841 (RA;US)
Steam generator decontamination, 9:30842 (RA;US)
Comparative Evaluations
Decontamination processes for waste glass canisters, 9:30369 (J;US)
Radioactive Waste Processing
Decontamination impacts on waste management and disposal, 9:30929 (RA;US)
DECONTAMINATION FACTOR
See DECONTAMINATION
DEEP INELASTIC HEAVY ION REACTIONS
Dissipation Factor
Collectivity and statistics in deeply-inelastic heavy-ion collisions, 9:32185 (R;DE)
Inclusive Interactions
Emission of light fragments in the transport model for nucleus-nucleus collisions at high energies, 9:32167 (RA;DE;In German)
Inclusive production of K^+-mesons in collisions between cold and hot nucleons, 9:32078 (RA;DE;In German)
Nuclear Matter
General theory of nuclear non-equilibrium systems. Statistical equations and 'nuclear hydrodynamics', 9:32159 (RA;DE)
Nuclear Reaction Kinetics
Collectivity and statistics in deeply-inelastic heavy-ion collisions, 9:32185 (R;DE)
Deep inelastic nuclear reactions and their features, 9:32206 (RA;HU)
Light ion emission from heavy ion induced reactions, 9:32207 (RA;HU)
Particle Production
Inclusive production of K^+-mesons in collisions between cold and hot nucleons, 9:32078 (RA;DE;In German)
DEEP INELASTIC SCATTERING
Multiplicity
Average multiplicities in deep inelastic processes and their interpretation, 9:32014 (R;SU)
DEFORMED NUCLEI
Ground States
Triaxial ground state deformations in transitional nuclei, 9:32137 (RA;DE;In German)
Vibrational States
New collective states in deformed nuclei, 9:32129 (RA;DE;In German)
DEGRADATION (RADIOINDUCED)
See RADIOLYSIS
DEHPA
See HDEHP
DELAYED NEUTRONS
Neutron Flux Tilting
Multidimensional space-time kinetics of a heavy water moderated nuclear reactor, 9:30760 (J;US)
DELAYED PROTON PRECURSORS
Study of beta-delayed two-proton emission in ^{23}Al and ^{26}P and search for new emitters, 9:32099 (R;US)

DELETIONS (CHROMOSOMAL)
See CHROMOSOMAL ABERRATIONS
DEMINERALIZERS
Solidification
Review of a test program for qualifying the solidification of Epicor-II resins with cement, 9:30346 (R;US)
DENMARK
Air Pollution
EMEP bulletin 1981, 9:31654 (R;DK;In Danish)
Energy Conservation
Residential energy use and conservation in Denmark, 1965-1980, 9:31017 (J;GB)
Energy Consumption
Residential energy use and conservation in Denmark, 1965-1980, 9:31017 (J;GB)
Offshore Operations
Norwegian-Danish offshore 82. Report, 9:30260 (R;DK;In Norwegian)
Residential Sector
Residential energy use and conservation in Denmark, 1965-1980, 9:31017 (J;GB)
DENSIMETERS
Design
Improved design of magnetoinduction densimeter and γ-absorptiometer, 9:31624 (RA;SU;In Russian)
DENSITOMETERS
Calibration
Compact K-edge densitometer, 9:30402 (R;US)
Performance Testing
Compact K-edge densitometer, 9:30402 (R;US)
DENSITY (NEUTRON)
See NEUTRON DENSITY
DEOXYPENTOSE NUCLEIC ACID
See DNA
DEOXYRIBONUCLEIC ACID
See DNA
DEPARTMENT OF DEFENSE
See US DOD
DEPARTMENT OF INTERIOR
See US DOI
DEPARTMENT OF TRANSPORTATION
See US DOT
DEPOSITS
Corrosion Products
Centerwall deposition patterns in a large supercritical steam generator, 9:30643 (RA;US)
DEPRESSURIZATION SYSTEMS
Evaluation
FRANTIC II: applications to standby safety systems, 9:30936 (R;US)
DESALINATION
Pilot Plants
Comparative study of parameters used in design and operation of desalination experimental facility versus the process parameters in a commercial desalination plant, 9:30610 (R;IN)
DESALINATION PLANTS
Ion Exchange
Cation exchange pretreatment studies for high recovery - Yuma desalting plant, 9:31325 (R;US)
DESERTRON
See SUPERCONDUCTING SUPER COLLIDER
DESOXYRIBONUCLEIC ACID
See DNA
DESULFOVIBRIO
Physiology
Anaerobic digestion subprogram, 9:30474 (RA;US)
DESULFURIZATION
Catalysts
Study of the influence of porous texture of $CoO-MoO_3/Al_2O_3$ catalysts on hydrotreating of Boscan crude oil, 9:30233 (R;FR;In French)
Economic Analysis
Coal desulfurization during the combustion of coal/oil/water emulsions: an economic alternative clean liquid fuel. Final report, 9:30172 (R;US)
DETECTORS (RADIATION)
See RADIATION DETECTORS
DEUTERIDES
Crystal Structure
^{239}Pu Dsub(2.25) neutron powder diffraction study, 9:31350 (RA;IL)
Crystal-Phase Transformations
Neutron diffraction study on β_1-β_2 transformation in Ta_2D, 9:31222 (R;US)
Neutron Diffraction
Neutron diffraction study on β_1-β_2 transformation in Ta_2D, 9:31222 (R;US)
DEUTERIUM
Chemical Reactions
Chemical reaction as a quantum transition ($ClI + D \rightarrow Cl + ID$; $OH + D \rightarrow OD + H$), 9:32280 (R;US)
Isotope Effects
Trifluoromethanesulfonyl chloride for identification of oxygen, nitrogen, and sulfur functional groups by fluorine-19 nuclear magnetic resonance spectrometry, 9:31305 (J;US)
Muonic Molecules
Application of the muonium spin rotation technique to a study of the gas phase chemical kinetics of muonium reaction with the halogens and hydrogen halides, 9:31873 (R;CA)
DEUTERIUM IONS
Collisions
Rutherford backscattering, nuclear reaction and channeling studies of nitrogen implanted single-crystal stainless steel, 9:31895 (RA;AT)
DEUTERIUM OXIDES
See HEAVY WATER
DEUTERIUM TARGET
Neutron Reactions
Off-shell effects in nucleon-deuteron polarization observables, 9:32231 (R;AT)
Pion production on light nuclei by medium energy neutrons, 9:32070 (RA;HU)
Some applications of the evolution method in a coupling constant in nuclear physics, 9:32225 (R;SU;In Russian)
Pion Plus Reactions
Energy dependent partial wave analysis of the $PI+d \rightarrow pp$ reaction in the region $\sqrt{s}$=2.09-2.42 GeV, 9:32072 (RA;HU)
Study of the differential cross section of the $PI+d \rightarrow pp$ reaction at pion energies 280, 300, 330, 357, 390, 420 and 450 MeV, 9:32071 (RA;SU)
Pion Reactions
Effects of quark degrees of freedom in πd and pd scattering at large angles, 9:32069 (RA;HU)
Proton Reactions
Effects of quark degrees of freedom in πd and pd scattering at large angles, 9:32069 (RA;HU)
Vapor Condensation
Liuid hydrogen target with hydrogen recondensation by helium, 9:31508 (R;SU;In Russian)
DEUTERON BEAMS
Ion-Atom Collisions
Molecular ion beam experiment: determination of ion beam composition and the distribution of paired ion separations, 9:31876 (RA;US)
DEUTERON REACTIONS
Breakup Reactions
Determination of parameters of deuteron six-quark component, 9:32087 (R;SU)
Dibaryon Resonances
Excitation of dibaryon resonances in deuteron nucleus collisions, 9:32110 (RA;HU)
Inelastic Scattering
Multiplicity distributions of π^- mesons produced in light nuclei interaction with tantalum nuclei for momentum interval 2-5 GeV/c per nucleon, 9:32142 (R;XJ;In Russian)
One-Nucleon Transfer Reactions
CCBA analysis of $13/2^+$ levels in ^{145}Sm, 9:32109 (RA;DE;In German)
Peripheral Collisions
Excitation of dibaryon resonances in deuteron nucleus collisions, 9:32110 (RA;HU)

Stripping
Study of vector analyzing power of the $^{9}Be(d,p_0)^{10}Be$ and 9Be $(d,p_1)^{10}Be$ * (3.37 MeV) reactions at E/subα/=2.0-2.8 MeV, 9:32086 (RA;SU;In Russian)

DEUTERON-DEUTERON INTERACTIONS
See DEUTERIUM TARGET
DEUTERON REACTIONS

DEUTERONS
Bag Model
Pomeron colour structure and hadron scattering on the six-quark deuteron configuration, 9:32188 (RA;HU)
Particle Production
Experimental data on the inclusive cross sections of protons, deuterons and tritium cumulative production, 9:31990 (R;XJ;In Russian)
Quark Model
Determination of parameters of deuteron six-quark component, 9:32087 (R;SU)

DEVELOPED COUNTRIES
Economic Development
Elements of some national policies for bio-technology, 9:31042 (R;US)
Energy Policy
Effect of US coal exports on domestic economic growth and on US national security (1983 to 2000), 9:30153 (R;US)

DEVELOPING COUNTRIES
See also HUNGARY
INDONESIA
ISRAEL
REPUBLIC OF KOREA
SPAIN
TURKEY
ZAIRE REPUBLIC
Data Acquisition Systems
LABEN's view of the design of data acquisition and processing systems to be used in developing countries, 9:31617 (RA;AT)
Economic Policy
Role of the energy problem in the North-South relations, 9:30997 (RA;CH;In German and French)
Energy Policy
Effect of US coal exports on domestic economic growth and on US national security (1983 to 2000), 9:30153 (R;US)
Role of the energy problem in the North-South relations, 9:30997 (RA;CH;In German and French)

DEVONIAN SHALES

DIAPHRAGMS (THERMONUCLEAR DEVICE)
See LIMITERS

DIBARYON RESONANCES
Production
Excitation of dibaryon resonances in deuteron nucleus collisions, 9:32110 (RA;HU)

DIELS-ALDER REACTION
Calorimetry
Energy storage capacity of reversible liquid phase Diels-Alder reactions as determined by drop calorimetry, 9:30975 (R;US)

DIESEL ENGINES
Certification
Methods of reducing exhaust emissions from diesel engines and improving safety, 9:30197 (RA;US)
Safety and productivity of mining equipment with diesel engines, 9:30192 (RA;US)
Exhaust Gases
Diesel equipment in underground coal mines, 9:30219 (R;US)
Epidemiological studies of hazards from diesel emissions, 9:30193 (RA;US)
Health hazards from diesel exhausts, 9:30221 (RA;US)
Health risks from light-duty diesel vehicles, 9:31816 (J;US)
Similarity of some organic compounds in spark-ignition and diesel engine particulate extracts, 9:31666 (J;US)
Inspection
Requirements for diesel engine approval and maintenance in Kentucky (Kentucky), 9:30195 (RA;US)
Maintenance
Requirements for diesel engine approval and maintenance in Kentucky (Kentucky), 9:30195 (RA;US)
Permit Applications
Requirements for diesel engine approval and maintenance in Kentucky (Kentucky), 9:30195 (RA;US)
Safety Engineering
Safety and productivity of mining equipment with diesel engines, 9:30192 (RA;US)
Scrubbers
Methods of reducing exhaust emissions from diesel engines and improving safety, 9:30197 (RA;US)
Temperature Measurement
Radioisotopes in wear investigation of combustion engines, 9:30427 (RA;SU)
Wear
Radioisotopes in wear investigation of combustion engines, 9:30427 (RA;SU)

DIESEL FUELS
Storage
Relationship between vehicle fuel temperature and ambient temperature. 1981 CRC (Coordinating Research Council) Kapuskasing field test. Final contractor report, 9:30251 (R;US)
Temperature Measurement
Relationship between vehicle fuel temperature and ambient temperature. 1981 CRC (Coordinating Research Council) Kapuskasing field test. Final contractor report, 9:30251 (R;US)

DIESEL OIL (FRACTION)
See DIESEL FUELS

DIFFERENTIAL EQUATIONS
See also CHAPMAN-KOLMOGOROV EQUATION
NEUTRON DIFFUSION EQUATION
Computer Codes
Smoother interpolant for DE/STEP, INTRP and DEABM: II, 9:32418 (R;US)
Numerical Solution
Smoother interpolant for DE/STEP, INTRP and DEABM: II, 9:32418 (R;US)

DIFFRACTION GRATINGS
See GRATINGS

DIFFRACTOMETERS
Analog-to-Digital Converters
TsPUP-1 digital converter of angular displacements, 9:31615 (R;SU;In Russian)

DIGITAL COMPUTERS
Equipment Interfaces
I/O channel interface, 9:32417 (R;US)
Parallel Processing
European scientific notes. Volume 38. Number 1. Monthly publication, 9:32402 (R;US)

DIGITAL FILTERS
Errors
Power estimation in the pressurized water reactor, 9:30742 (J;US)
Sensitivity Analysis
Power estimation in the pressurized water reactor, 9:30742 (J;US)

DIGITIZERS
See also SCANNING MEASURING PROJECTORS
Design
Analog quadrature signal to phase angle data conversion by a quadrature digitizer and quadrature counter, 9:31451 (P;US)
Operation
Analog quadrature signal to phase angle data conversion by a quadrature digitizer and quadrature counter, 9:31451 (P;US)

1,2-DIHYDROXYBENZENE
See PYROCATECHOL

DIHYDROXYBENZENE-ORTHO
See PYROCATECHOL

DIMETHYL SULFOXIDE
See DMSO

2,2-DIMETHYLPROPANE
See 2-2-DIMETHYLPROPANE

2-2-DIMETHYLPROPANE
Muonium
Muonium atoms in liquid and solid neopentane, 9:31962 (R;CA)
DIODE TRANSISTORS
See TRANSISTORS
DIOLS
See GLYCOLS
DIRAC MONOPOLES
See MAGNETIC MONOPOLES
DIRECT CONTACT HEAT EXCHANGERS
Technology Assessment
State of technology of direct contact heat exchanging, 9:31093 (R;US)
DIRECT GAIN SYSTEMS
Prior to September 1980 HEAT GAIN was used to index this concept.
Performance
Direct gain passive solar, domestic hot water and wind generation system. Final technical report, 9:30553 (R;US)
DIRECT REACTIONS
See also TRANSFER REACTIONS
Nuclear Models
Approximations for direct multi-step reaction theories, 9:32169 (RA;DE;In German)
Description of continuum spectra in reactions with light ions by direct multi step processes, 9:32168 (RA;DE;In German)
DISCHARGES (ELECTRIC)
See ELECTRIC DISCHARGES
DISCHARGES (WASTES)
See WASTE DISPOSAL
DISCHARGING (REACTOR)
See REACTOR FUELING
DISEASE INCIDENCE
Mathematical Models
Hazard function modelling for dose-response analysis of cancer incidence in the A-bomb survivor data, 9:31769 (RA;US)
Modelling age- and time-dependent changes in the rates of radiation-induced cancers, 9:31770 (RA;US)
Statistical Models
Cancer mortality and incidence in the life span study: statistical methods used in reports five through ten, 9:31768 (RA;US)
Utilization of the Adult Health Study data: resources and methods of past and current analyses, 9:31778 (RA;US)
DISINTEGRATION (FISSION)
See FISSION
DISINTEGRATION (NUCLEAR PARTICLE)
See ANNIHILATION
DISPERSE SYSTEMS
See DISPERSIONS
DISPERSED STORAGE AND GENERATION
Operational and design considerations for electric distribution systems with dispersed storage and generation (DSG), 9:30607 (R;US)
Equipment Protection Devices
Protection of New York State Electric Utility Distribution Systems containing decentralized storage and generation devices. Final report, 9:30608 (R;US)
DISPERSIONS
For the state of aggregation in materials; if related to wave phenomena see DISPERSION RELATIONS or OPTICAL DISPERSION.
See also MIXTURES
Fluid Flow
Continuum theory for fiber suspensions, 9:31142 (R;US)
DISPERSIVE ION WAVES
See ION PLASMA WAVES
DISPLAY DEVICES
Health Hazards
Experimental studies relating environmental lighting and flicker to visual fatigue in VDT operators, 9:31818 (R;US)
Human Factors Engineering
Design of a generic interactive operator test station, 9:30825 (R;US)
Semiconductor Storage Devices
Modular hardware for the text and colour semigraphic information display on the TV monitors, 9:31431 (R;SU;In Russian)
DISPOSAL (WASTES)
See WASTE DISPOSAL
DISPROPORTIONATION
See OXIDATION
DISSOLVED OXYGEN
See OXYGEN
DISTILLATES
Animals
Interim report on the genetic and animal toxicity testing of SRC-I products, intermediates, and waste materials, 9:30123 (R;US)
Chemical Analysis
Interim report on the genetic and animal toxicity testing of SRC-I products, intermediates, and waste materials. Appendix C. Chemical evaluation of SRC samples for genetic toxicity testing - basic program reports, 9:30127 (R;US)
Chemical Preparation
Interim report on the genetic and animal toxicity testing of SRC-I products, intermediates, and waste materials. Appendix C. Chemical evaluation of SRC samples for genetic toxicity testing - basic program reports, 9:30127 (R;US)
Fractionation
Interim report on the genetic and animal toxicity testing of SRC-I products, intermediates, and waste materials. Appendix A. Volume 1. Microbial mutagenicity evaluations (Ames Test) basic program reports, 9:30124 (R;US)
Mutagen Screening
Interim report on the genetic and animal toxicity testing of SRC-I products, intermediates, and waste materials. Appendix A. Volume 1. Microbial mutagenicity evaluations (Ames Test) basic program reports, 9:30124 (R;US)
Sampling
Interim report on the genetic and animal toxicity testing of SRC-I products, intermediates, and waste materials. Appendix G. Sample history and documentation, 9:30131 (R;US)
Teratogenesis
Interim report on the genetic and animal toxicity testing of SRC-I products, intermediates, and waste materials. Appendix E. Subchronic dermal studies reports, 9:30129 (R;US)
Toxicity
Interim report on the genetic and animal toxicity testing of SRC-I products, intermediates, and waste materials, 9:30123 (R;US)
Interim report on the genetic and animal toxicity testing of SRC-I products, intermediates, and waste materials. Appendix D. Acute animal studies reports, 9:30128 (R;US)
Interim report on the genetic and animal toxicity testing of SRC-I products, intermediates, and waste materials. Appendix E. Subchronic dermal studies reports, 9:30129 (R;US)
DISTILLATION EQUIPMENT
Corrosion
H-Coal pilot plant. Final report. Volume VII. Materials evaluation, 9:30110 (R;US)
Materials Testing
H-Coal pilot plant. Final report. Volume VII. Materials evaluation, 9:30110 (R;US)
DISTRIBUTED COLLECTOR POWER PLANTS
Flat Plate Collectors
Operational demonstration of a field of high performance flat plate collectors with isothermal heat transport, 9:30563 (R;DE;In German)
Performance
Operational demonstration of a field of high performance flat plate collectors with isothermal heat transport, 9:30563 (R;DE;In German)
Thermal Energy Storage Equipment
Operational demonstration of a field of high performance flat plate collectors with isothermal heat transport, 9:30563 (R;DE;In German)

DISTRIBUTED DATA PROCESSING
Distributed intelligence versus central laboratory, 9:32410 (RA;AT)
DISTRICT COOLING
Power plant retrofit to district heating and cooling projects and grid-connected integrated community energy systems projects. Program summary meeting, 1983, 9:31104 (R;US)
DISTRICT HEATING
See also GEOTHERMAL DISTRICT HEATING
Power plant retrofit to district heating and cooling projects and grid-connected integrated community energy systems projects. Program summary meeting, 1983, 9:31104 (R;US)
Computerized Simulation
District heating model for use in regional energy planning. Thesis in cybernetics, 9:30994 (R;NO;In Norwegian)
Energy Management Systems
District heating model for use in regional energy planning. Thesis in cybernetics, 9:30994 (R;NO;In Norwegian)
Gas Turbines
Development of closed-cycle gas turbines in district heating applications by 2000, 9:31105 (R;US)
Meetings
Proceedings of the waste-to-energy workshop on small-scale combustion systems, 9:31103 (R;US)
Operating Cost
District heating model for use in regional energy planning. Thesis in cybernetics, 9:30994 (R;NO;In Norwegian)
DISTRICT OF COLUMBIA
See WASHINGTON DC
DIVERTORS
Impurities
Use of isotopically-enriched carbon probes for erosion/deposition measurements in the ASDEX divertor, 9:32299 (R;US)
DMSO
Biological Effects
Mechanisms of radiation-induced neoplastic cell transformation, 9:31789 (R;US)
DNA
Biological Radiation Effects
Charged-particle fluence and cellular morphometric inter-relations for linear energy transfer effects on progression through the cell cycle, 9:31761 (RA;US)
Fluorescence Spectroscopy
Versatility of laser induced fluorescence line narrowing in chemical analysis, 9:31288 (R;US)
Spatial Distribution
Charged-particle fluence and cellular morphometric inter-relations for linear energy transfer effects on progression through the cell cycle, 9:31761 (RA;US)
Strand Breaks
Production of DNA strand breaks by ionizing radiation of different quality and their consequences for cell inactivation, 9:31732 (R;DE;In German)
DODECANE
Pyrolysis
Hydropyrolysis of model hydrocarbons in the gaseous phase, 9:30470 (R;DE;In German)
DORMITORIES
See RESIDENTIAL BUILDINGS
DOSE DISTRIBUTIONS
See RADIATION DOSE DISTRIBUTIONS
DOSE RATEMETERS
Performance
Two high range survey meters for measuring γ and β dose rates, 9:31528 (R;CA)
DOSEMETERS
See also BIOLOGICAL DOSEMETERS
CHEMICAL DOSEMETERS
PHOTOGRAPHIC FILM DOSEMETERS
Depth Dose Distributions
Implications of depth dose equivalent concept in personnel dosimetry, 9:31533 (R;US)
Performance Testing
Progress report on a technical evaluation of four personal alpha-dosimeters in two underground uranium mines in the Elliot Lake area, 9:31558 (R;CA)
Specifications
Recent developments in microprocessor-based data systems, 9:31620 (RA;AT)
Thermistors
Inertial characteristics of cryogenic temperature sensors-dosemeters, 9:31550 (R;SU;In Russian)
DOSIMETERS
See DOSEMETERS
DOSIMETRY
See also GAMMA DOSIMETRY
MICRODOSIMETRY
NEUTRON DOSIMETRY
PERSONNEL DOSIMETRY
THERMOLUMINESCENT DOSIMETRY
Comparative Evaluations
Characteristics of current and expected dosimetry, 9:31775 (RA;US)
Potential additional data sources for dosimetry and biological re-evaluation, 9:31777 (RA;US)
Dose-Response Relationships
Use of cancer mortality data in Hiroshima and Nagasaki to assess various aspects of the radiation dosimetry, 9:31776 (RA;US)
Radiation Protection Laws
Austrian Italian cooperation in radiation protection dosimetry, 9:31741 (R;DE;In German)
DOUBLE BETA DECAY
Theoretical aspects of double beta decay, 9:32228 (R;US)
Beta Spectroscopy
Possibility of study on the double neutrinoless beta decay by means of semiconductor beta spectrameters, 9:31548 (RA;SU;In Russian)
Chiral Symmetry
Neutrinoless double-beta decay in left-right symmetric models, 9:32026 (R;CA)
DOUBLET 3 DEVICES
See DOUBLET REACTORS
DOUBLET REACTORS
Neutral Atom Beam Injection
High power neutral beam heating on Doublet III, 9:32311 (R;US)
Plasma Confinement
High power neutral beam heating on Doublet III, 9:32311 (R;US)
DOUNREAY PROTOTYPE FAST REACTOR
See PFR REACTOR
DOWEX
See ORGANIC ION EXCHANGERS
DRAG EFFECT
See ELECTROPHORESIS
DRIFT CHAMBERS
System of three-meter drift chambers operating in self-quenching mode, 9:31555 (R;XJ;In Russian)
Calibration
Investigation of drift chamber performances by means of cosmic particles, 9:31606 (RA;XJ;In Russian)
Control Systems
Drift chamber electronics setup for relativistic positronia studies, 9:31556 (R;XJ;In Russian)
Efficiency
Drift chamber characteristics for inclined track detection, 9:31542 (R;SU;In Russian)
Performance
Investigation of drift chamber performances by means of cosmic particles, 9:31606 (RA;XJ;In Russian)
Readout Systems
Drift chamber electronics setup for relativistic positronia studies, 9:31556 (R;XJ;In Russian)
High speed drift chamber readout system: TIRUS, 9:31594 (J;NL)
Spatial Resolution
Dimethylether: A low velocity, low diffusion drift chamber gas, 9:31598 (J;NL)
Measurement and simulation of the drift pulses and resolution in the micro-jet chamber, 9:31600 (J;NL)
MPS II drift chamber system, 9:31595 (J;NL)

Recent developments in high precision vertex chambers at SLAC, 9:31517 (R;US)
Specifications
Stereo, cylindrical drift chamber for muon decay experiments at LAMPF, 9:31596 (J;NL)
Wires
Study of ageing effects in wire chambers, 9:31599 (J;NL)
DRIFT (ELECTRON)
See ELECTRON DRIFT
DRIFT (ION)
See ION DRIFT
DRIFT (PLASMA)
See PLASMA DRIFT
DRILL BITS
Design
Shock mounted Stratapax oil well drilling bits. Final technical report, 9:30228 (R;US)
Field Tests
Shock mounted Stratapax oil well drilling bits. Final technical report, 9:30228 (R;US)
DRY SCRUBBERS
Air Pollution Abatement
Leachate of dry scrubber wastes, 9:31467 (J;US)
Performance
Air pollution control: an advanced state of the art technology, 9:30491 (BA;US)
Performance Testing
Laboratory/bench scale testing and evaluation of APT dry plate scrubber. Seventeenth quarterly report, March 1-May 31, 1984, 9:30170 (R;US)
Leachate of dry scrubber wastes, 9:31467 (J;US)
DRY STORAGE
Behavior in air at 175 to 250°C of UO_2 fuel fragments extracted from irradiated elements, 9:30306 (RA;US)
Oxidation rate of zirconium tubing in moist air between 250°C to 400°C, 9:30308 (RA;US)
Post-irradiation behaviour of defected UO_2 fuel elements in air at 220 to 250°C, 9:30305 (RA;US)
Uranium dioxide fuel oxidation in air below 350°C, 9:30307 (RA;US)
Design
Effect of known clad and pellet reactions on the GEC ESL design of dry vault store, 9:30309 (RA;US)
Fuel-Cladding Interactions
Effect of known clad and pellet reactions on the GEC ESL design of dry vault store, 9:30309 (RA;US)
Estimating the limiting temperature for dry storage with respect to stress corrosion cracking, 9:30310 (RA;US)
Meetings
Workshop on spent fuel/cladding reaction during dry storage, 9:30304 (R;US)
Temperature Dependence
Effect of known clad and pellet reactions on the GEC ESL design of dry vault store, 9:30309 (RA;US)
DRYERS, CLOTHES
See CLOTHES DRYERS
DRYOUT
Heat Transfer
TRAC-BD1/MOD1 post-dryout wall heat transfer, 9:30865 (R;US)
DRY-TYPE COOLING TOWERS
See COOLING TOWERS
DTO
See HEAVY WATER
DUAL-PURPOSE POWER PLANTS
Energy Storage Systems
Application of heat storage in increasing operating flexibility of newly built WWER type reactor power plants in the CSSR for peak electric power generation and for offsetting plant capacity decrease due to heat supply, 9:30793 (RA;CS;In Czech)
DUBNA SYNCHROCYCLOTRON
Alarm Systems
Multicomputer version of the ALARM system for the "F" installation, 9:31512 (R;XJ;In Russian)
Magnetic Fields
Method of experimental determination of the mean radial magnetic field component for the JINR phasotron, 9:31493 (R;XJ;In Russian)
On-Line Control Systems
Multicomputer version of the ALARM system for the "F" installation, 9:31512 (R;XJ;In Russian)
DUKOVANY V-2 REACTOR
Heat Storage
Application of heat storage in increasing operating flexibility of newly built WWER type reactor power plants in the CSSR for peak electric power generation and for offsetting plant capacity decrease due to heat supply, 9:30793 (RA;CS;In Czech)
DUSTS
Control
Coal-cutting forces and primary dust generation using radial gage cutters. Report of investigations/1983, 9:30210 (R;US)
Technical progress report No. 33 USBM contract JO318097; FMI-BMI-8148, April 1-April 30, 1984, 9:30199 (R;US)
DYMAC SYSTEM
See NUCLEAR MATERIALS MANAGEMENT PLUTONIUM
DYNAMIC MATERIALS ACCOUNTABILITY SYSTEM
See NUCLEAR MATERIALS MANAGEMENT PLUTONIUM
DYNAMICS
Computer Codes
DYNA3D user's manual (nonlinear dynamic analysis of solids in three dimensions), 9:32421 (R;US)
DYSPROSIUM 148
Beta-Plus Decay
Favoured β-transitions πhsub(11/2)->vhsub(9/2), 9:32127 (RA;DE;In German)
DYSPROSIUM ISOTOPES
See also DYSPROSIUM 148
Rotational States
HFB+nQP-method for the description of the rotational bands of deformed nuclei, 9:32158 (R;DE ;In German)

E

EARTH ATMOSPHERE
See also MAGNETOSPHERE STRATOSPHERE
Dynamics
Method for evaluation of atmospheric stability: application to the Casaccia site, 9:31642 (R;IT;IT)
EARTH CRUST
Structural Models
Utility of regional Chinese seismograms for source and path studies in central Asia, 9:31834 (R;US)
EARTH-COVERED BUILDINGS
Institutional Factors
Zoning for earth sheltered buildings. A guide for Minnesota communities, 9:31058 (R;US)
EARTHQUAKES
Emergency Plans
Examples of the use of geologic and seismologic information for earthquake-hazard reduction in southern California, 9:31837 (R;US)
Workshop on continuing actions to reduce losses from earthquakes in the Mississippi Valley area, 9:31823 (R;US)
Ground Motion
Engineering characterization of ground motion. Task I. Effects of characteristics of free-field motion on structural response, 9:31832 (R;US)
Hazards
Workshop on continuing actions to reduce losses from earthquakes in the Mississippi Valley area, 9:31823 (R;US)
Meetings
Workshop on continuing actions to reduce losses from earthquakes in the Mississippi Valley area, 9:31823 (R;US)

EBR-2 REACTOR
Transients
EBR-II transient operation and test capabilities, 9:30849 (BA;NL)
ECCS
See also HPCI
Evaluation
FRANTIC II: applications to standby safety systems, 9:30936 (R;US)
ECONOMIC DEVELOPMENT
Comparative Evaluations
Reflections on the 1973 oil crisis - economic aspects, 9:30239 (RA;CH;In German and French.)
ECONOMICS
Parametric Analysis
New techniques for adjusting reference factors, 9:31367 (R;US)
ECR HEATING
Effects of preionization by electron cyclotron heating in INTOR, 9:32300 (R;US)
Electron distribution function for electron-cyclotron heating in tokamaks, 9:32338 (TG;US)
Control Systems
Stand alone computer system to aid the development of Mirror Fusion Test Facility rf heating systems, 9:32377 (R;US)
Power Supplies
Startup experience with the MFTF-B ECRH 100 kV dc power supply, 9:32374 (R;US)
EDS LIQUEFACTION
See EXXON LIQUEFACTION PROCESS
EES
See ENERGY EXTENSION SERVICE
EFFLUENTS (GASEOUS)
See GASEOUS WASTES
EGGS
Radionuclide Kinetics
Concentration of orally administered and chronically fed /sup 95m/Tc in Japanese quail eggs, 9:31796 (J;GB)
EIGENVALUES
Comparative Evaluations
A comparison of maximum likelihood and other estimators of eigenvalues from several correlated Monte Carlo samples, 9:30805 (J;US)
Maximum-Likelihood Fit
A comparison of maximum likelihood and other estimators of eigenvalues from several correlated Monte Carlo samples, 9:30805 (J;US)
EINSTEIN FIELD EQUATIONS
Scalar Fields
Bianchi type-I models with conformally invariant scalar field, 9:32285 (R;BR)
EINSTEIN GRAVITATION THEORY
See GENERAL RELATIVITY THEORY
ELASTIC SCATTERING
See also COULOMB SCATTERING
POTENTIAL SCATTERING
Computer Codes
Heavy ion elastic scattering code : OPTHI, 9:32157 (R;IN)
ELECTRIC ARCS
Review of anode phenomena in vacuum arcs, 9:32312 (R;US)
ELECTRIC BATTERIES
Devices for production and/or storage of electrical energy from chemical reactions; excludes FUEL CELLS and RADIOISOTOPE BATTERIES.
See also LEAD-ACID BATTERIES
METAL-METAL OXIDE BATTERIES
METAL-NONMETAL BATTERIES
THERMAL BATTERIES
Battery Charging
Self regenerating storage battery, 9:30989 (P;US)
Design
Self regenerating storage battery, 9:30989 (P;US)
Energy Storage
Battery storage in residential applications of energy from photovoltaic sources, 9:30529 (J;GB)
Charge storage in doped poly(thiophene). Technical report, 9:30977 (R;US)
Performance
Nuclear power systems for spacecraft, 9:30988 (J;US)
Research Programs
Sandia storage battery program status, 9:30981 (R;US)
Technology base research project for electrochemical energy storage. Executive summary report for 1983, 9:30979 (R;US)
Test Facilities
Battery Energy Storage Test (BEST) Facility. Third progress report, review and summary through June 1983, 9:30978 (R;US)
Testing
Battery Energy Storage Test (BEST) Facility. Third progress report, review and summary through June 1983, 9:30978 (R;US)
ELECTRIC CABLES
See also SUPERCONDUCTING CABLES
Electrical Testing
Workshop proceedings: electrical testing of extruded-dielectric power transmission cables, 9:30686 (R;US)
Meetings
Workshop proceedings: electrical testing of extruded-dielectric power transmission cables, 9:30686 (R;US)
ELECTRIC CONDENSERS
See CAPACITORS
ELECTRIC CONTACTORS
See SWITCHES
ELECTRIC DISCHARGES

Charge Carriers
Production and loss of H^- in a hollow cathode discharge, 9:31922 (RA;AT)
Hydrogen Ions 1 Minus
Production and loss of H^- in a hollow cathode discharge, 9:31922 (RA;AT)
Zeeman Effect
Experimental studies of enhanced emittance by Zeeman splitting of a low-pressure mercury/argon discharge, 9:31091 (R;US)
ELECTRIC GENERATORS
Rotating generators only; excludes DIRECT ENERGY CONVERTERS.
See also ALTERNATORS
TURBOGENERATORS
Equivalent Circuits
Improvement in accuracy of prediction of electrical machine constants and generator models for subsynchronous resonance conditions. Volume 2. Application of two-dimensional finite-element techniques for synchronous machine modeling. Final report, 9:30646 (R;US)
Magnetic Fields
Improvement in accuracy of prediction of electrical machine constants and generator models for subsynchronous resonance conditions. Volume 1. Three-dimensional electromagnetic field analysis of electrical machinery. Final report, 9:30645 (R;US)
ELECTRIC MOTORS
Control Systems
Antagonistic control of dc motors: a theoretical and experimental study, 9:31372 (R;US)
Electric motors and controls for intelligent machines, 9:31371 (R;US)
Optimization
Choice of target data in optimum design of electrical motors, 9:31380 (R;US)
Optimum design of electric motor for multilink manipulator, 9:31375 (R;US)
Performance
EPRI research on power plant mechanical auxiliaries, 9:30702 (R;US)
ELECTRIC POWER
See also HYDROELECTRIC POWER
Fires
Annual report of the Electricity Inspectorate for 1982, 9:31429 (R;NO;In Norwegian)
Prices
Distributional and socioeconomic impacts of electricity price increases on the Puerto Rican population. Volume 2, 9:31724 (R;US)

State energy price and expenditure report, 1970-1981, 9:30242 (R;US)
Supply and Demand
Electric power utilization for the space heat market of households facilitating petroleum substitution, 9:31021 (R;DE;In German)
Electric power supply and demand for the contiguous United States 1984-1993. Staff report, 9:31031 (R;US)
ELECTRIC POWER RESEARCH INSTITUTE
See EPRI
ELECTRIC SWITCHES
See SWITCHES
ELECTRIC UTILITIES
Cogeneration
Market development for advanced coal-based cogeneration systems by the year 2000. Final report, 9:31016 (R;US)
Hydrogen Production
Market potential of electrolytic hydrogen production in three northeastern utilities' service territories. Final report, 9:30434 (R;US)
Inspection
Annual report of the Electricity Inspectorate for 1982, 9:31429 (R;NO;In Norwegian)
Interconnected Power Systems
Power pool in Norway. Annual report 1982, 9:30688 (R;NO;In Norwegian)
Investment
Modeling and valuation of utility investments. Final report, 9:31040 (R;US)
Legal Aspects
Solid Waste Disposal Act Amendments of 1980: the institutional and regulatory impact on the electric utility industry, 9:30224 (BA;US)
Load Analysis
Selected statistical methods for analysis of load research data. Final report, 9:31036 (R;US)
Load Management
Workshop proceedings: planning and assessment of load management, 9:31035 (R;US)
Planning
Modeling and valuation of utility investments. Final report, 9:31040 (R;US)
Research Programs
1983 survey of utility end-use projects. Final report, 9:31108 (R;US)
Site Selection
Patterns of outsiting by US electric utilities (Power plants located outside service areas), 9:31029 (R;US)
Solid Wastes
Solid Waste Disposal Act Amendments of 1980: the institutional and regulatory impact on the electric utility industry, 9:30224 (BA;US)
Time-of-Use Pricing
Industrial response to time-of-use rates: quantitative analysis of French, English and Welsh data. Final report, 9:31037 (R;US)
ELECTRICAL ENGINEERING
Electronics Engineering Department EE technical review, 9:31435 (R;US)
ELECTRICAL EQUIPMENT

ELECTRON DRIFT
Diffusion
Diffusion tensor in electron swarm transport, 9:32277 (RA;AT)
Lateral diffusion coefficient and velocity distribution function of electrons under electric field, 9:32278 (RA;AT)
Monte Carlo Method
Lateral diffusion coefficient and velocity distribution function of electrons under electric field, 9:32278 (RA;AT)
Tensors
Diffusion tensor in electron swarm transport, 9:32277 (RA;AT)
ELECTRON GAS
Structure Factors
Structure factor of a correlated nonuniform fermion gas at small wavelength, 9:32264 (J;US)
ELECTRON NEUTRINOS
Rest Mass
Neutrinoless double-beta decay in left-right symmetric models, 9:32026 (R;CA)
ELECTRON REACTIONS
Inelastic Scattering
Space parity nonconservation in excitation of nuclei in a process of electron bremsstrahlung, 9:32085 (RA;SU;In Russian)
P Invariance
Space parity nonconservation in excitation of nuclei in a process of electron bremsstrahlung, 9:32085 (RA;SU;In Russian)
ELECTRON SOURCES
Polarized Beams
Bates GaAs polarized electron source, 9:31503 (R;US)
Secondary Emission
Derivation of a dose mean value of lineal energy from variance measurements of a secondary electron emission current, 9:30799 (J;US)
ELECTRON-ATOM COLLISIONS
Cross Sections
High-Rydberg atom as a probe to low energy electron rare-gas collisions, 9:31914 (RA;AT)
Differential Cross Sections
Measurement of the triple differential cross section for the ionization of inner shells by relativistic electron impact, 9:31878 (R;DE ;In German)
Inner-Shell Ionization
Measurement of the triple differential cross section for the ionization of inner shells by relativistic electron impact, 9:31878 (R;DE ;In German)
ELECTRON-CAPTURE DETECTORS
Carrier Density
Calculation of current-voltage characteristics of electron-capture detectors, 9:31570 (RA;SU)
Electric Conductivity
Calculation of current-voltage characteristics of electron-capture detectors, 9:31570 (RA;SU)
Specifications
Characterization of coulometric and hypercoulometric ECD mode of operation, 9:31569 (RA;SU)
ELECTRONIC DATA PROCESSING
See DATA PROCESSING
ELECTRONIC EQUIPMENT

Bibliographies
Engineering materials: a bibliography, 9:31366 (R;US)
ENGLAND
See UNITED KINGDOM
ENVIRONMENTAL EXPOSURE PATHWAY
Evaluation
Methods for assessing the long term radiological consequences of radionuclide entry into groundwater, 9:31719 (R;GB)
Mathematical Models
Methods for assessing the long term radiological consequences of radionuclide entry into groundwater, 9:31719 (R;GB)
ENVIRONMENTAL IMPACTS
This descriptor is to be used to describe the possible effects on the environment from a proposed project.
Cost Benefit Analysis
Economic analysis of the environmental effects of a combustion-turbine generating station at Frederickson Industrial Park, Pierce County, Washington. Final report, 9:31725 (R;US)
Evaluation
Procedures for assessment of cumulative impacts of surface mining on the hydrologic balance, 9:30212 (R;US)
ENVIRONMENTAL POLICY
Decision Making
International cooperation in environmental decision making, 9:31682 (J;US)
Forests
Forrest diseases, 9:31809 (R;DE;In German)
Information
Forrest diseases, 9:31809 (R;DE;In German)
International Cooperation
International cooperation in environmental decision making, 9:31682 (J;US)
ENVIRONMENTAL PROTECTION AGENCY
See US EPA
ENVIRONMENTAL TRANSPORT

EQUILIBRIUM PLASMA
Electron Temperature
Electron temperature limit for poloidal equilibrium and tokamak containment scaling, 9:32334 (J;GB)
EQUIPMENT INTERFACES
Interfaces and buses, 9:31538 (RA;AT)
Design
FASTBUS simplex segment interconnect, 9:31579 (J;US)
The FASTBUS Cable Segment, 9:31444 (J;US)
Performance
The FASTBUS Cable Segment, 9:31444 (J;US)
Performance Testing
FASTBUS simplex segment interconnect, 9:31579 (J;US)
Specifications
A standard digital data busing system for use with nim modules, 9:31438 (J;US)
Standards
A standard digital data busing system for use with nim modules, 9:31438 (J;US)
I/O channel interface, 9:32417 (R;US)
Technology Assessment
Status of the IEEE P896 Future Backplane Bus, 9:31437 (J;US)
ERBIUM
Chemical Reactions
Interaction of thin erbium films with aluminum, 9:30440 (R;US)
Electron Collisions
Electronic structure on metal surfaces by electron energy loss spectroscopy, 9:31885 (RA;AT)
Electronic Structure
Electronic structure on metal surfaces by electron energy loss spectroscopy, 9:31885 (RA;AT)
Surface Properties
Electronic structure on metal surfaces by electron energy loss spectroscopy, 9:31885 (RA;AT)
ERBIUM 150
Beta-Plus Decay
Favoured β-transitions πhsub(11/2)->vhsub(9/2), 9:32127 (RA;DE;In German)
ERBIUM 164
Gyromagnetic Ratio
Approximate angular momentum projection for strongly deformed nuclei, 9:32128 (RA;DE)
Moment of Inertia
Approximate angular momentum projection for strongly deformed nuclei, 9:32128 (RA;DE)
ERBIUM COMPOUNDS
See also ERBIUM HYDRIDES
Moessbauer Effect
^{57}Fe Moessbauer study in the ternary hydrides of $ErFe_2$, 9:31156 (RA;BR)

Spin Orientation
Spin-reorientation in (Er sub(1-x) Gd sub(x))Fe_2 compounds, 9:31157 (RA;BR)

ERBIUM HYDRIDES
Chemical Reactions
Interaction of thin erbium films with aluminum, 9:30440 (R;US)
Hyperfine Structure
Hyperfine interactions in the $ErFe_2$ H sub(2.7) hydride, 9:31251 (RA;BR)

EROSION
Control
Construction cost and erosion control effectiveness of filter windrows on fill slopes. Forest Service research note, 9:31695 (R;US)
Mathematical Models
Application of an agricultural water balance and erosion model in environmental science: a user perspective, 9:30343 (R;US)

ESTERS
Includes esters of organic and inorganic acids.
See also POLYESTERS
Gelation
Observation of gelation process in two dimensions, 9:31244 (J;US)
Shear Properties
Observation of gelation process in two dimensions, 9:31244 (J;US)
Viscosity
Observation of gelation process in two dimensions, 9:31244 (J;US)

ESTUARINE ECOSYSTEMS
See AQUATIC ECOSYSTEMS

ETA MESONS
Particle Production
Inclusive eta meson production by positive hadrons with the momentum of 10.5 GeV/c, 9:31984 (R;SU;In Russian)

ETA-549
See ETA MESONS

ETHANE
Charged-Particle Transport
Examination of the density dependence of the slowing-down cross section of liquid ethane for ^{7}Li-projectiles, 9:32241 (R;DE;In German)
Deuteration
Electron transport in liquids: effect of unbalancing the methane molecule by deuteration, 9:31321 (RA;AT)
Hydrogenation
Characterization of Ru zeolite catalysts by a hydrogenolysis test reaction network, 9:31320 (RA;US)
Isotope Effects
Electron transport in liquids: effect of unbalancing the methane molecule by deuteration, 9:31321 (RA;AT)

1,2-ETHANEDIOL
See GLYCOLS

ETHANOL
Production
Effect of cellobiose, glucose, ethanol, and metal ions on the cellulase enzyme complex of Thermomonospora fusca, 9:30485 (J;US)

ETHANOL FUELS
Use for pure ethanol, ethanol-water mixtures, or ethanol with additives; for ethanol-gasoline mixtures, use GASOHOL.
Production
Economic feasibility of small-scale ethanol production in Texas, 9:30482 (R;US)

ETHERS
Chemical Bonds
Quantitation of the reductive cleavage of aryl ethers of SRC and coals. Final report, September 1980-March 1984 , 9:31319 (R;US)
Reduction
Quantitation of the reductive cleavage of aryl ethers of SRC and coals. Final report, September 1980-March 1984 , 9:31319 (R;US)

ETHINE
See ACETYLENE

ETHOCEL
See CELLULOSE
ETHERS

ETHYL ALCOHOL
See ETHANOL

ETHYLENE
Atom-Molecule Collisions
Temperature dependence of the de-excitation rate constants of excited rare gas atoms by atoms and molecules, 9:31949 (RA;AT)
Infrared Spectra
Systematic GVB study of harmonic vibrational frequencies and dipole moment derivatives: The vinyl radical C_2H_3 and other simple molecules, 9:31969 (J;US)
Molecular Structure
Systematic GVB study of harmonic vibrational frequencies and dipole moment derivatives: The vinyl radical C_2H_3 and other simple molecules, 9:31969 (J;US)
Removal
Effect of feed gas trace components on the SRC-I hydrogen purification unit. Final technical report, 9:30133 (R;US)

ETHYLENE GLYCOL
See GLYCOLS

ETHYLENE POLYMERS
See POLYETHYLENES

ETHYNE

EXXON LIQUEFACTION PROCESS
Residues
Type I evaluation of Exxon Donor Solvent (EDS) liquefaction process residue from Texas lignite as a feedstock for the Texaco Gasification Process, 9:30103 (R;US)
EYE CATARACTS
See CATARACTS

F

F CENTERS
Recombination
H-centers conversion into I-centers in alkali iodides, 9:31260 (RA;SU;In Russian)
FABRIC FILTERS
Cleaning
Influence of cleaning conditions on outlet dust concentration of a pulse jet fabric filter, 9:30666 (RA;US)
Study of sonic cleaning for enhanced baghouse performance, 9:30671 (RA;US)
Use of sonic air horns as an assist to reverse air cleaning of a fabric filter dust collector, 9:30679 (RA;US)
Coatings
Processing and end-use performance of finished glass fabrics for filtration, 9:30660 (RA;US)
Design
Fluid dynamic guidelines for fabric filter design, 9:30667 (RA;US)
Fluid dynamic considerations in the design of a fabric filter system, 9:30680 (RA;US)
Present status of bag filters at Pennsylvania Power & Light Company, 9:30678 (RA;US)
Economics
Economics of fabric filters and electrostatic precipitators, 1983, 9:30655 (RA;US)
Fluid dynamic considerations in the design of a fabric filter system, 9:30680 (RA;US)
Efficiency
Influence of cleaning conditions on outlet dust concentration of a pulse jet fabric filter, 9:30666 (RA;US)
Fabrication
Fabric and finish selection, manufacturing techniques and other factors affecting bag life in the coal fired boiler application, 9:30657 (RA;US)
Manufacture of glass-fiber yarns, 9:30656 (RA;US)
Field Tests
Performance evaluation of several full-scale utility baghouses, 9:30676 (RA;US)
Maintenance
Operation and maintenance experience on the EPRI 10 MW high sulfur coal pilot baghouse at Plant Scholz, 9:30673 (RA;US)
Present status of bag filters at Pennsylvania Power & Light Company, 9:30678 (RA;US)
Materials
Fabric evaluation program at Coyote Unit No. 1 operating results update, 9:30659 (RA;US)
Optimization
Filter bag construction design considerations for optimized performance, 9:30658 (RA;US)
Performance
Analysis and interpretation of fabric filter performance, 9:30672 (RA;US)
Filter bag construction design considerations for optimized performance, 9:30658 (RA;US)
High ratio fabric filter operating experience on utility coal fired boilers, 9:30669 (RA;US)
Operating experience in Australia with fabric filters on power boilers, 9:30677 (RA;US)
Operation and maintenance experience on the EPRI 10 MW high sulfur coal pilot baghouse at Plant Scholz, 9:30673 (RA;US)
Performance evaluation of reverse-gas baghouses on coal-fired utility boilers, 9:30670 (RA;US)
Performance of a 10 MW baghouse collecting fly ash from a high-sulfur coal-fired boiler, 9:30674 (RA;US)
Performance evaluation of several full-scale utility baghouses, 9:30676 (RA;US)
Present status of bag filters at Pennsylvania Power & Light Company, 9:30678 (RA;US)
Study of sonic cleaning for enhanced baghouse performance, 9:30671 (RA;US)

Pilot Plants
Japanese technical development of bag houses for coal fired utility boilers, 9:30675 (RA;US)
Research Programs
Fabric filter research at Southwestern Public Service Company, 9:30682 (RA;US)

Proceedings of the DOE contractors' conference on indirect liquefaction, 9:30443 (R;US)
Site activities of zeolite-support Ru for CO hydrogenation. Final report, 9:30457 (R;US)
Syngas conversion to gasoline range hydrocarbons using metal-zeolite catalysts, 9:30445 (RA;US)
Usefulness of a slurry-type Fischer-Tropsch reactor for processing synthesis gas of low hydrogen-carbon monoxide ratios, 9:30451 (RA;US)

Chemical Reactors
Catalyst and reactor development for a slurry-phase Fischer-Tropsch process, 9:30449 (RA;US)
Fischer-Tropsch synthesis from a low H_2:CO gas in a dry fluidized-bed system. Technical progress report, July 1, 1983-April 30, 1984, 9:30464 (R;US)
Proceedings of the DOE contractors' conference on indirect liquefaction, 9:30443 (R;US)
Usefulness of a slurry-type Fischer-Tropsch reactor for processing synthesis gas of low hydrogen-carbon monoxide ratios, 9:30451 (RA;US)

Comparative Evaluations
Mathematically modeled comparison of Fischer-Tropsch reactor systems, 9:30448 (RA;US)

Energy Conservation
Synthetic fuel production using Texas lignite and a very high temperature reactor for process heat, 9:30748 (J;US)

Energy Substitution Equivalent
Synthetic fuel production using Texas lignite and a very high temperature reactor for process heat, 9:30748 (J;US)

Experimental Data
Development of catalytic systems for the conversion of syngas to jet fuel and diesel fuel and higher alcohols, 9:30101 (RA;US)

Mathematical Models
Mathematically modeled comparison of Fischer-Tropsch reactor systems, 9:30448 (RA;US)

Meetings
Proceedings of the DOE contractors' conference on indirect liquefaction, 9:30443 (R;US)

On-Line Measurement Systems
Comparison of iron Fischer-Tropsch catalysts using on-line gas chromatography, 9:30444 (RA;US)

Performance Testing
Syngas conversion to gasoline range hydrocarbons using metal-zeolite catalysts, 9:30445 (RA;US)

Reaction Kinetics
Fischer-Tropsch synthesis in slurry reactor systems. Quarterly report, November 1, 1983-January 31, 1984, 9:30456 (R;US)

FISCHER-TROPSCH

MOBIL PROCESS/Catalysts
Two-stage process for conversion of synthesis gas to high quality transportation fuels. Quarterly report, 1 October-31 December 1983, 9:30465 (R;US)

MOBIL PROCESS/Chemical Reactors
Two-stage slurry Fischer-Tropsch ZSM-5 process of converting syngas to high octane gasoline, 9:30452 (RA;US)
Two-stage process for conversion of synthesis gas to high quality transportation fuels. Quarterly report, 1 October-31 December 1983, 9:30465 (R;US)

MOBIL PPOCESS/Flowsheets
Two-stage slurry Fischer-Tropsch ZSM-5 process of converting syngas to high octane gasoline, 9:30452 (RA;US)

MOBIL PROCESS/Mathematical Models
Two-stage slurry Fischer-Tropsch ZSM-5 process of converting syngas to high octane gasoline, 9:30452 (RA;US)

MOBIL PROCESS/Pilot Plants
Two-stage process for conversion of synthesis gas to high quality transportation fuels. Quarterly report, 1 October-31 December 1983, 9:30465 (R;US)

FISHES
See also TROUT

Behavior
Avoidance responses of estuarine fish subjected to heated chlorinated and dechlorinated power plant effluents, 9:31813 (R;US)

FISSILE MATERIALS

Safety Standards
Proposed ANS standard 8.14: Subcritical limits of fissile materials with neutron absorbers for criticality control, Part 1, 9:30798 (J;US)

Subcriticality
Proposed ANS standard 8.14: Subcritical limits of fissile materials with neutron absorbers for criticality control, Part 1, 9:30798 (J;US)

FISSION

Collective Model
Collective mass and zero-point energy in the generator-coordinate method, 9:32184 (R;DE;In German)
Macroscopic equation of motion including quantum mechanical and non-Markoff processes, 9:32178 (RA;DE;In German)

Kinetics
Fission dynamics simplified, 9:32175 (RA;DE)
Propagation of a fissioning system across the barrier towards scission, 9:32176 (RA;DE)
Use of a transport equation for the dynamical behaviour of the nuclear fission, 9:32177 (RA;DE)

Nuclear Models
Dynamics of fission and heavy ion reactions, 9:32227 (R;US)

Pairing Interactions
Odd-even effects in the nuclear fission, 9:32183 (R;DE;In German)

FISSION BARRIER

Liquid Drop Model
Fission barriers of compressed nuclei, 9:32138 (RA;DE)

Nuclear Matter
Fission barriers of compressed nuclei, 9:32138 (RA;DE)

FISSION FRAGMENTS

Energy Spectra
New calculation of prompt fission neutron spectra and average prompt neutron multiplicities, 9:30801 (J;US)

FISSION NEUTRONS
See also DELAYED NEUTRONS
PROMPT NEUTRONS

Multiplicity
Neutron multiplicities of ^{252}Cf and the fissile nuclei. Final report, 9:32146 (R;US)

FISSION PRODUCT RELEASE
Coordinate with descriptors for the area of release such as BIOSPHERE or COOLANTS, and for the specific fission products, if known.
Mechanistic prediction of iodine and cesium release from LWR fuel, 9:30856 (R;US)

FISSION PRODUCTS

Adsorption
Chemical aspects governing the choice of backfill materials for nuclear waste repositories, 9:30367 (J;US)

Chemisorption
Chemical aspects governing the choice of backfill materials for nuclear waste repositories, 9:30367 (J;US)

Corrosive Effects
Fission product Pd-SiC interaction in irradiated coated-particle fuels, 9:30746 (J;US)

FISSIONABLE MATERIALS MANAGEMENT
See NUCLEAR MATERIALS MANAGEMENT

FISSURED FORMATIONS
See FRACTURED RESERVOIRS

FLAT PLATE COLLECTORS

Construction
City of Macon, Missouri solar energy project. Final report, 9:30554 (R;US)

Heat Transfer
Theoretical and experimental characterization of a flat-plate air solar collector, 9:30564 (R;FR;In French)

Performance
Operational demonstration of a field of high performance flat plate collectors with isothermal heat transport, 9:30563 (R;DE;In German)
Performance Testing
Solar collector testing program. Part 1: efficiency and exposure tests. Final report, 9:30565 (R;US)
Solar collector testing program. Part II: all-day efficiency tests. Final report, 9:30566 (R;US)
Snow
Prevention of excess snow accumulation due to roof mounted solar collectors, 9:30559 (R;CA)
Static Loads
Prevention of excess snow accumulation due to roof mounted solar collectors, 9:30559 (R;CA)
Thermal Efficiency
Theoretical and experimental characterization of a flat-plate air solar collector, 9:30564 (R;FR;In French)

FLAVOR MODEL
Unified Gauge Models
Flavor-color-hypercolor unification based on SO(10) /SUB V/ x SO(10) /SUB H/ , 9:32039 (BA;US)

FLAVORDYNAMICS
See QUANTUM FLAVORDYNAMICS

FLOTATION
Reagents
Preparation of super-clean coal. Technical progress report for first and second quarters, September 15, 1983-March 14, 1984, 9:30214 (R;US)

FLOW (HEAT)
See HEAT FLOW

FLOW MODELS
Algorithms
Efficient finite-difference calculation procedure for multi-dimensional fluid flows, 9:31415 (R;US)
Finite Difference Method
Efficient finite-difference calculation procedure for multi-dimensional fluid flows, 9:31415 (R;US)

FLOW RATE
Measuring Instruments
Development of drag disk and turbines at the INEL, 9:30846 (R;US)
Measuring Methods
Experiences in ultrasonic correlation flow measuring technique, 9:31414 (R;IN)

FLOWMETERS
Uses
Application of a thermocouple-correlation-type transit-time flowmeter in a pressurized water reactor environment, 9:30869 (R;US)

FLUE GAS
Cleaning
Laboratory/bench scale testing and evaluation of APT dry plate scrubber. Seventeenth quarterly report, March 1-May 31, 1984, 9:30170 (R;US)
Denitrification
Evaluation of the NOXSO combined NO/sub x//SO_2 flue gas treatment process: process chemistry, reaction kinetics, sorbent performance, process design and cost analysis. Final report, 9:30171 (R;US)
Desulfurization
22 MW coal-fired demonstration of dry SO_2 scrubbing with sodium sorbent compounds, 9:30662 (RA;US)
Construction and operation of a pilot plant for further development of the LR-process, 9:30267 (R;DE;In German)
Economics of dry Flue Gas Desulfurization (FGD) by sorbent injection, 9:30663 (RA;US)
EPRI spray dryer/baghouse pilot plant status and results, 9:30664 (RA;US)
Evaluation of the NOXSO combined NO/sub x//SO_2 flue gas treatment process: process chemistry, reaction kinetics, sorbent performance, process design and cost analysis. Final report, 9:30171 (R;US)
Hot gas desulphurization of combustion gases and reduction gases, 9:30174 (R;DE;In German)
Investigations on the wet collection of sulphur dioxide, 9:30175 (R;DE;In German)
Maintenance and reliability of utility flue-gas desulfurization: projections vs. experience, 9:31468 (J;US)
Modelling and assessment of advanced processes for integrated environmental control of coal-fired power plants. Technical progress report, 9:30652 (R;US)
Heat Recovery
New thermal waste heat purification system: operating criteria and the four main constructional features, 9:31092 (R;DE;In German)
Purification
New thermal waste heat purification system: operating criteria and the four main constructional features, 9:31092 (R;DE;In German)

FLUIDIZED-BED COMBUSTION
Mathematical Models
Modeling of pressurized fluidized bed combustion of coal. Volume I. PFBC system model development. Final report, 9:30216 (R;US)

FLUIDIZED-BED COMBUSTORS
Air Pollution Control
Laboratory/bench scale testing and evaluation of APT dry plate scrubber. Seventeenth quarterly report, March 1-May 31, 1984, 9:30170 (R;US)
Corrosion
Corrosion in atmospheric fluidized bed combustors--the reactions of $CaSO_4$ with Cr, Ni, Co, Fe, and several alloys, 9:31214 (J;US)
Filters
Hot-gas filtration for pressurized fluidized-bed combustion, 9:31456 (R;US)
Hot Gas Cleanup
Hot-gas filtration for pressurized fluidized-bed combustion, 9:31456 (R;US)
Testing
Test Series 2.2: Detailed Test Plan, 9:31454 (R;US)

FLUIDS
Not for BODY FLUIDS.
See also GASES
GEOTHERMAL FLUIDS
LIQUIDS
Mechanical Properties
Shear viscosity of the hard-sphere fluid via nonequilibrium molecular dynamics, 9:32261 (J;US)

FLUORESCENCE
Transport Theory
Effect of fluorescence, bremsstrahlung, and annihilation radiation on the spectra and energy deposition of gamma rays in bulk media, 9:30802 (J;US)

FLUORINE
Electron Drift
Calculation of electron swarm parameters in electro-negative gases - SF_6, H_2O and F_2 -, 9:31911 (RA;JP)
Muonic Molecules
Application of the muonium spin rotation technique to a study of the gas phase chemical kinetics of muonium reaction with the halogens and hydrogen halides, 9:31873 (R;CA)
Photochemical Reactions
Excitation spectrum of the chemical reaction F_2+O_2 in the red spectral range, 9:31329 (J;US)

FLUORINE 19
Chemical Shift
Trifluoromethanesulfonyl chloride for identification of oxygen, nitrogen, and sulfur functional groups by fluorine-19 nuclear magnetic resonance spectrometry, 9:31305 (J;US)
Isotope Effects
Trifluoromethanesulfonyl chloride for identification of oxygen, nitrogen, and sulfur functional groups by fluorine-19 nuclear magnetic resonance spectrometry, 9:31305 (J;US)

FLUORINE FLUORIDES
See FLUORINE

FLY ASH
Animals
Interim report on the genetic and animal toxicity testing of SRC-I products, intermediates, and waste materials, 9:30123 (R;US)

Chemical Composition
Fly ash characteristics relevant to utilization, health precautions and environment considerations, 9:30168 (BA;US)
Leaching
Description of a standard leaching procedure for coal residues and waste materials, 9:30178 (R;NL;In Dutch)
Mutagen Screening
Interim report on the genetic and animal toxicity testing of SRC-I products, intermediates, and waste materials. Appendix A, Volume 3. Microbial mutagenicity evaluations (Ames Test) Option IB reports, 9:30125 (R;US)
Natural Radioactivity
Relative radiation hazards of coal based and nuclear power plants. Final report for the period 1 December 1980 - 14 February 1983, 9:30182 (R;AT)
Sampling
Identification of VO_2i in particles from the flue lines of oil-fired power plants, 9:31667 (J;US)
Interim report on the genetic and animal toxicity testing of SRC-I products, intermediates, and waste materials. Appendix G. Sample history and documentation, 9:30131 (R;US)
Sintering
Recovery of alumina from fly ash: use of coal cleaning refuse as a mineralizer in the lime-sinter process, 9:30173 (R;US)
Surface Properties
Fly ash characteristics relevant to utilization, health precautions and environment considerations, 9:30168 (BA;US)
Toxicity
Interim report on the genetic and animal toxicity testing of SRC-I products, intermediates, and waste materials, 9:30123 (R;US)
Waste Management
DOE program in coal waste management, 9:30176 (BA;US)
Waste Product Utilization
Elemental partitioning in ash depositories and material balances for a coal burning facility by spark source mass spectrometry, 9:30167 (J;US)

FOCK METHOD
See HARTREE-FOCK METHOD

FOCK SELF-CONSISTENT FIELD
See HARTREE-FOCK METHOD

FOKKER-PLANCK COEFFICIENTS
See FOKKER-PLANCK EQUATION

FOKKER-PLANCK EQUATION
Analytical Solution
Solution of the relativistic 2-D Fokker-Planck equation for LH current drive, 9:32306 (R;US)

FOLLICLE STIMULATING HORMONE
See FSH

FOOD INDUSTRY
See also DAIRY INDUSTRY
MEAT INDUSTRY
Waste Product Utilization
Utilization of apple press waste to replace fossil fuel to generate process steam, 9:31101 (BA;US)

FOOD IRRADIATION
See FOOD PROCESSING

FOOD PROCESSING
Waste Water
Caustic dry peeling of cling peaches to reduce water pollution: its economic feasibility. Agricultural economic report, 9:31711 (R;US)

FORMALDEHYDE
Pollution Sources
Formaldehyde: an important indoor pollutant, 9:31651 (R;US)

FORMALIN

FOSSIL-FUEL POWER PLANTS
Air Pollution
Emission inventory of coal, peat and oil-fired power plants, 9:31665 (R;FI;In Finnish)
SO_2 (G) to sulfate conversion rate in an oil-fired power plant plume in a fog bank, 9:31670 (J;US)
Air Pollution Control
Modelling and assessment of advanced processes for integrated environmental control of coal-fired power plants. Technical progress report, 9:30651 (R;US)
Modelling and assessment of advanced processes for integrated environmental control of coal-fired power plants. Technical progress report, 9:30652 (R;US)
Availability
Boiler tube failures: The Number One availability problem for utilities, 9:30613 (RA;US)
Coal-fired plants project retirement plan. Supplement (Data for 11 TVA plants as a function of age; no text), 9:30650 (R;US)
Blowers
EPRI research on power plant mechanical auxiliaries, 9:30702 (R;US)
Coal
Modelling and assessment of advanced processes for integrated environmental control of coal-fired power plants. Technical progress report, 9:30652 (R;US)
Cocombustion
Don't bury it - burn it (an advanced concept of utilizing municipal waste), 9:31122 (BA;US)
Computerized Simulation
Modelling and assessment of advanced processes for integrated environmental control of coal-fired power plants. Technical progress report, 9:30652 (R;US)
Cost
Environmental impacts of dispersed and concentrated siting of coal-fired power plants. Final report, 9:30683 (R;US)
Economic Impact
Economic analysis of the environmental effects of a combustion-turbine generating station at Frederickson Industrial Park, Pierce County, Washington. Final report, 9:31725 (R;US)
Economics
Economics of coal-fired and nuclear power generation in Alberta, 9:30757 (RA;CA)
Electric Motors
EPRI research on power plant mechanical auxiliaries, 9:30702 (R;US)
Environmental Impacts
Economic analysis of the environmental effects of a combustion-turbine generating station at Frederickson Industrial Park, Pierce County, Washington. Final report, 9:31725 (R;US)
Environmental impacts of dispersed and concentrated siting of coal-fired power plants. Final report, 9:30683 (R;US)
Flue Gas
Modelling and assessment of advanced processes for integrated environmental control of coal-fired power plants. Technical progress report, 9:30652 (R;US)
Heaters
EPRI research on power plant mechanical auxiliaries, 9:30702 (R;US)
Legal Aspects
Solid Waste Disposal Act Amendments of 1980: the institutional and regulatory impact on the electric utility industry, 9:30224 (BA;US)
Maintenance
Coal-fired plants project retirement plan. Supplement (Data for 11 TVA plants as a function of age; no text), 9:30650 (R;US)
Meetings
Failures and inspections of fossil-fired boiler tubes: 1983 conference and workshop, 9:30612 (R;US)
Operating Cost
Coal-fired plants project retirement plan. Supplement (Data for 11 TVA plants as a function of age; no text), 9:30650 (R;US)
Plumes
SO_2 (G) to sulfate conversion rate in an oil-fired power plant plume in a fog bank, 9:31670 (J;US)

Pollution Control Equipment
1983 update, operating history and current status of fabric filters in the utility industry, 9:30654 (RA;US)
22 MW coal-fired demonstration of dry SO_2 scrubbing with sodium sorbent compounds, 9:30662 (RA;US)
Analysis and interpretation of fabric filter performance, 9:30672 (RA;US)
Baghouse design and operating considerations at North Valmy Unit One, 9:30681 (RA;US)
Economics of fabric filters and electrostatic precipitators, 1983, 9:30655 (RA;US)
Economics of dry Flue Gas Desulfurization (FGD) by sorbent injection, 9:30663 (RA;US)
EPRI spray dryer/baghouse pilot plant status and results, 9:30664 (RA;US)
Fabric and finish selection, manufacturing techniques and other factors affecting bag life in the coal fired boiler application, 9:30657 (RA;US)
Fabric evaluation program at Coyote Unit No. 1 operating results update, 9:30659 (RA;US)
Fabric filtration in Japan, 9:30668 (RA;US)
Fabric filter research at Southwestern Public Service Company, 9:30682 (RA;US)
Filter bag construction design considerations for optimized performance, 9:30658 (RA;US)
Filter fabric concepts in Europe for coal-fired boiler applications, 9:30661 (RA;US)
Fluid dynamic guidelines for fabric filter design, 9:30667 (RA;US)
Fluid dynamic considerations in the design of a fabric filter system, 9:30680 (RA;US)
High ratio fabric filter operating experience on utility coal fired boilers, 9:30669 (RA;US)
Influence of cleaning conditions on outlet dust concentration of a pulse jet fabric filter, 9:30666 (RA;US)
Japanese technical development of bag houses for coal fired utility boilers, 9:30675 (RA;US)
Manufacture of glass-fiber yarns, 9:30656 (RA;US)
Operating experience in Australia with fabric filters on power boilers, 9:30677 (RA;US)
Operation and maintenance experience on the EPRI 10 MW high sulfur coal pilot baghouse at Plant Scholz, 9:30673 (RA;US)
Performance evaluation of reverse-gas baghouses on coal-fired utility boilers, 9:30670 (RA;US)
Performance of a 10 MW baghouse collecting fly ash from a high-sulfur coal-fired boiler, 9:30674 (RA;US)
Performance evaluation of several full-scale utility baghouses, 9:30676 (RA;US)
Present status of bag filters at Pennsylvania Power & Light Company, 9:30678 (RA;US)
Proceedings: second conference on fabric filter technology for coal-fired power plants, 9:30653 (R;US)
Processing and end-use performance of finished glass fabrics for filtration, 9:30660 (RA;US)
Review of EPA fabric filtration research and development, 9:30665 (RA;US)
Study of sonic cleaning for enhanced baghouse performance, 9:30671 (RA;US)
Use of sonic air horns as an assist to reverse air cleaning of a fabric filter dust collector, 9:30679 (RA;US)
Pumps
EPRI research on power plant mechanical auxiliaries, 9:30702 (R;US)
Site Selection
Environmental impacts of dispersed and concentrated siting of coal-fired power plants. Final report, 9:30683 (R;US)
Social Impact
Environmental impacts of dispersed and concentrated siting of coal-fired power plants. Final report, 9:30683 (R;US)
Solid Wastes
Solid Waste Disposal Act Amendments of 1980: the institutional and regulatory impact on the electric utility industry, 9:30224 (BA;US)
Steam Systems
Proceedings: workshop on corrosion product sampling from hot water systems, 9:30693 (R;US)
Sampling for corrosion products in high pressure fossil-fuel boilers: a literature survey, 9:30690 (RA;US)
Sampling of corrosion products in Baltimore Gas and Electric Company fossil stations, 9:30647 (RA;US)
Sampling water by membrane filtration for suspended solids in steam generating systems, 9:30689 (RA;US)
Steam Turbines
Augmented heat transfer rates in utility condensers. Final report, 9:31416 (R;US)
Valves
EPRI research on power plant mechanical auxiliaries, 9:30702 (R;US)
Waste Disposal
Development of a computer model to estimate waste disposal costs, 9:30177 (BA;US)
FOUR-BODY PROBLEM
Glauber Theory
Main features of the four nucleon interactions at medium energies and Glauber sum rules, 9:32073 (RA;HU)

FUEL CANS
Creep
High temperature postirradiation materials performance of spent pressurized water reactor fuel rods under dry storage conditions, 9:30741 (J;US)
Flow Blockage
Influence of partial blockage of a BWR bundle on heat transfer, cladding temperature, and quenching during bottom flooding or top spraying under simulated LOCA conditions, 9:30709 (J;US)
Fracture Properties
High temperature postirradiation materials performance of spent pressurized water reactor fuel rods under dry storage conditions, 9:30741 (J;US)
Fuel-Cladding Interactions
An analytical study of azimuthal temperature distribution in pressurized water reactor fuel rods under steady-state and blowdown conditions, 9:30963 (J;US)
High temperature postirradiation materials performance of spent pressurized water reactor fuel rods under dry storage conditions, 9:30741 (J;US)
Influence of partial blockage of a BWR bundle on heat transfer, cladding temperature, and quenching during bottom flooding or top spraying under simulated LOCA conditions, 9:30709 (J;US)
Heat Transfer
Influence of partial blockage of a BWR bundle on heat transfer, cladding temperature, and quenching during bottom flooding or top spraying under simulated LOCA conditions, 9:30709 (J;US)
Post-Irradiation Examination
High temperature postirradiation materials performance of spent pressurized water reactor fuel rods under dry storage conditions, 9:30741 (J;US)
Strains
High temperature postirradiation materials performance of spent pressurized water reactor fuel rods under dry storage conditions, 9:30741 (J;US)
Swelling
Influence of partial blockage of a BWR bundle on heat transfer, cladding temperature, and quenching during bottom flooding or top spraying under simulated LOCA conditions, 9:30709 (J;US)
Temperature Distribution
An analytical study of azimuthal temperature distribution in pressurized water reactor fuel rods under steady-state and blowdown conditions, 9:30963 (J;US)
Temperature Gradients
An analytical study of azimuthal temperature distribution in pressurized water reactor fuel rods under steady-state and blowdown conditions, 9:30963 (J;US)
FUEL CELL POWER PLANTS
For commercial, residential, or electric utility use.
Cogeneration
Fuel cell cogeneration using anaerobic digester gas, 9:31050 (J;US)
Design
Fuel cell cogeneration using anaerobic digester gas, 9:31050 (J;US)
Marketing Research

CAT Scanning
Water reactor fuel characterization. Part of a coordinated programme on non-destructive techniques for reactor fuel characterization. Final report for the period 15 November 1979 - 15 June 1983, 9:30818 (R;AT)
Emission Computed Tomography
Water reactor fuel characterization. Part of a coordinated programme on non-destructive techniques for reactor fuel characterization. Final report for the period 15 November 1979 - 15 June 1983, 9:30818 (R;AT)
Flow Blockage
Influence of partial blockage of a BWR bundle on heat transfer, cladding temperature, and quenching during bottom flooding or top spraying under simulated LOCA conditions, 9:30709 (J;US)
Fuel Cans
Influence of partial blockage of a BWR bundle on heat transfer, cladding temperature, and quenching during bottom flooding or top spraying under simulated LOCA conditions, 9:30709 (J;US)
Fuel-Cladding Interactions
Influence of partial blockage of a BWR bundle on heat transfer, cladding temperature, and quenching during bottom flooding or top spraying under simulated LOCA conditions, 9:30709 (J;US)

Heat Transfer
Evaluation of the SLSF P2 loss-of-flow safety experiment, 9:30965 (J;US)
Influence of partial blockage of a BWR bundle on heat transfer, cladding temperature, and quenching during bottom flooding or top spraying under simulated LOCA conditions, 9:30709 (J;US)
Hydraulics
Evaluation of the SLSF P2 loss-of-flow safety experiment, 9:30965 (J;US)

FUEL ELEMENTS
See also FUEL PINS
FUEL RODS
FUEL SPHERES
SPENT FUEL ELEMENTS
Nondestructive Testing
Radiation evaluation techniques and facilities used for quality assurance of fuel elements and fuel assemblies for nuclear power plants, 9:30821 (RA;SU)
Quality Assurance
Radiation evaluation techniques and facilities used for quality assurance of fuel elements and fuel assemblies for nuclear power plants, 9:30821 (RA;SU)

FUEL FABRICATION PLANTS

Regulatory Guides
Standard model for safety analysis report of fuel fabrication plants, 9:30317 (R;BR;In Portuguese)
Safety
Standard model for safety analysis report of fuel fabrication plants, 9:30317 (R;BR;In Portuguese)

FUEL GAS
See also NATURAL GAS
Chemical Composition
Type I evaluation of Exxon Donor Solvent (EDS) liquefaction process residue from Texas lignite as a feedstock for the Texaco Gasification Process, 9:30103 (R;US)

FUEL INJECTION SYSTEMS
Design
High pressure tokamak fuel injector. Phase II. Final report, December 1977-December 1979, 9:32362 (R;US)
Fabrication
High pressure tokamak fuel injector. Phase II. Final report, December 1977-December 1979, 9:32362 (R;US)

FUEL LOADING
See REACTOR FUELING

FUEL OILS
Fuel Substitution
Combustion of alternate liquid fuels in high efficiency boilers, 9:31459 (J;US)
Mutagen Screening
Interim report on the genetic and animal toxicity testing of SRC-I products, intermediates, and waste materials. Appendix A, Volume 3. Microbial mutagenicity evaluations (Ames Test) Option IB reports, 9:30125 (R;US)
Toxicity
Interim report on the genetic and animal toxicity testing of SRC-I products, intermediates, and waste materials. Appendix D. Acute animal studies reports, 9:30128 (R;US)
Waste Product Utilization
Combustion of alternate liquid fuels in high efficiency boilers, 9:31459 (J;US)

FUEL PELLETS
Degassing
Hot vacuum outgassing to ensure low hydrogen content in MOX fuel pellets for thermal reactors, 9:30289 (R;IN)
Dimensions
Cost and other effects of reduced fuel pellet diameters, 9:30739 (J;US)
Fabrication
Investigation of the ammonium-uranyl-carbonate route for the production of sintered UO_2 pellets, 9:30291 (RA;IL)
Sizing
Cost and other effects of reduced fuel pellet diameters, 9:30739 (J;US)

FUEL PENCILS
See FUEL PINS

FUEL PINS
Chemical Reactions
Fuel chemistry impact on vented fuel pin design, 9:30778 (J;US)
Failure Mode Analysis
Combination of fuel-cladding chemical and mechanical interactions in mixed oxide fuel pins, 9:30779 (J;US)
Fission Product Release
Fuel chemistry impact on vented fuel pin design, 9:30778 (J;US)
Measurement of thermal power density distributions by fuel pin gamma scanning, 9:30747 (J;US)
Fuel Element Failure
Combination of fuel-cladding chemical and mechanical interactions in mixed oxide fuel pins, 9:30779 (J;US)
Mol-7B-an 18-pin bundle operating 200 days beyond breach, 9:30776 (J;US)
Fuel-Cladding Interactions
Combination of fuel-cladding chemical and mechanical interactions in mixed oxide fuel pins, 9:30779 (J;US)
Mol-7B-an 18-pin bundle operating 200 days beyond breach, 9:30776 (J;US)
Gamma Fuel Scanning
Measurement of thermal power density distributions by fuel pin gamma scanning, 9:30747 (J;US)
Irradiation
Combination of fuel-cladding chemical and mechanical interactions in mixed oxide fuel pins, 9:30779 (J;US)
Post-Irradiation Examination
Combination of fuel-cladding chemical and mechanical interactions in mixed oxide fuel pins, 9:30779 (J;US)
Measurement of thermal power density distributions by fuel pin gamma scanning, 9:30747 (J;US)
Mol-7B-an 18-pin bundle operating 200 days beyond breach, 9:30776 (J;US)
Power Density
Measurement of thermal power density distributions by fuel pin gamma scanning, 9:30747 (J;US)
Testing
EBR-II transient operation and test capabilities, 9:30849 (BA;NL)
Transients
EBR-II transient operation and test capabilities, 9:30849 (BA;NL)

FUEL POOLS
The behavior of a B_4C-phenolic and a glass-fiber-reinforced B_4C-phenolic composite in a spent nuclear fuel storage pool, 9:30311 (J;US)

FUEL RACKS
Cutting
Sectioning of contaminated materials and electrochemical decontamination, 9:30331 (RA;US)
Decontamination
Sectioning of contaminated materials and electrochemical decontamination, 9:30331 (RA;US)

FUEL REPROCESSING
See REPROCESSING

FUEL REPROCESSING PLANTS
See also COGEMA LA HAGUE
IDAHO CHEMICAL PROCESSING PLANT
Control Systems
State-of-the-art Model M-2 Maintenance System, 9:30293 (R;US)
Maintenance
State-of-the-art Model M-2 Maintenance System, 9:30293 (R;US)
Nuclear Materials Management
Automation of plutonium spectrophotometry, 9:30413 (TJ;US)
Determination of plutonium content by differential attenuation of two gamma rays, 9:30412 (TJ;US)
Nuclear materials control in irradiated fuel reprocessing, 9:30394 (R;US)
On-line plutonium measurement by alpha counting using a glass sensor, 9:30411 (TJ;US)

Plutonium determination by spectrophotometry of plutonium. VI. Control of the nuclear fuel reprocessing plant, 9:30409 (TJ;US)
Plutonium determination by isotope dilution, 9:30410 (TJ;US)
Off-Gas Systems
Adequacy of radioiodine control and monitoring at nuclear fuels reprocessing plants, 9:30350 (R;US)
On-Line Measurement Systems
Continuous α-measurement in the process solutions of a reprocessing plant. Comparison of two commercial devices, 9:30299 (TJ;US)
Regulatory Guides
Standard model for safety analysis report of fuel reprocessing plants, 9:30388 (R;BR;In Portuguese)
Remote Handling Equipment
State-of-the-art Model M-2 Maintenance System, 9:30293 (R;US)
Safety
Standard model for safety analysis report of fuel reprocessing plants, 9:30388 (R;BR;In Portuguese)

FUEL RODS
Computerized Simulation
Modeling of carbide fuel rods, 9:30772 (J;US)
Energy Absorption
Resonance absorption in high-temperature gas-cooled reactor fuel with double heterogeneity, 9:30753 (J;US)
Fuel-Cladding Interactions
An analytical study of azimuthal temperature distribution in pressurized water reactor fuel rods under steady-state and blowdown conditions, 9:30963 (J;US)
High temperature postirradiation materials performance of spent pressurized water reactor fuel rods under dry storage conditions, 9:30741 (J;US)
Heterogeneous Effects
Resonance absorption in high-temperature gas-cooled reactor fuel with double heterogeneity, 9:30753 (J;US)
Meetings
IAEA specialists' meeting on power ramping and cycling behaviour of water reactor fuel. Summary report, 9:30820 (R;AT)
Specialists' meeting on internal fuel rod chemistry, 9:30819 (R;AT)
Post-Irradiation Examination
High temperature postirradiation materials performance of spent pressurized water reactor fuel rods under dry storage conditions, 9:30741 (J;US)
Temperature Distribution
An analytical study of azimuthal temperature distribution in pressurized water reactor fuel rods under steady-state and blowdown conditions, 9:30963 (J;US)

FUEL SHEATHS

G

GABBROS
Geochemistry
Influence of a metamorphosed gabbro in the control of uranium-bearing pegmatite dykes, Madawaska Mines, Bancroft, Ontario, 9:31828 (RA;CA)

GADOLINIUM
Electron Collisions
Electronic structure on metal surfaces by electron energy loss spectroscopy, 9:31885 (RA;AT)
Surface Properties
Electronic structure on metal surfaces by electron energy loss spectroscopy, 9:31885 (RA;AT)
GADOLINIUM 156 TARGET
Titanium 48 Reactions
Evaporation decay and associated gamma multiplicity for ^{204}Rn via three fusion channels, 9:32144 (J;US)
GADOLINIUM COMPOUNDS
Diffusion
Limit diffusion coefficients and hydration (numbers) of some trivalent actinide and lanthanide ions, 9:31358 (RA;IL)
Hydration
Limit diffusion coefficients and hydration (numbers) of some trivalent actinide and lanthanide ions, 9:31358 (RA;IL)
Spin Orientation
Spin-reorientation in (Er sub(1-x) Gd sub(x))Fe$_3$ compounds, 9:31157 (RA;BR)
GAGES (PRESSURE)
See PRESSURE GAGES
GALAXY CLUSTERS
Correlation Functions
Galaxy N-point correlation functions: Theoretical amplitudes for arbitrary N, 9:31867 (J;US)
Voids
Galaxy N-point correlation functions: Theoretical amplitudes for arbitrary N, 9:31867 (J;US)
GALAXY NUCLEI
Central part of galaxies.
Thermonuclear Reactions
Three-dimensional model for fusion processes, 9:31862 (R;US)
GALLIUM
Activation Analysis
Autoradiography of gallium in silicon, 9:31299 (RA;SU)
Autoradiography
Autoradiography of gallium in silicon, 9:31299 (RA;SU)
Gamma Spectroscopy
Autoradiography of gallium in silicon, 9:31299 (RA;SU)
Lattice Parameters
Diffusion couple studies in the U-Ga and Th-Ga systems, 9:31188 (RA;IL)
Material Balance
Elemental partitioning in ash depositories and material balances for a coal burning facility by spark source mass spectrometry, 9:30167 (J;US)
GALLIUM ARSENIDE SOLAR CELLS
Physical Radiation Effects
Neutron damage effects in AlGaAs/GaAs solar cells (Summary only), 9:30514 (R;US)
GALLIUM ARSENIDES
Absorption Spectra
Photothermal spectroscopy and imaging of GaAs, 9:31265 (R;US)
Aging
BP-stabilized n-Si and n-GaAs photoanodes, 9:30520 (J;US)
Photoacoustic Spectroscopy
Photothermal spectroscopy and imaging of GaAs, 9:31265 (R;US)
Photoemission
Bates GaAs polarized electron source, 9:31503 (R;US)
Structural Chemical Analysis
Photothermal spectroscopy and imaging of GaAs, 9:31265 (R;US)
GAMMA DETECTION
Radiation Monitors
Gamma-ray detectors for intelligent, hand-held radiation monitors, 9:31586 (J;US)
Shower Counters
Operational performance of a large liquid argon photon calorimeter, 9:31601 (J;NL)
GAMMA DOSIMETRY
Mathematical Models
Energy absorption in cylinders containing an off-axis linear source, 9:32258 (J;GB)
GAMMA FUEL SCANNING
Accuracy
Measurement of thermal power density distributions by fuel pin gamma scanning, 9:30747 (J;US)
GAMMA RADIATION
Buildup
Effect of fluorescence, bremsstrahlung, and annihilation radiation on the spectra and energy deposition of gamma rays in bulk media, 9:30802 (J;US)
Dose-Response Relationships
Alpha-particle irradiations of C3H/10T1/2, 9:31756 (RA;US)
Gamma Spectra
Effect of fluorescence, bremsstrahlung, and annihilation radiation on the spectra and energy deposition of gamma rays in bulk media, 9:30802 (J;US)
Transport Theory
Effect of fluorescence, bremsstrahlung, and annihilation radiation on the spectra and energy deposition of gamma rays in bulk media, 9:30802 (J;US)
GAMMA RADIOGRAPHY
See also GAMMA FUEL SCANNING
Radiation Protection Laws
Radiation safety program for portable defectoscopes in industrial buildings, 9:30418 (RA;SU)
GAMMA SPECTRA
Data Analysis
Portable microcomputer for the analysis of plutonium gamma-ray spectra. Volume I. Data analysis methodology and hardware description, 9:31295 (R;US)
Portable microcomputer for the analysis of plutonium gamma-ray spectra. Volume II. Software description and listings, 9:31296 (R;US)
Data Processing
Computation software for processing gamma-spectra being obtained in application of detectors, 9:31282 (RA;SU;In Russian)
GAMMA SPECTROMETERS
See also MOESSBAUER SPECTROMETERS
Data Acquisition Systems
Design of automated nuclear data systems for industrial application, 9:31537 (RA;AT)
GAMMA SPECTROSCOPY
Computer Codes
MARY: a computer code for the analysis of γ-rays following compound inelastic scattering of neutrons in experiments using close neutron source-to-scatterer geometry, 9:32067 (R;US)
GAMMA-RAY LASERS
See GASERS
GARNETS
For silicate garnets only.
Microstructure
Effect of crystallization of grain boundary phase on the high temperature strength of silicon nitride ceramics. Final report, April 1, 1980-March 31, 1984 (Sialon-YAG; Sialon-cordierite), 9:31224 (R;US)
GAS BURSTS
See ROCK BURSTS
GAS CENTRIFUGATION
Nuclear Materials Diversion
Risk assessment of alternative proliferation routes, 9:30406 (J;US)
GAS CENTRIFUGES
Flow Models
Flow in a tapered centrifuge , 9:30287 (R;US)
GAS COMPRESSORS
Maintenance
H-Coal Pilot Plant. Volume VI. 4.0 - equipment performance: 4.12 - pressure safety valves, 4.13 - instrumentation, 4.14 - process piping systems, 4.15 - hydrogen compressors. Final report, 9:30109 (R;US)
Performance Testing
H-Coal Pilot Plant. Volume VI. 4.0 - equipment performance: 4.12 - pressure safety valves, 4.13 - instrumentation, 4.14 - process piping systems, 4.15 - hydrogen compressors. Final report, 9:30109 (R;US)

GAS COOLANTS

Purification
Deep level impurities in germanium and silicon: low temperature passivation or removal techniques, 9:31575 (J;US)
Hp Ge: Purification, crystal growth, and annealing properties, 9:31574 (J;US)
Radioactivity
Induced radioactivities in silicon and germanium irradiated with high-energy heavy ions, 9:31573 (J;US)
GERMANIUM ALLOYS
Magnetoresistance
Inhomogeneity effects in the magnetoresistance measurements in thin mixture films of In-Ge, 9:31176 (RA;IL)
GERMANIUM DETECTORS
See GE SEMICONDUCTOR DETECTORS
GERMANY (DEMOCRATIC REPUBLIC)
See GERMAN DEMOCRATIC REPUBLIC
GERMANY (FEDERAL REPUBLIC)
See FEDERAL REPUBLIC OF GERMANY
GERMS (MICROORGANISMS)
See MICROORGANISMS
GIANT RESONANCE
Deformed Nuclei
New collective states in deformed nuclei, 9:32129 (RA;DE;In German)
Rotational States
Giant dipole resonance in hot rotating nuclei, 9:32161 (RA;DE)
Rotating giant dipole mode, 9:32163 (RA;DE;In German)
Semiclassical Approximation
Semi-classical description of giant resonances in rotating nuclei, 9:32174 (RA;DE;In German)
GLASS
See also BOROSILICATE GLASS
Corrosion
Application of glass corrosion concepts to nuclear waste immobilization, 9:30379 (J;US)
Crushing
Single point diamond crushing of glass, 9:31369 (R;US)
Dissolution
Mechanisms that control aqueous leaching of nuclear waste glass, 9:30377 (J;US)
Fluid Flow
Interaction of flow and phase separation: kinetics, structure, rheology, 9:31267 (R;US)
Intratracheal Administration
Tritium distribution and excretion following intratracheal instillation of glass microballoon fragments in rats, 9:31795 (J;GB)
Leaching
Continuous-flow leaching studies of crushed and cored SYNROC, 9:30372 (J;US)
Leach testing of Idaho Chemical Processing Plant final waste forms, 9:30378 (J;US)
Mechanisms that control aqueous leaching of nuclear waste glass, 9:30377 (J;US)
Microstructure
Effect of crystallization of grain boundary phase on the high temperature strength of silicon nitride ceramics. Final report, April 1, 1980-March 31, 1984 (Sialon-YAG; Sialon-cordierite), 9:31224 (R;US)
Phase Studies
Interaction of flow and phase separation: kinetics, structure, rheology, 9:31267 (R;US)
Rheology
Interaction of flow and phase separation: kinetics, structure, rheology, 9:31267 (R;US)
Sputtering
Low dose sputtering experiments, 9:31891 (RA;AT)
Stress Corrosion
Stress corrosion of a high-transmittance glass for solar applications, 9:30570 (J;US)
Stress Intensity Factors
Stress corrosion of a high-transmittance glass for solar applications, 9:30570 (J;US)
Waste-Rock Interactions
Application of glass corrosion concepts to nuclear waste immobilization, 9:30379 (J;US)
GLASS SCINTILLATORS
Fastbus System
Brookhaven FASTBUS ADC'S, 9:31521 (J;US)
Performance
Brookhaven FASTBUS ADC'S, 9:31521 (J;US)
GLUCOSE
Biological Effects
Effect of glucose and other sugars on the β-1,4-glucosidase activity of Thermomonospora fusca, 9:30486 (J;US)
GLUCOSIDASE
Inhibition
Effect of glucose and other sugars on the β-1,4-glucosidase activity of Thermomonospora fusca, 9:30486 (J;US)
GLUEBALLS
Glueballs and beyond, 9:32013 (R;US)
Particle Production
Glueball production in the valon-recombination model, 9:32033 (R;CA)
GLUONIUM
See GLUEBALLS
GLYCOLS
Corrosion
Corrosion of iron, aluminum and copper-base alloys in glycols under simulated solar collector conditions, 9:30572 (J;US)
Corrosion Resistance
Corrosion of iron, aluminum and copper-base alloys in glycols under simulated solar collector conditions, 9:30572 (J;US)
Corrosive Effects
Corrosion of iron, aluminum and copper-base alloys in glycols under simulated solar collector conditions, 9:30572 (J;US)
GOBAR GAS
See METHANE
GODIVA REACTOR
Beta Dosimetry
Beta- and gamma-dose measurements of the Godiva IV Critical Assembly, 9:32257 (J;GB)
Gamma Dosimetry
Beta- and gamma-dose measurements of the Godiva IV Critical Assembly, 9:32257 (J;GB)
GOLD
Deposition
Gold-mask technique for fabricating segmented-electrode germanium detectors, 9:31572 (J;US)
Solvent Extraction
Use of technical mixtures of carboxylic acids to the extraction of silver, 9:31301 (RA;SU)
GOLD 197 TARGET
Neon 20 Reactions
Study of the reaction mechanisms in the system $^{20}Ne + {}^{197}Au$ at projectile energies between 7.5 and 20 MeV/u, 9:32139 (R;DE;In German)
GOLD ORES
Quantitative Chemical Analysis
Mineralogical investigation of a refractory gold ore, and of a sulphide concentrate and calcined tailing from that ore, 9:31291 (R;ZA)
GOLD SILICIDES
Antiferromagnetism
Magnetic ordering in CeM_2Si_2 (M = Ag,Au,Pd,Rh) compounds as studied by neutron diffraction, 9:31272 (J;US)
GRADED BAND GAP SOLAR CELLS
See CASCADE SOLAR CELLS
GRAIN ALCOHOL
See ETHANOL
GRAND UNIFIED THEORY
Supersymmetry
Towards a realistic SUGRA-GUT, 9:32054 (R;GB)
GRANITES
See also PEGMATITES
'Hot' granites. Some general remarks, 9:30281 (RA;CA)
Correlations
Some relationships between granitic plutons and the distribution of uranium deposits, 9:31841 (RA;CA)
Geochemistry
Geochemistry and geology of some uraniferous granites in Labrador, 9:31856 (RA;CA)

Influence of a metamorphosed gabbro in the control of uranium-bearing pegmatite dykes, Madawaska Mines, Bancroft, Ontario, 9:31828 (RA;CA)
Geologic Models
Uranium mineralization and lithogeochemistry of the Surprise Lake batholith, Atlin, British Columbia, 9:31855 (RA;CA)
Mineralization
Geochemistry of granitoid plutons of Cape Breton Island, Nova Scotia, 9:31847 (RA;CA)
Signatures of metalliferous granites in the British Isles, 9:31842 (RA;CA)
Petrochemistry
Airborne radiometric anomalies caused by late kinematic granite rocks in the Molson Lake-Red Sucker Lake area, east-central Manitoba, 9:31839 (RA;CA)
Anomally '60': a uraniferous granitic pluton on Melville Peninsula, N.W.T., 9:31853 (RA;CA)
Characteristics of the Okanagan highlands intrusive complex as a source for basalt-type uranium deposits, south-central British Columbia, 9:31838 (RA;CA)
Geochemistry of granitoid plutons of Cape Breton Island, Nova Scotia, 9:31847 (RA;CA)
Mineralogical and petrochemical properties of heterogeneous granitoid rocks from radioactive occurrences in the Grenville structural province, Ontario and Quebec, 9:31844 (RA;CA)
Petrochemistry of the Blanchford Lake complex near Yellowknife, Northwest Territories, 9:31849 (RA;CA)
Radiometric study of three radioactive granites in the Canadian Shield: Elliot Lake, Ontario; Fort Smith, and Fury and Hecla, N.W.T., 9:31851 (RA;CA)
Uraniferous granitoid rocks from the Superior province of Northwestern Ontario, 9:31848 (RA;CA)
Uraniferous granites and associated mineralization in the Fury and Hecla Strain area, Baffin Island, N.W.T., 9:31852 (RA;CA)
Uranium mineralization and lithogeochemistry of the Surprise Lake batholith, Atlin, British Columbia, 9:31855 (RA;CA)

GRAPHITE
Ion Collisions
Compton profiles in solids by inelastic ion-electron scattering, 9:31882 (RA;DE;In German)
Nitrates
Orientation of HNO_3 molecules in highly oriented pyrolytic graphite-nitrates and in the corresponding residue compounds, 9:31253 (RA;IL)
Nitric Acid
Orientation of HNO_3 molecules in highly oriented pyrolytic graphite-nitrates and in the corresponding residue compounds, 9:31253 (RA;IL)
Pyrolytic Carbon
Orientation of HNO_3 molecules in highly oriented pyrolytic graphite-nitrates and in the corresponding residue compounds, 9:31253 (RA;IL)

GRAPHITE MODERATOR
See GRAPHITE

GRASERS
See GASERS

GRASS
Sampling
Field and greenhouse experiments on the fate of technetium in plants and soil, 9:31693 (J;GB)

GRATINGS
Optics
Calculation of the useful width of a system of two concave gratings mounted at grazing incidence, 9:31635 (TJ;US)

GRAVIMELT PROCESS
Bench-Scale Experiments
Bench-scale development of the TRW process for cleaning coal (Gravimelt Process). Quarterly technical progress report, February 1984-May 1984, 9:30142 (R;US)
Chemical Reactors
Bench-scale development of the TRW process for cleaning coal (Gravimelt Process). Quarterly technical progress report, February 1984-May 1984, 9:30142 (R;US)

GRAVITATION
Field Equations
Translation-limit of a Poincare gauge theory of gravity, 9:32289 (R;AT)

GRAVITATIONAL FIELDS
Gauge Invariance
Gravitation as Gauge theory of Poincare Group, 9:32045 (R;BR;In Portuguese)

GRAVITONS
Pair Production
Radiative detection of spin 3/2 particles in e^+e^- interactions, 9:32015 (R;SU)

GRAVITY SURVEYS
Maps
Complete Bouguer Gravity Anomaly Map, Cascade Mountains, Washington, 9:30578 (R;US)

GREAT BRITAIN
See UNITED KINGDOM

GREEN FUNCTION
Mathematical Operators
Binary operators and their Green's functions, 9:30803 (J;US)

GREENHOUSES
Construction
Passive solar greenhouse, middle earth farms. Final report, 9:30552 (R;US)
Energy Consumption
Gasification of indigenous fuels and the use of gas at commercial greenhouses, 9:31098 (R;FI;In Finnish)
Performance
Passive solar greenhouse, middle earth farms. Final report, 9:30552 (R;US)

GROSS-NEVEU MODEL
See LAGRANGIAN FIELD THEORY

GROSSWELZHEIM HDR REACTOR
See HDR REACTOR

GROUND WATER
Flow Models
First status report on regional ground-water flow modeling for the Paradox Basin, Utah, 9:30312 (R;US)
Radionuclide Migration
Behavior of plutonium and americium in two groundwater systems, 9:31718 (RA;US)
Methods for assessing the long term radiological consequences of radionuclide entry into groundwater, 9:31719 (R;GB)
NNWSI preliminary radiological monitoring plan for the environment, 9:30358 (R;US)
NRC nuclear waste geochemistry 1983, 9:30345 (R;US)
Water Chemistry
Geochemistry of ground water in the Miocene Oakville Sandstone: a major aquifer and uranium host of the Texas Coastal Plain, 9:31708 (R;US)
Water Pollution Control
Groundwater pollution control, 9:31707 (R;US)

GROUND-WATER RESERVES
See AQUIFERS

GROWTH HORMONE
See STH

GULF OF MEXICO
Baseline Ecology
Turtles, birds, and mammals in the northern Gulf of Mexico and nearby Atlantic waters: an overview based on aerial surveys of OCS (Outer Continental Shelf) areas, with emphasis on oil and gas effects, 9:31701 (R;US)

H

H CENTERS
Recombination
H-centers conversion into I-centers in alkali iodides, 9:31260 (RA;SU;In Russian)

HADRON REACTIONS
Energy Transfer
Formation of local moving source and energy deposition in hadron-nucleus reactions, 9:32203 (RA;HU)
HADRONS
See also MESONS
Multiple Production
Average multiplicities in deep inelastic processes and their interpretation, 9:32014 (R;SU)
Multiplicity
Multiplicity distributions of protons with intermediate energies and of fast charged particles emitted in interactions of π-mesons and protons with atomic nuclei in 1.6-10.5 GeV energy range, 9:32124 (R;XJ;In Russian)
HAFNIUM 174
Mass Spectra
Precise atomic masses and mass differences for Hf, Ta, W and Re, 9:31872 (R;CA)
HALL EFFECT
Quantization
Gauge argument for accurate quantization of the Hall conductance, 9:32284 (R;US)
HANDLING (DATA)
See DATA PROCESSING
HANDLING (WASTES)
See WASTE MANAGEMENT
HANFORD PRODUCTION REACTORS
Reactor Decommissioning
Assessment of decommissioning alternatives for the shut-down Hanford 100 Area reactors. A Hanford production reactor decommissioning study, 9:30853 (R;US)
Reactor Dismantling
Assessment of decommissioning alternatives for the shut-down Hanford 100 Area reactors. A Hanford production reactor decommissioning study, 9:30853 (R;US)
HANFORD RESERVATION
Radioactive Waste Disposal
Basalt as a potential waste package backfill component in a repository located within the Columbia River basalt, 9:30366 (J;US)
HARD COAL
See BLACK COAL
HARMONIC OSCILLATORS
Quantum Mechanics
Configuration of minimum energy for a deformed oscillator, 9:32270 (RA;DE;In German)
HARTREE APPROXIMATION
See HARTREE-FOCK METHOD
HARTREE-FOCK METHOD
Time dependent Hartree-Fock theory: special applications, 9:32125 (R;US)
HARTREE-FOCK-BOGOLYUBOV THEORY
Backbending
Super-backbending, 9:32164 (RA;DE;In German)
Fluctuations
Approximate angular momentum projection for strongly deformed nuclei, 9:32128 (RA;DE)
Rotational States
HFB+nQP-method for the description of the rotational bands of deformed nuclei, 9:32158 (R;DE ;In German)
HAULAGE EQUIPMENT
See also CONVEYORS
Diesel Engines
Methods of reducing exhaust emissions from diesel engines and improving safety, 9:30197 (RA;US)
Safety and productivity of mining equipment with diesel engines, 9:30192 (RA;US)
HAZARDOUS MATERIALS
Not for radioactive materials.
Combustion
Chemical waste as fuel for cement kilns, 9:31100 (BA;US)
Combustion Products
Sampling and analysis methods for hazardous waste combustion. Final report, 9:31660 (R;US)
Underground Disposal
Disposal of hazardous elemental wastes, 9:31466 (J;US)
HCDA
See REACTOR CORE DISRUPTION
H-COAL PROCESS
Bibliographies
H-Coal Pilot Plant. Volume I. 1.0 - executive summary and general project description, 2.0 - general reference section. Final report (Contains titles and abstracts of 42 topical reports and titles of relevant reports issued by associated organizations (Chevron, Conoco, EPRI, HRI, Mobil, and ORNL)), 9:30104 (R;US)
Chemical Reactors
H-Coal Pilot Plant. Volume III. 4.0 - equipment performance: 4.1 - test program, 4.2 - slurry pumps, 4.3 - H-Coal reactor, 4.4 - heaters. Final report, 9:30106 (R;US)
Chemical Spills
H-Coal Pilot Plant. Volume VIII. 6.0 - environmental, 7.0 - health and safety. Final report, 9:30111 (R;US)
Coal Liquids
H-Coal pilot plant. Final report. Volumes IX and X, 9:30112 (R;US)
Computerized Control Systems
H-Coal pilot plant. Final report. Volumes IX and X, 9:30112 (R;US)
Cyclone Separators
H-Coal Pilot Plant. Volume V. 4.0 - equipment performance: 4.9 - solids separation, 4.10 - block valves, 4.11 - control valves. Final report, 9:30108 (R;US)
Data Acquisition Systems
H-Coal pilot plant. Final report. Volumes IX and X, 9:30112 (R;US)
Data Base Management
H-Coal pilot plant. Final report. Volumes IX and X, 9:30112 (R;US)
Distillation Equipment
H-Coal Pilot Plant. Volume IV. 4.0 - equipment performance: 4.5 - heat exchangers, 4.6 - towers, 4.7 - storage tanks, 4.8 - drums and separators. Final report, 9:30107 (R;US)
Emission
Industrial hygiene monitoring of gaseous, liquid and particulate matter releases at the Catlettsburg, Kentucky H-coal facility: results and evaluation, 9:30150 (R;US)
Environmental Effects
H-Coal Pilot Plant. Volume VIII. 6.0 - environmental, 7.0 - health and safety. Final report, 9:30111 (R;US)
Equipment
H-Coal Pilot Plant. Volume I. 1.0 - executive summary and general project description, 2.0 - general reference section. Final report (Contains titles and abstracts of 42 topical reports and titles of relevant reports issued by associated organizations (Chevron, Conoco, EPRI, HRI, Mobil, and ORNL)), 9:30104 (R;US)
Failure Mode Analysis
H-Coal pilot plant. Final report. Volumes IX and X, 9:30112 (R;US)
Gas Compressors
H-Coal Pilot Plant. Volume VI. 4.0 - equipment performance: 4.12 - pressure safety valves, 4.13 - instrumentation, 4.14 - process piping systems, 4.15 - hydrogen compressors. Final report, 9:30109 (R;US)
Health Hazards
H-Coal Pilot Plant. Volume VIII. 6.0 - environmental, 7.0 - health and safety. Final report, 9:30111 (R;US)
Heat Exchangers
H-Coal Pilot Plant. Volume IV. 4.0 - equipment performance: 4.5 - heat exchangers, 4.6 - towers, 4.7 - storage tanks, 4.8 - drums and separators. Final report, 9:30107 (R;US)
Heaters
H-Coal Pilot Plant. Volume III. 4.0 - equipment performance: 4.1 - test program, 4.2 - slurry pumps, 4.3 - H-Coal reactor, 4.4 - heaters. Final report, 9:30106 (R;US)
Industrial Medicine
H-Coal Pilot Plant. Volume VIII. 6.0 - environmental, 7.0 - health and safety. Final report, 9:30111 (R;US)
Industrial hygiene monitoring of gaseous, liquid and particulate matter releases at the Catlettsburg, Kentucky H-coal facility: results and evaluation, 9:30150 (R;US)

Inventions
H-Coal pilot plant. Final report. Volumes IX and X, 9:30112 (R;US)
Laboratories
H-Coal pilot plant. Final report. Volumes IX and X, 9:30112 (R;US)
Materials
H-Coal pilot plant. Final report. Volume VII. Materials evaluation, 9:30110 (R;US)
Materials Testing
H-Coal pilot plant. Final report. Volume VII. Materials evaluation, 9:30110 (R;US)
Measuring Instruments
H-Coal Pilot Plant. Volume VI. 4.0 - equipment performance: 4.12 - pressure safety valves, 4.13 - instrumentation, 4.14 - process piping systems, 4.15 - hydrogen compressors. Final report, 9:30109 (R;US)
Permit Applications
H-Coal Pilot Plant. Volume VIII. 6.0 - environmental, 7.0 - health and safety. Final report, 9:30111 (R;US)
Pilot Plants
H-Coal Pilot Plant. Volume I. 1.0 - executive summary and general project description, 2.0 - general reference section. Final report (Contains titles and abstracts of 42 topical reports and titles of relevant reports issued by associated organizations (Chevron, Conoco, EPRI, HRI, Mobil, and ORNL)), 9:30104 (R;US)
H-Coal Pilot Plant. Volume II. 3.0 - pilot plant operations. Final report (Detailed account of operations), 9:30105 (R;US)
H-Coal Pilot Plant. Volume VIII. 6.0 - environmental, 7.0 - health and safety. Final report, 9:30111 (R;US)
Pipes
H-Coal Pilot Plant. Volume VI. 4.0 - equipment performance: 4.12 - pressure safety valves, 4.13 - instrumentation, 4.14 - process piping systems, 4.15 - hydrogen compressors. Final report, 9:30109 (R;US)
Protective Clothing
H-Coal Pilot Plant. Volume VIII. 6.0 - environmental, 7.0 - health and safety. Final report, 9:30111 (R;US)
Pumps
H-Coal Pilot Plant. Volume III. 4.0 - equipment performance: 4.1 - test program, 4.2 - slurry pumps, 4.3 - H-Coal reactor, 4.4 - heaters. Final report, 9:30106 (R;US)
Quality Assurance
H-Coal pilot plant. Final report. Volumes IX and X, 9:30112 (R;US)
Refractories
H-Coal pilot plant. Final report. Volume VII. Materials evaluation, 9:30110 (R;US)
Scrubbers
H-Coal Pilot Plant. Volume IV. 4.0 - equipment performance: 4.5 - heat exchangers, 4.6 - towers, 4.7 - storage tanks, 4.8 - drums and separators. Final report, 9:30107 (R;US)
Tanks
H-Coal Pilot Plant. Volume IV. 4.0 - equipment performance: 4.5 - heat exchangers, 4.6 - towers, 4.7 - storage tanks, 4.8 - drums and separators. Final report, 9:30107 (R;US)
Valves
H-Coal Pilot Plant. Volume V. 4.0 - equipment performance: 4.9 - solids separation, 4.10 - block valves, 4.11 - control valves. Final report, 9:30108 (R;US)
H-Coal Pilot Plant. Volume VI. 4.0 - equipment performance: 4.12 - pressure safety valves, 4.13 - instrumentation, 4.14 - process piping systems, 4.15 - hydrogen compressors. Final report, 9:30109 (R;US)
Waste Water
H-Coal Pilot Plant. Volume VIII. 6.0 - environmental, 7.0 - health and safety. Final report, 9:30111 (R;US)

Hydrodynamic Model
Flow analysis of nuclear collisions - probing the properties of dense nuclear matter, 9:32100 (RA;HU)
Quantum effects in heavy ion collisions process, 9:32200 (RA;HU)
Scaling properties of heavy ion reactions in the hydrodynamical model, 9:32212 (RA;HU)
Search for flow in the reaction Ar+Pb, 9:32140 (RA;HU)
Hydrodynamics
Scaling behaviour in a hydrodynamical description of heavy ion reactions, 9:32181 (RA;DE;In German)
Inclusive Interactions
Experimental review of high-energy nucleus-nucleus collisions, 9:32211 (RA;HU)
Mass dependence of the inclusive proton cross section for nucleus-nucleus collisions of high energies, 9:32180 (RA;DE;In German)
Scaling behaviour in a hydrodynamical description of heavy ion reactions, 9:32181 (RA;DE;In German)
Inelastic Scattering
Baryon distribution in relativistic heavy-ion collisions, 9:32232 (J;US)
Nuclear Matter
Relativistic nuclear fluiddynamics coupled to classical meson fields, 9:32193 (RA;HU)
Nuclear Models
Relativistic heavy ion cascade model, 9:32216 (RA;HU)
Nuclear Reaction Kinetics
4PI data of relativistic nuclear collisions, 9:32111 (RA;HU)
Dynamics of relativistic nuclear collisions, 9:32214 (RA;HU)
Dynamics of fission and heavy ion reactions, 9:32227 (R;US)
Pion absorption compared to effects of compression in relativistic nucleus-nucleus collisions, 9:32179 (RA;DE;In German)
Time dependent Hartree-Fock theory: special applications, 9:32125 (R;US)
Particle Production
Λ and Ksub(s)sup(o) production in central nucleus-nucleus interactions at 4.5 GeV/c momentum per nucleon, 9:32114 (RA;HU)
Calculations of meson production for relativistic heavy ion reactions using hadrochemical and cascade models, 9:32218 (RA;HU)
Production of pions in relativistic nucleus-nucleus collisions, 9:32220 (RA;HU)
Strange particle production in the heavy-ion collision and the chemical equilibrium, 9:32215 (RA;HU)

Subthreshold pion production in nucleus-nucleus collisions, 9:32202 (RA;HU)
Quantum Mechanics
Quantum effects in heavy ion collisions process, 9:32200 (RA;HU)
Quark Matter
Dynamical model of quark gluon plasma formation and disintegration, 9:32195 (RA;HU)
Quark-gluon plasma: a new state of matter, 9:32197 (RA;HU)
Scaling Laws
Scaling properties of heavy ion reactions in the hydrodynamical model, 9:32212 (RA;HU)
Solitons
Soliton type solutions in nuclear hydrodynamics, 9:32226 (R;SU;In Russian)
Spallation
Aspects of data on the breakup of highly excited nuclei, 9:32208 (RA;HU)
Aspects of light fragment emission in high-energy nucleus-nucleus collisions, 9:32219 (RA;HU)
Statistical Models
Exclusive observables from a statistical simulation of energetic nuclear collisions, 9:32217 (RA;HU)
Two-Nucleon Transfer Reactions
Investigating the pairing phase transition in rapidly rotating deformed nuclei with heavy ion two-nucleon transfer reaction, 9:32173 (RA;DE)

HEAVY ION SPECTROMETERS
Ionization Chambers
Using MUSIC to study relativistic nuclear collisions, 9:31507 (RA;HU)

HEAVY IONS
Whenever possible use one of the more specific terms listed under ION BEAMS.
Space Charge
Intense non-relativistic cesium ion beam, 9:32361 (R;US)

HEAVY NUCLEI
For nuclei from mass 181 upwards.
See also ACTINIDE NUCLEI
LEAD 208
LEAD 210
PLATINUM 197
POLONIUM 210
RADIUM 226
RADON 204
RADON 220
RADON 222
TANTALUM 181
THALLIUM 205
TUNGSTEN 181
Fission
New calculation of prompt fission neutron spectra and average prompt neutron multiplicities, 9:30801 (J;US)
Nuclear Reactions
Multifragmentation of big nuclei, 9:32209 (RA;HU)

HEAVY OILS
See PETROLEUM

HEAVY WATER
Cross Sections
Transport of thermal neutrons in D_2O in the temperature Range 5 to 60°C based on a new scattering kernel, 9:30808 (J;US)

HEAVY WATER COOLANT
See HEAVY WATER

HEAVY WATER MODERATED REACTORS
See also CANDU TYPE REACTORS
JRR-3 REACTOR
PRTR REACTOR
SGHWR REACTOR
WR-1 REACTOR
Reactor Kinetics Equations
Multidimensional space-time kinetics of a heavy water moderated nuclear reactor, 9:30760 (J;US)
Reactor Safety Experiments
Multidimensional space-time kinetics of a heavy water moderated nuclear reactor, 9:30760 (J;US)
Rod Drop Accidents
Multidimensional space-time kinetics of a heavy water moderated nuclear reactor, 9:30760 (J;US)

HEAVY WATER MODERATOR
See HEAVY WATER

HECTORITE
See MONTMORILLONITE

HEISENBERG PRINCIPLE
See UNCERTAINTY PRINCIPLE

HEISSDAMPFREAKTORANLAGE
See HDR REACTOR

HELIOSTATS
Computer Codes
Heliostat controller software source listing: version All-Barstow, 9:30539 (R;US)
Heliostat field controller software source listing: version A02, 9:30538 (R;US)
Computer-Aided Design
Evaluation and conception method of fields of focused heliostats, 9:30541 (R;FR;In French)
Control Systems
Collector subsystem, collector system functional test: Test Procedure 111. Revision 1, 9:30540 (R;US)
Heliostat controller software source listing: version All-Barstow, 9:30539 (R;US)
Heliostat field controller software source listing: version A02, 9:30538 (R;US)
Feasibility Studies
Evaluation and conception method of fields of focused heliostats, 9:30541 (R;FR;In French)
Operation
Operations instructions heliostat field subsystem for 10 megawatt solar power systems/central receiver system, 9:30536 (R;US)
Performance Testing
10 MWe solar thermal central receiver pilot plant. Collector subsystem functional test report, 9:30537 (R;US)

HELIUM
Atom-Atom Collisions
Collisional energy transfer in the low-pressure-limit unimolecular dissociation of HO_2, 9:31966 (J;US)
Temperature dependence of the de-excitation rate constants of excited rare gas atoms by atoms and molecules, 9:31949 (RA;AT)
Atom-Molecule Collisions
Temperature dependence of the de-excitation rate constants of excited rare gas atoms by atoms and molecules, 9:31949 (RA;AT)
Collisions
Adsorbate migration on macroscopic surfaces investigated by means of He beam scattering, 9:31899 (RA;AT)
Application of the semiclassical perturbation approximation to scattering from surfaces. Generalization to include phonon inelasticity, 9:31970 (J;US)
Geometric structure of surfaces studied with atomic-beam scattering, 9:31898 (RA;AT)
De-Excitation
Temperature dependence of the de-excitation rate constants of excited rare gas atoms by atoms and molecules, 9:31949 (RA;AT)
Ion-Atom Collisions
Investigation of energy dependent light emission cross sections for He^+-A_3 and $A^+{}_2$-He collisions and their interpretation by a Landau-Zener-model, 9:31909 (R;AT;In German)
Ion-Molecule Collisions
Mobility of Li^+ and K^+ ions in helium and argon at 294 and 80 K and derived interaction potentials, 9:31938 (RA;AT)
Temperature dependence of three-body ion-molecule reactions, 9:31926 (RA;AT)
Muonic Atoms
μ^+ charge exchange and muonium formation in low pressure gases, 9:31959 (R;CA)
Vacancies
Interaction of helium interstitial with vacancy, 9:31191 (RA;SU;In Russian)

HELIUM 3
Binding Energy
Some applications of the evolution method in a coupling constant in nuclear physics, 9:32225 (R;SU;In Russian)

HELIUM 3 TARGET
Proton Reactions
Elastic scattering of polarized protons from ^{3}He at intermediate energies, 9:32076 (R;CA)
Study of two-nucleon wave functions in ^{3}He, 9:32077 (R;CA)
HELIUM 4 REACTIONS
See ALPHA REACTIONS
HELIUM 4 TARGET
Alpha Reactions
Hard αp and $\alpha\alpha$ interactions, 9:32075 (RA;HU)
Particle production in α-α and α-p collisions at the CERN ISR, 9:32074 (RA;HU)
Search for charmed particles in neutrino induced reactions. A study of light-ion collisions at very high energy, 9:31994 (R;SE)
Proton Reactions
Hard αp and $\alpha\alpha$ interactions, 9:32075 (RA;HU)
Particle production in α-α and α-p collisions at the CERN ISR, 9:32074 (RA;HU)
HELIUM IONS
Backscattering
Analytical model for Rutherford ion backscattering from surfaces, 9:31894 (RA;AT)
Collisions
Analytical model for Rutherford ion backscattering from surfaces, 9:31894 (RA;AT)
Light emission from grazing incidence interaction of light ions with clean Cu(110), 9:31896 (RA;AT)
Low dose sputtering experiments, 9:31891 (RA;AT)
Diffusion
Transverse diffusion of mass-identified ions in their parent gases, 9:31934 (RA;AT)
Electronic Structure
Total and orbital SCF energies in molecules, 9:31971 (J;US)
Excited States
Population of nearly resonant Xesup(+*) states by charge transfer excitation from He^+ as studied spectroscopically in a flow drift tube (energy range: 0.04 - 2 eV; wavelength region: 584 - 1470 A), 9:31929 (RA;AT)
Ion-Atom Collisions
Alpha-particle-induced, inner-shell ionization measurements for the undergraduate laboratory, 9:31972 (J;US)
Investigation of energy dependent light emission cross sections for He^+-A_2 and $A^+{}_2$-He collisions and their interpretation by a Landau-Zener-model, 9:31909 (R;AT;In German)
Ion-Molecule Collisions
Collisions of singly and doubly charged ions with oxygen molecules in the energy range 1 - 1800 (3600) eV, 9:31903 (RA;AT)
Population of nearly resonant Xesup(+*) states by charge transfer excitation from He^+ as studied spectroscopically in a flow drift tube (energy range: 0.04 - 2 eV; wavelength region: 584 - 1470 A), 9:31929 (RA;AT)
HELIUM-NEON LASERS
Design
Helium-neon laser remote measurement of methane, 9:31124 (BA;US)
HEUSLER ALLOYS
Electric Conductivity
Electrical resistivity of the $Ni_2Mn(Sn_{sub(1-x)}In_{sub(x)})$ Heusler alloys, 9:31162 (RA;BR)
Electrical resistivity of the $Ni_2Mn(In_{sub(1-x)}Sn_{sub(x)})$ Heusler alloys, 9:31163 (RA;BR)
Electrical resistivity of Heusler alloy, 9:31164 (RA;BR)
Electrical resistivity of the Ni_2MnSn Heusler alloy, 9:31165 (RA;BR)
Magnetostriction
Magnetostriction of some Heusler alloys, 9:31169 (RA;BR)
HEXADECANE
Solvent Properties
Observation of gelation process in two dimensions, 9:31244 (J;US)
HFIR REACTOR
Reactor Operation
High Flux Isotope Reactor. Quarterly report, October-December 1983, 9:30852 (R;US)
HIGGS BOSONS
Particle Production
Calculation of the conjoined production of Higgs bosons and heavy flavours in p-antip collisions, 9:32025 (R;CA)
Sum Rules
Mass sum rule for Higgs bosons in arbitrary models, 9:32042 (J;US)
Symmetry Breaking
Mass sum rule for Higgs bosons in arbitrary models, 9:32042 (J;US)
HIGGS MODEL
Need to plan for a full-scale Ins-physics program at the SSC, 9:31979 (R;US)
Quantization
Quantization of spontaneously broken gauge theories in the unitary gauge through the Dirac bracket formalism, 9:32046 (RA;BR)
HIGH ALTITUDE (STRATOSPHERE)
See STRATOSPHERE
HIGH ENERGY PHYSICS
Use only for articles of a very broad nature such as an annual research program, etc.
Experiment Planning
Proceedings of the third LAMPF II workshop. Volume 1, 9:31991 (R;US)
Proceedings of the third LAMPF II workshop. Volume 2, 9:31992 (R;US)
Meetings
Proceedings of the third LAMPF II workshop. Volume 1, 9:31991 (R;US)
Proceedings of the third LAMPF II workshop. Volume 2, 9:31992 (R;US)
HIGH ENERGY RADIOTHERAPY
See RADIOTHERAPY
HIGH EXPLOSIVES
See CHEMICAL EXPLOSIVES
HIGH FLUX ISOTOPE REACTOR
See HFIR REACTOR
HIGH PRESSURE COOLANT INJECTION
See HPCI
HIGH TEMPERATURE GAS COOLED AND GRAPHITE
See HTGR TYPE REACTORS
HIGH-LEVEL RADIOACTIVE WASTES
After-Heat
Analytical approximations for the long-term decay behavior of spent fuel and high-level waste, 9:30370 (J;US)
Containers
Waste package, 9:30335 (RA;DK)
Leaching
Comparative leaching behavior of SYNROC B and a borosilicate glass, 9:30376 (J;US)
MCC-1: a standard leach test for nuclear waste forms, 9:30374 (J;US)
Mechanisms that control aqueous leaching of nuclear waste glass, 9:30377 (J;US)
Overview: Argonne workshop on comparative leaching behavior of radioactive waste forms, 9:30380 (J;US)
Radiation Hazards
Analytical approximations for the long-term decay behavior of spent fuel and high-level waste, 9:30370 (J;US)
Radionuclide Migration
Migration of brine inclusions in salt, 9:30384 (J;US)
Vitrification
Vitrified high-level waste, 9:30336 (RA;DK)
Waste-Rock Interactions
Application of glass corrosion concepts to nuclear waste immobilization, 9:30379 (J;US)
HIGH-PURITY GE DETECTORS
Charge Collection
Monte Carlo simulation of charge collection time in closed ended HP Ge gamma detectors, 9:31585 (J;US)
Computerized Simulation
Monte Carlo simulation of charge collection time in closed ended HP Ge gamma detectors, 9:31585 (J;US)

Damaging Neutron Fluence
Performance of reverse electrode HPGE coaxial detectors after light damage by fast neutrons, 9:31580 (J;US)
Energy Resolution
Deep level impurities in germanium and silicon: low temperature passivation or removal techniques, 9:31575 (J;US)
Fabrication
Hp Ge: Purification, crystal growth, and annealing properties, 9:31574 (J;US)
Physical Radiation Effects
Performance of reverse electrode HPGE coaxial detectors after light damage by fast neutrons, 9:31580 (J;US)
Specifications
Data acquisition and analysis systems. "Tools of the Trade", 9:31619 (RA;AT)

HIGHWAYS
See ROADS

HILACS
Cavity Resonators
Accelerating structure for heavy ion linear accelerators, 9:31472 (RA;SU;In Russian)
Historical Aspects
ATLAS - the world's first superconducting heavy ion accelerator is born, 9:31482 (J;GB)
Standing Waves
Calculation of heavy ion accelerating structure on the H_{111} wave, 9:31488 (RA;SU;In Russian)

HINKLEY POINT-B REACTOR
Fuel Elements
Measurements and calculations of the fuel temperature coefficient of reactivity for the Hinkley Point 'B' advanced gas-cooled reactor, 9:30750 (J;US)
Reactor Cores
Measurements and calculations of the fuel temperature coefficient of reactivity for the Hinkley Point 'B' advanced gas-cooled reactor, 9:30750 (J;US)
Reactor Kinetics
Measurements and calculations of the fuel temperature coefficient of reactivity for the Hinkley Point 'B' advanced gas-cooled reactor, 9:30750 (J;US)

HISTONES
Neutron Diffraction
Neutron scattering studies of the H2a-H2b and $(H3\text{-}H4)_2$ histone complexes, 9:31728 (R;US)
Nuclear Magnetic Resonance
Neutron scattering studies of the H2a-H2b and $(H3\text{-}H4)_2$ histone complexes, 9:31728 (R;US)

HO2
See HYDROPEROXY RADICALS

HOG FUEL
See WOOD WASTES

HOISTS
Operation
Construction characteristics of a main shaft conveying with guide ropes, 9:31462 (R;DE;In German)
Ropes
Slack and overload rope protection system. Open file report, 28 Mar 79-15 Jan 83, 9:30211 (R;US)
Safety Engineering
Slack and overload rope protection system. Open file report, 28 Mar 79-15 Jan 83, 9:30211 (R;US)

HOLLANDITE
Leaching
Continuous-flow leaching studies of crushed and cored SYNROC, 9:30372 (J;US)

HOSPITALS
Radiation Protection Laws
Radiation hazard control in hospitals. Training manual I, 9:31734 (R;CA)
Waste Disposal
Health hazard evaluation report No. HETA 82-056-1186, Monroe County Incinerator, Key Largo, Florida, 9:31686 (R;US)
X-Ray Equipment
Statistical frequency analysis to obtain guiding values for the basic planning of X-ray diagnostic departments, 9:31739 (R;DE;In German)

HOT ATOM CHEMISTRY
Recoils
Cage effect in recoil studies, 9:31361 (R;HU)

HOT GAS CLEANUP
Hot gas desulphurization of combustion gases and reduction gases, 9:30174 (R;DE;In German)

HOT WATER HEATERS
See WATER HEATERS

HOUSEHOLDS
Electric Power
Electric power utilization for the space heat market of households facilitating petroleum substitution, 9:31021 (R;DE;In German)
Energy Demand
Electric power utilization for the space heat market of households facilitating petroleum substitution, 9:31021 (R;DE;In German)
Fuel Substitution
Electric power utilization for the space heat market of households facilitating petroleum substitution, 9:31021 (R;DE;In German)
Heating Oils
Electric power utilization for the space heat market of households facilitating petroleum substitution, 9:31021 (R;DE;In German)
Space Heating
Electric power utilization for the space heat market of households facilitating petroleum substitution, 9:31021 (R;DE;In German)

HOUSES
Air Quality
Continuous measurements of radon entry in a single family house, 9:31669 (J;US)
Airtightness
Airtightness of the building envelope, 9:31069 (R;FI;In Finnish)
Photovoltaic Power Supplies
A review of the experiences of the U.S. Department of Energy photovoltaic residential experiment stations, 9:30518 (BA;NL)
Battery storage in residential applications of energy from photovoltaic sources, 9:30529 (J;GB)
Study of photovoltaic systems adapted to dwellings connected to the electric network, 9:30526 (R;FR;In French)
Solar Space Heating
City of Macon, Missouri solar energy project. Final report, 9:30554 (R;US)
Direct gain passive solar, domestic hot water and wind generation system. Final technical report, 9:30553 (R;US)
Solar Water Heating
Direct gain passive solar, domestic hot water and wind generation system. Final technical report, 9:30553 (R;US)
Thermal Insulation
Airtightness of the building envelope, 9:31069 (R;FI;In Finnish)
Case study of the Blouin superinsulated house, 9:31053 (R;US)
Weatherization
First things first, 9:31059 (R;US)

HPCI
Evaluation
FRANTIC II: applications to standby safety systems, 9:30936 (R;US)
Heat Transfer
Transient thermal mixing in a full-height PWR cold leg and downcomer. Final report, 9:30872 (R;US)
Hydraulics
Transient thermal mixing in a full-height PWR cold leg and downcomer. Final report, 9:30872 (R;US)

HTGR TYPE REACTORS
See also VRAIN REACTOR

Coal Gasification
Synthetic fuel production using Texas lignite and a very high temperature reactor for process heat, 9:30748 (J;US)
Coal Liquefaction
Synthetic fuel production using Texas lignite and a very high temperature reactor for process heat, 9:30748 (J;US)
Coated Fuel Particles
Fission product Pd-SiC interaction in irradiated coated-particle fuels, 9:30746 (J;US)
Fuel Assemblies
Estimate of cross flow in high temperature gas-cooled reactor fuel blocks, 9:30749 (J;US)
Fuel Rods
Resonance absorption in high-temperature gas-cooled reactor fuel with double heterogeneity, 9:30753 (J;US)
Power Generation
Prospects for non-electric application of high temperature reactors, 9:30751 (J;US)
Primary Coolant Circuits
Estimate of cross flow in high temperature gas-cooled reactor fuel blocks, 9:30749 (J;US)
Process Heat
Prospects for non-electric application of high temperature reactors, 9:30751 (J;US)
Reactor Cores
Estimate of cross flow in high temperature gas-cooled reactor fuel blocks, 9:30749 (J;US)

HTO

HUMAN FACTORS
Nuclear Data Collections
Concept development of the human reliability data bank, 9:30919 (RA;US)
Reporting Requirements
Nuclear power safety reporting system feasibility analysis and concept description, 9:30920 (RA;US)

HUMAN POPULATIONS
See also A-BOMB SURVIVORS
Diet
Prehistoric variability of metal and $^{13}C/^{12}C$ content in bone: dietary and gender factors, 9:31829 (R;US)
Nutrition
Forum introduction, forum on stable isotopic and metals composition, nutrition, and human adaptation, 9:31830 (R;US)
Radiation Doses
HERMES; regional radiological effects analysis. Software, 9:31674 (R;US)

HUMANS
See HUMAN POPULATIONS

HUNGARY
Radioactive Waste Disposal
Bituminous solidification, disposal, transport and burial of spent ion-exchange resins. Part of a coordinated programme on treatment of spent ion exchange resins. Final report for the period 1 June 1980 - 30 June 1983, 9:30334 (R;AT)
Radioactive Waste Processing
Bituminous solidification, disposal, transport and burial of spent ion-exchange resins. Part of a coordinated programme on treatment of spent ion exchange resins. Final report for the period 1 June 1980 - 30 June 1983, 9:30334 (R;AT)

HYBRID REACTORS
Economics
Tritium-assisted fusion breeders, 9:32366 (R;US)
Reactor Safety
Status report on the fusion breeder, 9:30854 (J;US)

HYDRATED ELECTRONS
See SOLVATED ELECTRONS

HYDRAULIC RAMS
See PUMPS

HYDRIODIC ACID
Chemical Reaction Yield
Modification of the sulfur dioxide-iodine thermochemical hydrogen cycle with lanthanum sulfites and sulfates, 9:30435 (R;US)
Muonic Molecules
Application of the muonium spin rotation technique to a study of the gas phase chemical kinetics of muonium reaction with the halogens and hydrogen halides, 9:31873 (R;CA)

HYDROBROMIC ACID
Muonic Molecules
Application of the muonium spin rotation technique to a study of the gas phase chemical kinetics of muonium reaction with the halogens and hydrogen halides, 9:31873 (R;CA)

HYDROCARBON FUEL CELLS
Cogeneration
Fuel cell cogeneration using anaerobic digester gas, 9:31050 (J;US)

HYDROCARBONS

Energy Management
Power pool in Norway. Annual report 1982, 9:30688 (R;NO;In Norwegian)

Environmental Impact Statements
Susitna Hydroelectric Project, FERC No. 7114 - Alaska. Volume 1. Main text. Draft environmental impact statement, 9:30495 (R;US)
Susitna hydroelectric project, FERC No. 7114 - Alaska. Volume 2. Appendices A through D. Draft environmental impact statement, 9:30496 (R;US)
Susitna hydroelectric project, FERC No. 7114 - Alaska. Volume 4. Appendices H and I. Draft environmental impact statement, 9:30498 (R;US)
Susitna hydroelectric project, FERC No. 7114 - Alaska. Volume 5. Appendices J and K. Draft environmental impact statement, 9:30499 (R;US)
Susitna hydroelectric project, FERC No. 7114 - Alaska. Volume 6. Appendices L and M. Draft environmental impact statement, 9:30500 (R;US)
Susitna hydroelectric project, FERC No. 7114 - Alaska. Volume 7. Appendices N and O. Draft environmental impact statement, 9:30501 (R;US)
Sustina hydroelectric project, FERC No. 7114 - Alaska. Volume 3. Appendices E through G. Draft environmental impact statement, 9:30497 (R;US)
Technology Utilization
Advances in the state-of-the-art of small hydropower engineering technology, 9:30494 (J;US)

HYDROELECTRICITY
See HYDROELECTRIC POWER

HYDROFLUORIC ACID
Inhalation
Acute toxicity of the hydrolysis products of uranium hexafluoride (UF_6) when inhaled by the rat and guinea pig. Final report, 9:31808 (R;US)
Toxicity
Acute toxicity of the hydrolysis products of uranium hexafluoride (UF_6) when inhaled by the rat and guinea pig. Final report, 9:31808 (R;US)
Control technology assessment of petroleum refinery operations: indepth site visit report, Sigmor Three Rivers Refinery, 9:30237 (R;US)

HYDROGEN
Adsorption
Coadsorption and reaction of H_2 and CO on Raney nickel: Neutron vibrational spectroscopy, 9:31175 (RA;AT)
Adsorption Isotherms
Hydrogen chemisorption suppression in Ru-zeolite catalysts, 9:30459 (RA;US)
Alpha Reactions
Interaction of 2.1 GeV/c/n alpha particles with light and heavy nuclei, 9:32080 (RA;HU)
Atom-Molecule Collisions
Quantum Monte Carlo study of the classical barrier height for the H + H_2 exchange reaction: restricted VERSUS unrestricted trial functions, 9:31954 (R;US)
Catalysis
Coadsorption and reaction of H_2 and CO on Raney nickel: Neutron vibrational spectroscopy, 9:31175 (RA;AT)
Chemisorption
Hydrogen chemisorption suppression in Ru-zeolite catalysts, 9:30459 (RA;US)
Support effects on CO hydrogenation over Ru/zeolite catalysts, 9:30463 (RA;US)
Collisions
Hydrogen recombination reaction on Ni investigated with atomic beams, 9:31902 (RA;AT)
Combustion
Hydrogen transport, mixing, and combustion studies, 9:30879 (R;US)
Deuteron Reactions
Determination of parameters of deuteron six-quark component, 9:32087 (R;SU)
Electronic Structure
Total and orbital SCF energies in molecules, 9:31971 (J;US)
Freezing
Effect of feed gas trace components on the SRC-I hydrogen purification unit. Final technical report, 9:30133 (R;US)
Gas Production Rates
Experimental modeling of hydrogen evolution rates from surfaces with exposed aluminum in contact with containment sprays in pressurized water reactor nuclear power plants, 9:30740 (J;US)
Impurities
Effect of feed gas trace components on the SRC-I hydrogen purification unit. Final technical report, 9:30133 (R;US)
Ion-Atom Collisions
Method to study reactions between ions and atomic hydrogen in a quasistatic drift tube, 9:31931 (RA;AT)
Reactions of CO_2^+ and CH_3^+ with atomic hydrogen studied in a flow drift experiment, 9:31932 (RA;AT)
Ion-Molecule Collisions
Internal energy of N_4^+ drifting in N_2 and He, 9:31941 (RA;AT)
Laboratory studies of H/D exchange in the reactions of H_3^+ with H_2, 9:31925 (RA;AT)
Method to study reactions between ions and atomic hydrogen in a quasistatic drift tube, 9:31931 (RA;AT)
Self-consistent time-dependent, Hartree-Fock calculation for a reactive molecular collision, 9:31973 (J;US)
Muonic Molecules
μ^+ charge exchange and muonium formation in low pressure gases, 9:31959 (R;CA)
Application of the muonium spin rotation technique to a study of the gas phase chemical kinetics of muonium reaction with the halogens and hydrogen halides, 9:31873 (R;CA)
Photoionization
Scattering theory for explicitely time-dependent interactions, 9:32274 (R;AT;In German)
Purification
Effect of feed gas trace components on the SRC-I hydrogen purification unit. Final technical report, 9:30133 (R;US)
Recombination
Hydrogen recombination reaction on Ni investigated with atomic beams, 9:31902 (RA;AT)
Measurements of the dissociative recombination coefficients for O_2^+, NH_4^+, H_3O^+ and NO^+ at thermal energies, 9:31943 (RA;AT)

HYDROGEN 1 TARGET
Alpha Reactions
Main features of the four nucleon interactions at medium energies and Glauber sum rules, 9:32073 (RA;HU)
Search for charmed particles in neutrino induced reactions. A study of light-ion collisions at very high energy, 9:31994 (R;SE)
Neutron Reactions
Pion production on light nuclei by medium energy neutrons, 9:32070 (RA;HU)
Triton Reactions
Main features of the four nucleon interactions at medium energies and Glauber sum rules, 9:32073 (RA;HU)

HYDROGEN 2
See DEUTERIUM

HYDROGEN 3
See TRITIUM

HYDROGEN BROMIDES
See HYDROBROMIC ACID

HYDROGEN CHLORIDES
See HYDROCHLORIC ACID

HYDROGEN COMPOUNDS
See also BOROHYDRIDES
HYDROGEN PEROXIDE
HYDROGEN SULFIDES
WATER
Photochemical Reactions
Photochemical conversion of $H_2Os_3(CO)_{10}$(p-donor) to $H_2Os_3(CO)_9$(p-donor) in solution and on high surface area silica. Interim technical report, 9:31327 (R;US)

HYDROGEN FLUORIDES
See HYDROFLUORIC ACID

HYDROGEN HYDROXIDES
See WATER

HYDROGEN IODIDES
See HYDRIODIC ACID

HYDROGEN IONS 1 MINUS
For H_1^- ions.

Negative ion formation due to hydrogen plasma surface interaction, 9:32360 (R;US)

HYDROGEN IONS 1 PLUS
For H_1^+ ions.
Collisions
Light emission from grazing incidence interaction of light ions with clean Cu(110), 9:31896 (RA;AT)
Ion Collisions
Compton profiles in solids by inelastic ion-electron scattering, 9:31882 (RA;DE;In German)
Ion-Molecule Collisions
Differential cross sections for ionization of methane, ammonia, and water vapor by high velocity ions, 9:31968 (J;US)
Secondary electron spectra in the trace of fast ions in water vapor, 9:31877 (R;DE ;In German)
Self-consistent time-dependent, Hartree-Fock calculation for a reactive molecular collision, 9:31973 (J;US)

HYDROGEN IONS 2 PLUS
For H_2^+ ions.
Collisions
Light emission from grazing incidence interaction of light ions with clean Cu(110), 9:31896 (RA;AT)

HYDROGEN IONS 3 PLUS
For H_3^+ ions.
Ion-Molecule Collisions
Laboratory studies of H/D exchange in the reactions of H_3^+ with H_2, 9:31925 (RA;AT)

HYDROGEN NITRATES
See NITRIC ACID

HYDROGEN PEROXIDE
Atmospheric Chemistry
Studies in atmospheric chemistry. I. Primary peroxides from hydrocarbons. II. Elemental analysis using nuclear reactions, 9:31653 (R;US)
Chemical Reactions
Oxidation effects of hydrogen peroxide catalyzed by photosensitized uranyl, 9:31360 (RA;IL;In French)

HYDROGEN PHOSPHATES
See PHOSPHORIC ACID

HYDROGEN PRODUCTION
Biophotolysis
SERI Biomass Program. FY 1983 annual report, 9:30473 (R;US)
Biosynthesis
Anaerobic digestion subprogram, 9:30474 (RA;US)
Photo/biological hydrogen subprogram, 9:30439 (RA;US)
Electrolysis
Chemical/hydrogen energy systems. Annual report, January 1, 1983-December 31, 1983, 9:30433 (R;US)
Hydrogen production methods. A critical assessment, 9:30432 (R;CA)
Market potential of electrolytic hydrogen production in three northeastern utilities' service territories. Final report, 9:30434 (R;US)
Market
Market potential of electrolytic hydrogen production in three northeastern utilities' service territories. Final report, 9:30434 (R;US)
Photochemical Reactions
Catalyzed photodissociation of water, 9:30438 (R;US)
Research Programs
Chemical/hydrogen energy systems. Annual report, January 1, 1983-December 31, 1983, 9:30433 (R;US)
SERI Biomass Program. FY 1983 annual report, 9:30473 (R;US)
Thermochemical Processes
Hydrogen production methods. A critical assessment, 9:30432 (R;CA)
Modification of the sulfur dioxide-iodine thermochemical hydrogen cycle with lanthanum sulfites and sulfates, 9:30435 (R;US)
Use of oxides in thermochemical water-splitting cycles for solar heat sources. Copper oxides, 9:30436 (R;US)
Use of oxides in thermochemical water-splitting cycles for solar heat sources. Copper oxides. Revision, 9:30437 (R;US)

HYDROGEN STORAGE
Research Programs
Chemical/hydrogen energy systems. Annual report, January 1, 1983-December 31, 1983, 9:30433 (R;US)

HYDROGEN SULFATES
See SULFURIC ACID

HYDROGEN SULFIDES
Removal
Laboratory tests of phenol removal and ammonia and hydrogen sulfide stripping from SRC-I wastewater. Final technical report, 9:30132 (R;US)

HYDROPEROXY RADICALS
HO2
Atom-Atom Collisions
Collisional energy transfer in the low-pressure-limit unimolecular dissociation of HO_2, 9:31966 (J;US)

HYDROXYL IONS
See ANIONS

HYDROXYL RADICALS
Chemical Reactions
Chemical reaction as a quantum transition (ClI + D → Cl + ID; OH + D → OD + H), 9:32280 (R;US)

HYPERFRAGMENTS
See HYPERNUCLEI

HYPERNUCLEI
Nuclear Structure
Nuclear structure and hypernuclei, 9:32186 (RA;HU)
Production
Probability of hypernucleus production in high-energy heavy-ion collisions, 9:32187 (RA;HU)

HYPERTHERMIA
Biological Effects
Effects of suspended volcanic ash and thermal shock on susceptibility of juvenile salmonids to disease, 9:31814 (R;US)

I

ICE
Crystal Lattices
Evidence for anisotropic diffusion of Mu in ice and implications for H, 9:31961 (R;CA)

ICES
Power plant retrofit to district heating and cooling projects and grid-connected integrated community energy systems projects. Program summary meeting, 1983, 9:31104 (R;US)

ICIP
International Centre for Theoretical Physics, Trieste
Research Programs
International Centre for Theoretical Physics: scientific activities in 1982, 9:31010 (R;AT)

IDAHO
See also RAFT RIVER VALLEY
Land Use
Evaluation of four completed small watershed projects: South Carolina, Maryland, Idaho-Nevada, and West Virginia. Agricultural economic report, 9:31006 (R;US)

IDAHO CHEMICAL PROCESSING PLANT
Calcined Wastes
Leaching properties and chemical composition of calcines produced at the Idaho Chemical Processing Plant, 9:30375 (J;US)

IDAHO NATIONAL ENGINEERING LABORATORY
Prior to 1976 known as NRTS and older material is so indexed.
Radioactive Waste Facilities
Waste Experimental Reduction Facility: description and progress report, 9:30325 (R;US)

ILLINOIS
See also CHICAGO
Pollution Regulations
Regional, new source bubble policy: its advantages illustrated for the State of Illinois, 9:31668 (J;US)

ILLITE
Geochemistry
Geochemistry of the Dakota Formation of northwestern New Mexico: relevance to radioactive waste studies, 9:30365 (J;US)
ILLUMINANCE
Mathematical Models
A sky radiation-illumination correlation model, 9:30505 (BA;US)
ILLUMINATION
See ILLUMINANCE
IMAGE INTENSIFIERS
Amplification
Nanogate- a nanosecond gated image intensifier with high gain and high resolution, 9:31583 (J;US)
Comparative Evaluations
Nanosecond image shuttering studies at Los Alamos National Laboratory, 9:31588 (J;US)
Design
A diode intensifier tube designed for scintillation detection, 9:31582 (J;US)
High-speed motion neutron radiography, 9:31610 (J;US)
Gating Circuits
Nanosecond image shuttering studies at Los Alamos National Laboratory, 9:31588 (J;US)
Performance
A diode intensifier tube designed for scintillation detection, 9:31582 (J;US)
High-speed motion neutron radiography, 9:31610 (J;US)
Response Functions
Nanosecond image shuttering studies at Los Alamos National Laboratory, 9:31588 (J;US)
Spatial Resolution
Nanogate- a nanosecond gated image intensifier with high gain and high resolution, 9:31583 (J;US)
Time Resolution
High-speed motion neutron radiography, 9:31610 (J;US)
Nanogate- a nanosecond gated image intensifier with high gain and high resolution, 9:31583 (J;US)
IMAGE SCANNERS
Data Processing
Eigenfunctions of angular scanning via charge-coupled device-matrix, 9:32414 (R;XJ;In Russian)
IMAGE TUBES
Photoconductivity
Using photoconductivity to improve image tube gating speeds, 9:31584 (J;US)
Timing Properties
Using photoconductivity to improve image tube gating speeds, 9:31584 (J;US)
IMPURITIES
Unwanted constituents, not for TRACE AMOUNTS, INTERFERING ELEMENTS, or metal and nonmetal additions.
Removal
Effect of feed gas trace components on the SRC-I hydrogen purification unit. Final technical report, 9:30133 (R;US)
Transport Theory
Investigation of neutral beam driven impurity flow reversal as an impurity control method in future tokamaks, 9:32313 (R;US)
Rotation and impurity transport in a tokamak plasma with directed neutral beam injection, 9:32314 (R;US)
IN CORE INSTRUMENTS
See also specific instruments plus FUEL ASSEMBLIES or REACTOR CORES.
Performance
C-E in-core instrumentation - Functions and performance, 9:30828 (J;US)
Performance Testing
Wide range neutron monitor, 9:30827 (J;US)
INCINERATION
See COMBUSTION
INCINERATORS
See also WATERWALL INCINERATORS
Air Pollution
Sampling and analysis methods for hazardous waste combustion. Final report, 9:31660 (R;US)
Air Pollution Control
Air pollution control: an advanced state of the art technology, 9:30491 (BA;US)
Electrostatic Precipitators
Electrostatic precipitator for the control of HCl and particulate emissions from a municipal incinerator, 9:31673 (BA;US)
Gaseous Wastes
Environmental consequences arising from the combustion of municipal solid waste, 9:31121 (BA;US)
Heat Recovery
Waste heat recovery at municipal solid waste incinerators: test program implemented at New York City's Southwest Brooklyn Incinerator, 9:31130 (BA;US)
INCOLOY 800
Corrosion
Corrosion in atmospheric fluidized bed combustors--the reactions of $CaSO_4$ with Cr, Ni, Co, Fe, and several alloys, 9:31214 (J;US)
Oxidation
Corrosion in atmospheric fluidized bed combustors--the reactions of $CaSO_4$ with Cr, Ni, Co, Fe, and several alloys, 9:31214 (J;US)
Sulfidation
Corrosion in atmospheric fluidized bed combustors--the reactions of $CaSO_4$ with Cr, Ni, Co, Fe, and several alloys, 9:31214 (J;US)
INCONEL 600
Corrosion Denting
Causes of denting. Volume 3. Plant chemistry correlations. Final report, 9:30716 (R;US)
INDAN
Structural Chemical Analysis
Synthesis of indanes, tetralins and carotanes, and characterization of indanes and tetralins. Final report, May 1, 1982-April 30, 1984 (Alkylated tetralins and indanes), 9:30159 (R;US)
Synthesis
Synthesis of indanes, tetralins and carotanes, and characterization of indanes and tetralins. Final report, May 1, 1982-April 30, 1984 (Alkylated tetralins and indanes), 9:30159 (R;US)
INDIUM 111
Crystal Field
Temperature dependence of the EFG in In in the compound Tl_3Te_3, 9:31151 (RA;BR)
INDIUM ALLOYS
Magnetoresistance
Inhomogeneity effects in the magnetoresistance measurements in thin mixture films of In-Ge, 9:31176 (RA;IL)
INDIUM COMPOUNDS
Crystal Field
Experimental study of the electric field gradient in In_5Bi_3, 9:31150 (RA;BR)
Nuclear quadrupole interaction study of high pressure phase transition in In-Bi intermetallic compounds, 9:31152 (RA;BR)
Crystal-Phase Transformations
Nuclear quadrupole interaction studies of high pressure phase transitions in InSb, 9:31249 (RA;BR)
Electric Fields
Nuclear quadrupole interaction studies of high pressure phase transitions in InSb, 9:31249 (RA;BR)
Temperature dependence of the electric field gradient in $AgIn_2$, 9:31153 (RA;BR)
INDIUM PHOSPHIDE SOLAR CELLS
Fabrication
Thin-film indium phosphide photovoltaic device research and development. Final report, 9:30511 (R;US)
INDONESIA
International Agreements
Agreement between the Government of Canada and the Government of the Republic of Indonesia concerning the peaceful uses of nuclear energy, 9:31014 (R;CA;In English, French)

Volcanism
Eruptive history of the Dieng mountains region, central Java, and potential hazards from future eruptions, 9:31836 (R;US)

INDOOR AIR POLLUTION
Measuring Methods
Continuous measurements of radon entry in a single family house, 9:31669 (J;US)
Standards
Criteria for a recommended standard: occupational exposure to styrene, 9:31681 (R;US)

INDUCED POLARIZATION LOGGING
Resistivity, induced polarization, and self-potential methods in geothermal exploration, 9:30582 (R;US)

INDUSTRIAL PLANTS
See also COAL GASIFICATION PLANTS
COAL LIQUEFACTION PLANTS
COAL PREPARATION PLANTS
DESALINATION PLANTS
OIL SAND PROCESSING PLANTS
OIL SHALE PROCESSING PLANTS
OXYGEN PLANTS
PETROLEUM REFINERIES
SYNTHETIC FUELS REFINERIES
WASTE PROCESSING PLANTS
Cogeneration
Market development for advanced coal-based cogeneration systems by the year 2000. Final report, 9:31016 (R;US)
Computerized Control Systems
Design philosophy for reliable systems, including control, 9:32403 (R;US)

INDUSTRIAL RADIOGRAPHY
See also BIOMEDICAL RADIOGRAPHY.
See also GAMMA RADIOGRAPHY
NEUTRON RADIOGRAPHY
Radiation Protection Laws
Radiation safety program for portable defectoscopes in industrial buildings, 9:30418 (RA;SU)

INDUSTRIAL SECTOR

Heat Recovery Equipment
Emerging technology from the DOE industrial heat pump program, 9:31087 (R;US)

INFORMATION DISSEMINATION
Non-technical introduction to the planning, implementation, and evaluation of utility communication programs, 9:31032 (R;US)
Bibliographies
Annotated archive of communication references: empirical and theoretical works, 9:32391 (R;US)
Global Aspects
Guideline for implementation of ANSI codes for the representation of names of countries, dependencies, and areas of special sovereignty, 9:32439 (R;US)
Recommendations
Guideline for implementation of ANSI codes for the representation of names of countries, dependencies, and areas of special sovereignty, 9:32439 (R;US)

INFORMATION SYSTEMS
Classification
Local area networks: A matter of choice, 9:32426 (J;US)
Technology Assessment
Local area networks: A matter of choice, 9:32426 (J;US)
Technology Utilization
Local area networks: A matter of choice, 9:32426 (J;US)

INHOMOGENEOUS PLASMA
Plasma Waves
Non-geometrical optics investigation of mode conversion in weakly relativistic inhomogeneous plasmas. Annual progress report, September 14, 1983-May 14, 1984, 9:32305 (R;US)

INJECTION WELLS
Testing
Nonisothermal effects during injection and falloff tests, 9:30591 (R;US)

INPUT WELL
See INJECTION WELLS

IN-SERVICE INSPECTION
Ultrasonic Testing
Qualification of ultrasonic testing for nuclear inservice inspection applications, 9:31424 (R;US)

IN-SITU COMBUSTION
Waste Water
Biological oxidation of organic constituents in tar-sand combustion-process water, 9:30276 (J;US)

IN-SITU GASIFICATION
Overburden
Remanent and rock magnetic properties at the Hanna, Wyoming underground coal gasification site: Hanna II phases 2 and 3 experiment, 9:30117 (R;US)

IN-SITU RETORTING
Mathematical Models
Reaction kinetics for modeling oil shale retorting, 9:30272 (J;US)
Reaction Kinetics
Reaction kinetics for modeling oil shale retorting, 9:30272 (J;US)

INSPECTION

SODIUM IONS
SULFUR IONS
URANIUM IONS
XENON IONS
Recombination
3rd international swarm seminar. Proceedings, 9:31918 (R;AT)
Strong-Coupling Model
Strong ion coupling effects at high density of inertial confinement fusion plasmas, 9:32388 (J;GB)
IONS (ATOMIC)
See ATOMIC IONS
IONS (MOLECULAR)
See MOLECULAR IONS
IOWA
Resource Recovery Facilities
Ames Solid Waste Recovery System: update, 9:30489 (BA;US)
IRIDIUM
Electron Collisions
Electronic structure on metal surfaces by electron energy loss spectroscopy, 9:31885 (RA;AT)
Surface Properties
Electronic structure on metal surfaces by electron energy loss spectroscopy, 9:31885 (RA;AT)
IRIDIUM COMPOUNDS
See also IRIDIUM OXIDES
Laves Phases
5f-electrons in uranium laves-phase compounds. Photoemission from UMn_2, UFe_2, UCo_2, UFeNi, UOs_2 and UIr_2, 9:31180 (RA;IL)
Photoemission
5f-electrons in uranium laves-phase compounds. Photoemission from UMn_2, UFe_2, UCo_2, UFeNi, UOs_2 and UIr_2, 9:31180 (RA;IL)
IRIDIUM OXIDES
Electrochromism
Electrochromic materials for the regulation of solar energy transmission through windows, 9:30558 (R;US)
IRON
See also IRON-ALPHA
Capture
Measurements of structural material capture to uranium-235 fission rate ratios in an intermediate spectrum assembly, 9:30785 (J;US)
Catalytic Effects
Catalytic influence of inorganic coal compounds on the gasification of coals with hydrogen and water vapor, 9:30146 (R;DE;In German)
Energy Absorption
Effect of fluorescence, bremsstrahlung, and annihilation radiation on the spectra and energy deposition of gamma rays in bulk media, 9:30802 (J;US)

Equations of State
EOS for Armco Iron at pressures less than 100 GPa, 9:31202 (R;US)
Neutron Reactions
Measurements of structural material capture to uranium-235 fission rate ratios in an intermediate spectrum assembly, 9:30785 (J;US)
Radiation Effects
Effect of fluorescence, bremsstrahlung, and annihilation radiation on the spectra and energy deposition of gamma rays in bulk media, 9:30802 (J;US)

IRON ALLOYS
See also FERRITE
INCONEL 600
IRON BASE ALLOYS
Auger Electron Spectroscopy
Study of interfaces in the oxidised Fe/Si system: Use of the Auger parameter, 9:31888 (RA;GB)
Corrosion Inhibitors
Determination of the minimum surface enrichment of molybdenum required to inhibit active dissolution of an Fe-Cr-Ni-Mo alloy, 9:31212 (J;US)
Electric Conductivity
Electrical resistivity of the Cobalt-rich Co-Fe alloys, 9:31166 (RA;BR)
Magnetoresistance
Magnetoresistance of Pd-Fe and Pd-Ni-Fe alloys, 9:31170 (RA;BR)
Magnetostriction
Magnetostriction of Pd-Fe alloys and the split band model, 9:31167 (RA;BR)
Neutron Diffraction
Spin correlations and reentrant spin-glass behavior in amorphous Fe-Mn alloys. II. Dynamics, 9:31211 (J;US)
Order-Disorder Transformations
Effect of high pressure on the order-disorder transitions in Fe-Ni alloys, 9:31154 (RA;BR)
Physical Radiation Effects
High temperature magnetic after-effect in commercial non-oriented iron-silicon steel following neutron irradiation and plastic deformation, 9:31177 (RA;CH)
Silicon Additions
Study of interfaces in the oxidised Fe/Si system: Use of the Auger parameter, 9:31888 (RA;GB)
Spin Glass State
Spin correlations and reentrant spin-glass behavior in amorphous Fe-Mn alloys. II. Dynamics, 9:31211 (J;US)

IRON BASE ALLOYS
See also STEELS
Corrosion
Corrosion of iron, aluminum and copper-base alloys in glycols under simulated solar collector conditions, 9:30572 (J;US)
Physical Radiation Effects
Evolution of cavity microstructure in ion-irradiated 316 SS and Fe-20Ni-15Cr alloy (Fe-20Ni-15Cr), 9:31144 (R;US)

IRON COMPOUNDS
See also IRON HYDRIDES
IRON OXIDES
Electronic Structure
Self-consistent model calculation of the electronic structure of ordered, disordered and hydrogenated Pd_3Fe, 9:31159 (RA;BR)
Laves Phases
5f-electrons in uranium laves-phase compounds. Photoemission from UMn_2, UFe_2, UCo_2, UFeNi, UOs_2 and UIr_2, 9:31180 (RA;IL)
Moessbauer Effect
^{57}Fe Moessbauer study in the ternary hydrides of $ErFe_3$, 9:31156 (RA;BR)
Photoemission
5f-electrons in uranium laves-phase compounds. Photoemission from UMn_2, UFe_2, UCo_2, UFeNi, UOs_2 and UIr_2, 9:31180 (RA;IL)
Spin Orientation
Spin-reorientation in (Er sub(1-x) Gd sub(x))Fe_3 compounds, 9:31157 (RA;BR)

IRON GARNETS
See FERRITE GARNETS

IRON HYDRIDES
Hyperfine Structure
Hyperfine interactions in the $ErFe_3$ H sub(2.7) hydride, 9:31251 (RA;BR)
Moessbauer Effect
^{57}Fe Moessbauer investigation of the ternary hydride Pd_3FeH sub(x), 9:31225 (RA;BR)

IRON IONS
Electron Exchange
Theory of the Fe^{2+}-Fe^{3+} electron exchange in water, 9:31314 (R;US)
Electron Spin Resonance
EPR in iron-doped gamma irradiated cadmium sulfide single crystals, 9:31262 (RA;SU;In Russian)

IRON OXIDES
See also WOLFRAMITE
ZIRCONOLITE
Diffusion
Point defects and diffusion mechanisms in the monoxides of the iron-group metals, 9:31221 (R;US)
Moessbauer Effect
Identification of iron oxides in the clay fraction of Dusky red latosol, 9:31226 (RA;BR)
Photochemical Reactions
Catalyzed photodissociation of water, 9:30438 (R;US)
X-Ray Diffraction
Identification of iron oxides in the clay fraction of Dusky red latosol, 9:31226 (RA;BR)

IRON-ALPHA
Physical Radiation Effects
Interaction of helium interstitial with vacancy, 9:31191 (RA;SU;In Russian)

IRRADIATION DEVICES
Cesium 137
Portable gamma-irradiator - a modified model, 9:30419 (RA;SU)
Computer-Aided Design
DOSKMF2 - A contribution to the computer-aided design of dose rate distributions, 9:30421 (RA;SU)
Planning of dose rate distribution of radiation fields by computer, 9:30420 (RA;SU)
Portable Equipment
Portable gamma-irradiator - a modified model, 9:30419 (RA;SU)

IRRADIATION RIGS
See IRRADIATION DEVICES

ISABELLE
See ISABELLE STORAGE RINGS

ISABELLE STORAGE RINGS
Materials
The effect of delta-ferrite upon the low temperature mechanical properties of centrifugally cast stainless steels, 9:31217 (BA;US)

ISOBUTANE
See 2-METHYLPROPANE

ISRAEL
Physics
1983 annual meeting. Program and abstracts, 9:31861 (R;IL)

ISX TOKAMAK
Plasma Diagnostics
Surface probe measurements in ISX-B and EBT-S, 9:32316 (RA;AT)

ITALY
Energy Policy
Effect of US coal exports on domestic economic growth and on US national security (1983 to 2000), 9:30153 (R;US)
Italy - energy situation 1982, 9:30247 (R;DE;In German)
Energy Supplies
Italy - energy situation 1982, 9:30247 (R;DE;In German)
Nuclear Materials Management
Decree of 4 November 1982 on conditions for notification of possession of special fissile materials and source materials and for keeping accounts thereof, 9:30398 (R;IT;In Italian)
Storage Facilities
Oil inventory capacity in selected countries and estimates of global inventory fluctuations: 1978 to 1982, 9:30243 (R;US)

IUS

JAPAN
Fossil-Fuel Power Plants
Fabric filtration in Japan, 9:30668 (RA;US)
International Relations
Informal handbook for long-term exchangees in US-Japan cooperation program in fusion research, 9:32353 (R;US)
Storage Facilities
Oil inventory capacity in selected countries and estimates of global inventory fluctuations: 1978 to 1982, 9:30243 (R;US)
JAPAN RESEARCH REACTOR-3
See JRR-3 REACTOR
JINR SYNCHROTRON
Coordinated Research Programs
Experiments in the field of relativistic nuclear physics at the Dubna synchrophasotron, 9:32064 (RA;HU)
Nuclear Medicine
Possibilities of JINR synchrophasotron application to medical and biological purposes, 9:31509 (R;XJ;In Russian)
Performance
Dubna synchrophasotron. Operation and improvement (quarter 3, 1982), 9:31474 (R;XJ;In Russian)
Radiobiology
Possibilities of JINR synchrophasotron application to medical and biological purposes, 9:31509 (R;XJ;In Russian)
JRR-3 REACTOR
Cover Gas
Performance of a nuclear reactor cover-gas monitor using charcoal-Ge gamma-ray spectrometer combination, 9:30829 (J;US)
Radiation Monitors
Performance of a nuclear reactor cover-gas monitor using charcoal-Ge gamma-ray spectrometer combination, 9:30829 (J;US)

K

K01
See KAONS NEUTRAL SHORT-LIVED
KAHL-MAIN REACTOR
See HDR REACTOR
KALKAR POWER REACTOR
See SNR-1 REACTOR
KAOLINITE
Chemical Reactions
Interactions of backfill materials with cesium in a bittern brine under repository conditions, 9:30371 (J;US)
Geochemistry
Geochemistry of the Dakota Formation of northwestern New Mexico: relevance to radioactive waste studies, 9:30365 (J;US)
Hydrothermal Alteration
Interactions of backfill materials with cesium in a bittern brine under repository conditions, 9:30371 (J;US)
KAON PLUS REACTIONS
Particle Production
Inclusive eta meson production by positive hadrons with the momentum of 10.5 GeV/c, 9:31984 (R;SU;In Russian)
Inclusive neutral pion production in interactions of positive particles with beryllium nuclei at 10.5 GeV/c, 9:31983 (R;SU;In Russian)
KAONIC ATOMS
Potentials
Low- and medium-energetic K^- p-interaction, 9:32034 (R;AT)
KAON-NUCLEON INTERACTIONS
Scattering
Low- and medium-energetic K^- p-interaction, 9:32034 (R;AT)
KAONS
Particle Production
Inclusive production of K^+-mesons in collisions between cold and hot nucleons, 9:32078 (RA;DE;In German)
KAONS 1
See KAONS NEUTRAL SHORT-LIVED
KAONS NEUTRAL SHORT-LIVED
Particle Production
Λ and Ksub(s)sup(o) production in central nucleus-nucleus interactions at 4.5 GeV/c momentum per nucleon, 9:32114 (RA;HU)
KETENES
Chemical Reactions
Characterization and chemistry of vinylketene prepared by flash vacuum pyrolysis. Study of the flash vacuum pyrolysis of hydroaromatic compounds: 5,8-diphenyltetralin and the parent and substituted 5,6,11,12-tetrahydrodibenzo[a,e]cyclooctenes. Revision 1, 9:31322 (R;US)
KEWAUNEE REACTOR
Radioactive Effluents
Atmospheric fluxes and geochemistries of stable Pb, Pb-210, and Po-210 in Crystal Lake, Wisconsin: Wisconsin power plant impact study, 9:31720 (R;US)
KINETICS EQUATIONS (REACTOR)
See REACTOR KINETICS EQUATIONS
KLYSTRONS
Phase Stability
Reference klystron output phase values for the first ten linac sectors, 9:31499 (R;US)
KNOCK-ON ELECTRONS
See ELECTRONS
KOREA (SOUTH)
See REPUBLIC OF KOREA
KRYPTON
Atom-Atom Collisions
Temperature dependence of the de-excitation rate constants of excited rare gas atoms by atoms and molecules, 9:31949 (RA;AT)
Electron Drift
Characteristic energy of low-energy electrons in Ne, Kr, and Xe gases, 9:31920 (RA;AT)
Ion-Molecule Collisions
Determination of resonant charge transfer cross sections by drift tube techniques, 9:31930 (RA;AT)
Muonic Atoms
μi charge exchange and muonium formation in low pressure gases, 9:31959 (R;CA)
KRYPTON 85
Radioecological Concentration
Environmental radiation data report 34, April-June 1983, 9:31691 (R;US)
KRYPTON IONS
Collisions
Influence of oxygen partial pressure on the sputtering on metastable Ca-atoms, 9:31892 (RA;AT)
Electron-Ion Collisions
Electron-impact double ionization of rare-gas ions, 9:31974 (J;US)
Ion-Molecule Collisions
Collisions of singly and doubly charged ions with oxygen molecules in the energy range 1 - 1800 (3600) eV, 9:31903 (RA;AT)
Determination of resonant charge transfer cross sections by drift tube techniques, 9:31930 (RA;AT)
KUOSHENG-1 REACTOR
Loss of Coolant
Hydrodynamic load measurements during safety/relief valve actuation at Kuosheng Plant, 9:30908 (RA;US)
Reactor Safety
Hydrodynamic load measurements during safety/relief valve actuation at Kuosheng Plant, 9:30908 (RA;US)

Relief Valves
Hydrodynamic load measurements during safety/relief valve actuation at Kuosheng Plant, 9:30908 (RA;US)
KUOSHENG-2 REACTOR
Loss of Coolant
Hydrodynamic load measurements during safety/relief valve actuation at Kuosheng Plant, 9:30908 (RA;US)
Reactor Safety
Hydrodynamic load measurements during safety/relief valve actuation at Kuosheng Plant, 9:30908 (RA;US)
Relief Valves
Hydrodynamic load measurements during safety/relief valve actuation at Kuosheng Plant, 9:30908 (RA;US)

L

LABORATORIES
Chemical Analysis
H-Coal pilot plant. Final report. Volumes IX and X, 9:30112 (R;US)
Equipment
H-Coal pilot plant. Final report. Volumes IX and X, 9:30112 (R;US)
On-Line Measurement Systems
Distributed intelligence versus central laboratory, 9:32410 (RA;AT)
Organizational Models
Distributed intelligence versus central laboratory, 9:32410 (RA;AT)
LABORATORY BUILDINGS
Underground Space
Los Alamos proposal for a National Underground Science Facility, 9:31393 (R;US)
LAGRANGE FIELD EQUATIONS
See LAGRANGIAN FIELD THEORY
LAGRANGIAN FIELD THEORY
Gauge Invariance
Some remarks on the implementation of gauge conditions, 9:32047 (RA;BR)
Quantization
Quantization of gauge-invariant theories through the Dirac-bracket formalism, 9:32048 (RA;BR)
Some remarks on the implementation of gauge conditions, 9:32047 (RA;BR)
LAKE MICHIGAN
Eutrophication
Radiological and Environmental Research Division: ecology. Annual report, January-December 1982, 9:31646 (R;US)
Water Pollution
Comparison of dynamic and mass-loading models used for long-term prediction of Lake Michigan water quality, 9:31704 (RA;US)
Water Quality
Ten-year forecasts of water quality in Lake Michigan using a deterministic model and Monte Carlo inputs, 9:31706 (RA;US)
LAKES
Acidification
Liming of acidified waters: a review of methods and effects on aquatic ecosystems. Final report, 9:31710 (R;US)
Water Quality
Water quality preservation measures in Lake Biwa, the largest lake in Japan, 9:31697 (R;US)
LAMBDA NEUTRAL
See LAMBDA PARTICLES
LAMBDA PARTICLES
Particle Production
Λ0 production from low energy antiproton annihilations in complex nuclei, 9:32094 (J;US)
Λ and Ksub(s)sup(o) production in central nucleus-nucleus interactions at 4.5 GeV/c momentum per nucleon, 9:32114 (RA;HU)
LAMINAR FLOW
Pulsed Neutron Techniques
Flow measurement in sodium and water using pulsed-neutron activation: Part 1, theory, 9:30775 (J;US)
LAMPF II SYNCHROTRON
Accelerator Facilities
Proceedings of the third LAMPF II workshop. Volume 1, 9:31991 (R;US)
Proceedings of the third LAMPF II workshop. Volume 2, 9:31992 (R;US)
Experiment Planning

LANTHANUM 129
Energy-Level Transitions
Study on the ^{129}Ce, ^{131}Ce and ^{131}Pr decay, 9:32118 (RA;SU;In Russian)
LANTHANUM 131
Beta-Plus Decay
Internal conversion electrons in sup(131)La decay, 9:32119 (RA;SU;In Russian)
Electron Capture Decay
Internal conversion electrons in sup(131)La decay, 9:32119 (RA;SU;In Russian)
Energy-Level Transitions
Study on the ^{129}Ce, ^{131}Ce and ^{131}Pr decay, 9:32118 (RA;SU;In Russian)
LANTHANUM 139 TARGET
Copper 65 Reactions
Evaporation decay and associated gamma multiplicity for ^{204}Rn via three fusion channels, 9:32144 (J;US)
LASER FUSION REACTORS
Design
Preliminary conceptual design of Siriu, A symmetric illumination, direct drive laser fusion reactor. Final report August 8, 1983-June 1, 1984, 9:32349 (R;US)
LASER ISOTOPE SEPARATION
Nuclear Materials Diversion
Risk assessment of alternative proliferation routes, 9:30406 (J;US)
Research Programs
Progress report: Chemistry and Materials Division, 1982 January 1 to March 31, 9:31330 (R;CA)
LASER RADIATION
Beam Optics
Beam deflecting optical switch using volumetric thermal gratings, 9:31632 (J;US)
LASER-PRODUCED PLASMA
Brillouin Effect
Studies of CO_2 laser interactions with plasmas. Final technical report, 1 January 1981-30 March 1983, 9:32348 (R;US)

Electron-Ring Accelerators
Interaction of laser plasma neutral componenta with a metal surface, 9:31475 (R;SU;In Russian)
Extreme Ultraviolet Radiation
Extreme ultraviolet spectra of highly ionized Ge, Kr and Mo emitted by imploding plasmas, 9:32345 (R;US)
Harmonics
How useful are odd-integer half-harmonics, 9:32347 (R;US)
Inertial Confinement
Ion sources for plasma filled ion diodes, 9:32387 (J;GB)
Strong ion coupling effects at high density of inertial confinement fusion plasmas, 9:32388 (J;GB)
Ion Plasma Waves
Studies of CO_2 laser interactions with plasmas. Final technical report, 1 January 1981-30 March 1983, 9:32348 (R;US)
Parametric Instabilities
Two-plasmon decay and three halves harmonic generation in filaments in a laser-produced plasma, 9:32332 (J;US)
Photon Emission
Two-plasmon decay and three halves harmonic generation in filaments in a laser-produced plasma, 9:32332 (J;US)
Plasmons
How useful are odd-integer half-harmonics, 9:32347 (R;US)
Raman Effect
New model of Raman spectra in laser produced plasma, 9:32346 (R;US)
Observation of scattered light between omega/2 and 3/2 omega in short wavelength laser produced plasmas, 9:32301 (R;US)
Sizeable Raman scatter in laser plasma experiments, 9:32335 (J;GB)

LASERS
Light Amplification by Stimulated Emission of Radiation.
See also FREE ELECTRON LASERS
GAS LASERS
X-RAY LASERS
Charged-Particle Reactions
Electron (and positron) acceleration with lasers, 9:31485 (BA;US)
Design
Apparatus for shifting the wavelength of light, 9:31413 (P;US)
Doppler Effect
Apparatus for shifting the wavelength of light, 9:31413 (P;US)
Mean-Field Theory
Quasiperiodicity in lasers with saturable absorbers, 9:31410 (J;US)
Power Demand
Assessment of materials-processing lasers. Final report, 9:31406 (R;US)
Uses
Assessment of materials-processing lasers. Final report, 9:31406 (R;US)
Wavelengths
Apparatus for shifting the wavelength of light, 9:31413 (P;US)

LATENT HEAT STORAGE
Feasibility Studies
Design and experiment of high-temperature tubular heat accumulator using the latent fusion heat of "Zamak 3" alloy, 9:30973 (R;FR;In French)

LATTICE FIELD THEORY
Gauge Invariance
New solutions of Euclidean SU(2) gauge theory, 9:32057 (J;US)
Phase Transformations
Effective-spin model for finite-temperature QCD, 9:32056 (J;US)
Renormalization
Lattice action forms stable under renormalization, 9:32058 (J;US)
Renormalized action improvements, 9:32044 (R;US)
SU-3 Groups
More than two static Su(3) charges on the lattice, 9:32055 (R;AT)
Wilson Loop
New solutions of Euclidean SU(2) gauge theory, 9:32057 (J;US)

LATTICES (REACTOR)
See REACTOR LATTICES

LEACHATES
Chemical Composition
Laboratory extraction method to simulate co-disposal of solid wastes in municipal waste landfills, 9:31684 (R;US)
Study about the behaviour of inorganic and organic pollutants in aerobic and anaerobic model landfills, 9:31688 (BA;US)
Dry Scrubbers
Leachate of dry scrubber wastes, 9:31467 (J;US)
Environmental Effects
Description of a standard leaching procedure for coal residues and waste materials, 9:30178 (R;NL;In Dutch)

LEACHING
Chemical Reaction Kinetics
Mechanisms that control aqueous leaching of nuclear waste glass, 9:30377 (J;US)
Sample Preparation
A criterion for selecting leach test specimen sizes, 9:30381 (J;US)

LEAD
Absorption Spectroscopy
Four-rod carbon rod atomizer for atomic absorption spectrometry, 9:31634 (J;US)
Antiproton Reactions
Λ0 production from low energy antiproton annihilations in complex nuclei, 9:32094 (J;US)
Biological Effects
Influence of lead on the immun defense against tumor cells: 'In vitro-experiment with the LMC-test', 9:31810 (R;DE;In German)
Carbon 12 Reactions
Deuteron inclusive spectra from collisions of ^{12}C with different targets at 3.6 GeV/nucl., 9:32079 (RA;HU)
Energy Absorption
Effect of fluorescence, bremsstrahlung, and annihilation radiation on the spectra and energy deposition of gamma rays in bulk media, 9:30802 (J;US)
Health Hazards
Health hazard evaluation report No. HETA 80-234-1196, Master Metals, Incorporated, Cleveland, Ohio, 9:31812 (R;US)
Immune Reactions
Influence of lead on the immun defense against tumor cells: 'In vitro-experiment with the LMC-test', 9:31810 (R;DE;In German)
Material Balance
Elemental partitioning in ash depositories and material balances for a coal burning facility by spark source mass spectrometry, 9:30167 (J;US)
Photonuclear Reactions
Energy spectra of positrons and electrons produced in lead target by bremsstrahlung beam, 9:32141 (RA;SU;In Russian)
Radiation Effects
Effect of fluorescence, bremsstrahlung, and annihilation radiation on the spectra and energy deposition of gamma rays in bulk media, 9:30802 (J;US)
Toxicity
Health hazard evaluation report No. HETA 80-234-1196, Master Metals, Incorporated, Cleveland, Ohio, 9:31812 (R;US)

LEAD 207 TARGET
Proton Reactions
Cumulative production of tritium, ^{3}He, ^{4}He nuclei, 9:32089 (R;XJ;In Russian)

LEAD 208
Fission Barrier
Fission barriers of compressed nuclei, 9:32138 (RA;DE)
Particle-Hole Model
Microscopic look at the nuclear twist, 9:32126 (J;US)

LEAD 208 TARGET
Argon 40 Reactions
Search for flow in the reaction Ar+Pb, 9:32140 (RA;HU)
Oxygen 16 Reactions
Inelastic excitation of giant resonances by 400-MeV ^{16}O, 9:32145 (J;US)

LEAD 210
Radioecological Concentration
Atmospheric fluxes and geochemistries of stable Pb, Pb-210, and Po-210 in Crystal Lake, Wisconsin: Wisconsin power plant impact study, 9:31720 (R;US)
LEAD ZIRCONITE TITANATE
See PZT
LEAD-ACID BATTERIES
Testing
Analysis of lead-acid battery deep-cycle accelerated testing data, 9:30982 (R;US)

LIGNITE
Ash Content
Radiometric determination of ash content of raw lignites, 9:31564 (RA;SU)
Simplified mathematical model for scattered transmission of X-rays in raw brown coal, 9:31565 (RA;SU)
Ashes
Distribution of inorganics in low-rank coals (Includes possible associations for many elements), 9:30157 (R;US)
Combustion
Combustion research and ash fouling for low-rank coals, 9:30215 (R;US)
Fischer-Tropsch Synthesis
Synthetic fuel production using Texas lignite and a very high temperature reactor for process heat, 9:30748 (J;US)
Lurgi Process
Synthetic fuel production using Texas lignite and a very high temperature reactor for process heat, 9:30748 (J;US)
Radiometric Gages
Compensation for thickness variations in determining the bulk material composition on conveyor belts using combined scatter-transmission and thickness measuring methods, 9:30423 (RA;SU)
Research Programs
Lignite research in North Dakota, 9:30097 (R;US)
Structural Chemical Analysis
Supercritical solvent extraction, 9:30115 (R;US)
Supercritical Gas Extraction
Supercritical solvent extraction, 9:30115 (R;US)
LIMING
Cost
Liming of acidified waters: a review of methods and effects on aquatic ecosystems. Final report, 9:31710 (R;US)
Environmental Effects
Liming of acidified waters: a review of methods and effects on aquatic ecosystems. Final report, 9:31710 (R;US)
Optimization
Liming of acidified waters: a review of methods and effects on aquatic ecosystems. Final report, 9:31710 (R;US)
LIMITERS
Impurities
Characterization of impurities deposited on the PDX graphite rail limiter, 9:32365 (R;US)
LINACS
See LINEAR ACCELERATORS
LINDANE
Soil Chemistry
Radiotracer studies on the degradation and dissipation of lindane under Malaysian environment. Part of a coordinated programme on the fate of persistent pesticides in the tropics, using radioisotopes. Final report for the period 1 September 1982 - 31 August 1983, 9:31743 (R;AT)
LINEAR ACCELERATORS
See also HILACS
LAMPF LINAC
QUADRUPOLE LINACS
STANFORD LINEAR COLLIDER

Beam Dynamics
Increasing of beam intensity in multisectional electron accelerator, 9:31491 (RA;SU;In Russian)
Beam Monitoring
Technique of noncontact measuring of mean beam current at the 300 MeV electron linear accelerator, 9:31490 (RA;SU;In Russian)
Beam Transport
Experimental investigation of certain beam transport issues in a pulsed transmission line linear accelerator, 9:31495 (R;US)
Feasibility Studies
Future accelerators using micro-fabrication technology, 9:31469 (R;US)
Kilo Amp Beam Currents
High current electron linacs (advanced test accelerator/experimental test accelerator), 9:31481 (R;US)
Neutron Sources
Modernization of pulsed thermal neutron source for the "Fakel" accelerator, 9:31473 (RA;SU;In Russian)
Performance
High current electron linacs (advanced test accelerator/experimental test accelerator), 9:31481 (R;US)

LINEAR Z PINCH DEVICES
High density Z pinch as a small low-energy fusion device, 9:32358 (R;US)
Plasma Diagnostics
Nonthermal effects on the diagnostics of a collapsing gas shell Z-pinch, 9:32317 (R;US)

LIOUVILLE EQUATION
See BOLTZMANN-VLASOV EQUATION

LIPIDS
Energy Yield
Economics of production of microalgae in high intensity mass culture, as a new source of fuel oils, 9:30480 (J;US)
Production
Program element: aquatic species, 9:30516 (RA;US)

LIQUID FUELS
See also FUEL OILS
GASOLINE
LIQUID METAL FUELS
Fuel Substitution
Combustion of alternate liquid fuels in high efficiency boilers, 9:31459 (J;US)
Production
Transportation fuels from wood, 9:30479 (J;US)

LIQUID IONIZATION CHAMBERS
Time Resolution
Time resolution of liquid argon detectors. Part 1. Optimal filter, 9:31543 (R;SU;In Russian)

LIQUID METAL FUELS
Fuel Cycle
Metallic combinations of Pu-Th and ^{233}U-Th or Pu-Th and ^{233}U-^{233}U fuel cycles as possible alternatives to (Pu-U)O_2 in LMFBRS, 9:30780 (J;US)

LIQUID METAL TEST FACILITIES
See TEST FACILITIES

LIQUID SCINTILLATION DETECTORS
Errors
Investigation of false pulses in scintillator counter with liquid scintillator, 9:31546 (RA;SU;In Russian)
Performance Testing
Benchscale experiments at the "Neutrino detector" installation. ND-1, 9:31535 (R;SU;In Russian)
Reliability
Investigation of false pulses in scintillator counter with liquid scintillator, 9:31546 (RA;SU;In Russian)

LIQUIDS
See also COAL LIQUIDS
Electron Mobility
Electron transport in liquids: effect of unbalancing the methane molecule by deuteration, 9:31321 (RA;AT)
Thermodynamic Properties
Coal conversion systems technical data book, 9:30155 (R;US)

LITHIUM
Optical Pumping
Optically pumped polarized alkali atomic beams and targets, 9:31875 (R;US)
Passivation
Passivation of lithium in acetonitrile solutions of SO_2, 9:31047 (J;US)

LITHIUM 6 TARGET
Electron Reactions
Space parity nonconservation in excitation of nuclei in a process of electron bremsstrahlung, 9:32085 (RA;SU;In Russian)
M1-Transitions
Space parity nonconservation in excitation of nuclei in a process of electron bremsstrahlung, 9:32085 (RA;SU;In Russian)
Pion Plus Reactions
Energy dependence of the ^{6}Li(π^+,^{3}He)^{3}He reaction at 60, 75 and 90 MeV, 9:32091 (R;CA)

LITHIUM 7 TARGET
Alpha Reactions
Resonant alpha capture by ^{7}Be and ^{7}Li, 9:32093 (J;US)

LITHIUM CHLORIDES
Physical Radiation Effects
Study of the electronic structure of radiation defects in crystals KCl:LiCl, 9:31257 (RA;SU;In Russian)

LITHIUM COMPOUNDS
See also LITHIUM OXIDES
Crystal Structure
Fe^{3+} octahedral-site properties in ordered $LiAl_5O_8$, 9:31233 (R;BR)
Fluorescence
Fe^{3+} octahedral-site properties in ordered $LiAl_5O_8$, 9:31233 (R;BR)
Optical Properties
Second harmonic generation in $LiNbO_3$ crystals with periodic laminar ferroelectric domains, 9:31274 (TJ;US)
X-Ray Diffraction
Fe^{3+} octahedral-site properties in ordered $LiAl_5O_8$, 9:31233 (R;BR)

LITHIUM FLUORIDES
Atom Collisions
Scattering of ^{20}Ne atoms from the (001) face of LiF, 9:31900 (RA;AT)
Crystal Defects
Beam-exposure dependence and mechanisms of photon-stimulated desorption from alkali fluorides, 9:31269 (J;US)
Electronic Structure
Beam-exposure dependence and mechanisms of photon-stimulated desorption from alkali fluorides, 9:31269 (J;US)
Physical Radiation Effects
Semiempirical calculations of electronic structure of quasi-molecular centers in LiF crystals, 9:31256 (RA;SU;In Russian)
Radiative Cooling
Radiative cooling with MgO and/or LiF layers, 9:31273 (J;US)
Reflective Coatings
Radiative cooling with MgO and/or LiF layers, 9:31273 (J;US)
Sorptive Properties
Beam-exposure dependence and mechanisms of photon-stimulated desorption from alkali fluorides, 9:31269 (J;US)
Spectral Reflectance
Radiative cooling with MgO and/or LiF layers, 9:31273 (J;US)
Surface Properties
Interactions of molecules with surfaces. Progress report, February 1, 1983-January 31, 1984, 9:31248 (R;US)

LITHIUM IONS
Collisions
Band structure in high energy ion beam surface interaction at grazing incidence, 9:31890 (RA;AT)
Desorption
Beam-exposure dependence and mechanisms of photon-stimulated desorption from alkali fluorides, 9:31269 (J;US)
Diffusion
Calculation of ion drift and diffusion: basis set expansions with non-gaussian weight functions, 9:31936 (RA;AT)
Diffusion of lithium ions in argon, 9:31939 (RA;AT)
Ion-Atom Collisions
Diffusion of lithium ions in argon, 9:31939 (RA;AT)

Ion-Molecule Collisions
Energy dependence of the clustering reactions of Li^+ ions with some atmospheric gases, 9:31923 (RA;AT)
Mobility of Li^+ and K^+ ions in helium and argon at 294 and 80 K and derived interaction potentials, 9:31938 (RA;AT)
Slowing-Down
Examination of the density dependence of the slowing-down cross section of liquid ethane for ^{7}Li-projectiles, 9:32241 (R;DE;In German)

LITHIUM OXIDES
Corrosion Products
Lithium oxide in Li(Si)/FeS2 thermal batteries, 9:30987 (J;US)

LITHIUM-SULFUR BATTERIES
Corrosion
Corrosion reactions in lithium sulfur dioxide cells, 9:30986 (J;US)

LIXIVIATION
See LEACHING

LMFBR TYPE REACTORS
See also BELOYARSK-3 REACTOR
CLINCH RIVER BREEDER REACTOR
EBR-2 REACTOR
SNR-1 REACTOR
ATWS
The effects of sodium entrainment and heat transfer with two-phase UO_2 during a hypothetical core disruptive accident, 9:30967 (J;US)
Boiling
Donor flow formulation for momentum flux differencing, 9:30765 (R;US)
Breeding Blankets
Optimization of a variable flow allocation scheme in heterogeneous liquid-metal fast breeder reactors, 9:30781 (J;US)
Coolant Loops
Design and operation of a rapid thermal transient component testing sodium loop, 9:30763 (R;US)
Fuel Element Clusters
Evaluation of the SLSF P2 loss-of-flow safety experiment, 9:30965 (J;US)
Fuel Management
Optimization of a variable flow allocation scheme in heterogeneous liquid-metal fast breeder reactors, 9:30781 (J;US)
The role of plutonium-238 in nuclear fuel cycles, 9:30711 (J;US)
Fuel Pins
Combination of fuel-cladding chemical and mechanical interactions in mixed oxide fuel pins, 9:30779 (J;US)
Mol-7B-an 18-pin bundle operating 200 days beyond breach, 9:30776 (J;US)
Fuel Rods
Modeling of carbide fuel rods, 9:30772 (J;US)
Liquid Metal Fuels
Metallic combinations of Pu-Th and ^{233}U-Th or Pu-Th and ^{233}U-^{233}U fuel cycles as possible alternatives to $(Pu-U)O_2$ in LMFBRS, 9:30780 (J;US)
Loss of Flow
Evaluation of the SLSF P2 loss-of-flow safety experiment, 9:30965 (J;US)
Simulations of loss-of-flow accidents in an LMFBR with the Sodium Loop Safety Facility, 9:30958 (J;US)
The effects of sodium entrainment and heat transfer with two-phase UO_2 during a hypothetical core disruptive accident, 9:30967 (J;US)
Mixed Carbide Fuels
Modeling of carbide fuel rods, 9:30772 (J;US)
Mixed Oxide Fuels
Combination of fuel-cladding chemical and mechanical interactions in mixed oxide fuel pins, 9:30779 (J;US)
Metallic combinations of Pu-Th and ^{233}U-Th or Pu-Th and ^{233}U-^{233}U fuel cycles as possible alternatives to $(Pu-U)O_2$ in LMFBRS, 9:30780 (J;US)
Nuclear Materials Diversion
Risk assessment of alternative proliferation routes, 9:30406 (J;US)
Primary Coolant Circuits
Sodium flow blockage in liquid-metal fast breeder reactors: sweepout of a planar blockage, 9:30966 (J;US)
Reactor Accidents
Advanced reactor safety research quarterly report, October-December 1982. Volume 24, 9:30930 (R;US)
Two-field and drift-flux models with applications to nuclear reactor safety, 9:30733 (R;US)
Reactor Cooling Systems
Flow measurement in sodium and water using pulsed-neutron activation: Part 2, experiment, 9:30774 (J;US)
Heat transfer and pressure drop in sodium boiling in tubes, 9:30969 (J;US)
Reactor Core Disruption
Application of sodium-concrete reaction data on breeder-reactor safety analysis, 9:30959 (J;US)
Boiling and dryout predictions in postaccident heat removal situations, 9:30771 (J;US)
The effects of sodium entrainment and heat transfer with two-phase UO_2 during a hypothetical core disruptive accident, 9:30967 (J;US)
Reactor Cores
A fast reactor core concept using an internal blanket, 9:30782 (J;US)
DIF3D: a code to solve one-, two-, and three-dimensional finite-difference diffusion theory problems, 9:30761 (R;US)
Optimization of a variable flow allocation scheme in heterogeneous liquid-metal fast breeder reactors, 9:30781 (J;US)
Sodium flow blockage in liquid-metal fast breeder reactors: sweepout of a planar blockage, 9:30966 (J;US)
The role of plutonium-238 in nuclear fuel cycles, 9:30711 (J;US)
Reactor Kinetics
DIF3D: a code to solve one-, two-, and three-dimensional finite-difference diffusion theory problems, 9:30761 (R;US)
The role of plutonium-238 in nuclear fuel cycles, 9:30711 (J;US)
Reactor Materials
Heat treatment of 2 1/4 Cr–1 Mo steel for breeder reactor steam generators, 9:30777 (J;US)
U.S. fast reactor materials and structures program, 9:30762 (R;US)
Reactor Safety Experiments
Parameter estimation of liquid-metal fast breeder reactor simulation experiments using univariate autoregressive integrated moving average modeling, 9:30968 (J;US)
Research Programs
U.S. fast reactor materials and structures program, 9:30762 (R;US)
Valves
Diffusion bonding resistant valve development for sodium service, 9:30764 (R;US)

LNG SPILLS
See GAS SPILLS

LOAD ANALYSIS
Selected statistical methods for analysis of load research data. Final report, 9:31036 (R;US)
Forecasting
Regional load-curve models. Volume 5. Data base. Final report, 9:31034 (R;US)

LOAD CHARACTERISTICS
See LOAD ANALYSIS

LOAD MANAGEMENT
Meetings
Workshop proceedings: planning and assessment of load management, 9:31035 (R;US)
Research Programs
1983 survey of utility end-use projects. Final report, 9:31108 (R;US)

LOADING (REACTOR)
See REACTOR FUELING

LOAM
Soil Chemistry
Comparison of soil-water and groundwater quality of two reconstructed soil systems exposed to ambient precipitation, 9:31683 (RA;US)
LOCA
See LOSS OF COOLANT
LOFT REACTOR
Engineered Safety Systems
Safety monitoring in process and control, 9:30824 (R;US)
Flow Rate
Development of drag disk and turbines at the INEL, 9:30846 (R;US)
Loss of Coolant
Computer studies on the influence of some scaling distortions on the results of an intermediate break in LOFT reactor, 9:30893 (RA;US)
Reactor Control Systems
Safety monitoring in process and control, 9:30824 (R;US)
Reactor Instrumentation
Development of drag disk and turbines at the INEL, 9:30846 (R;US)
Reactor Protection Systems
Safety monitoring in process and control, 9:30824 (R;US)
Transients
RELAP5 assessment: LOFT large break L2-5, 9:30935 (R;US)
LONGITUDINAL PINCH DEVICES (LINEAR)
See LINEAR Z PINCH DEVICES
LONGWALL MINING
Chain Conveyors
Operational experiences with the roller curve, 9:30203 (R;DE;In German)
Shearer Loaders
Technical progress report No. 33 USBM contract JO318097; FMI-BMI-8148, April 1-April 30, 1984, 9:30199 (R;US)
Stowing
Pneumatic packing with blowing wall, 9:30206 (R;DE;In German)
Strata Control
Pneumatic packing with blowing wall, 9:30206 (R;DE;In German)

LOSS OF COOLANT
Blowdown
Omega tests: blowdown of a 36 rod bundle, 9:30906 (RA;US)
SOLA-LOOP analysis of a back pressure check valve, 9:30878 (R;US)
Computer Codes
Reflood code development work in JAERI, 9:30891 (RA;US)
Computerized Simulation
Scaling laws of transient heat and mass flow for modeling the loss of coolant accident, 9:30964 (J;US)
Critical Flow
Two-field and drift-flux models with applications to nuclear reactor safety, 9:30733 (R;US)
Dryout
Two-region vapor generation rate model for convective film boiling, 9:30951 (R;US)
ECCS
Review of flooding experiments with blocked arrays (FEBA) blockage data, 9:30895 (RA;US)
Flow Blockage
COBRA-TF: flow blockage heat transfer program, 9:30896 (RA;US)
Review of flooding experiments with blocked arrays (FEBA) blockage data, 9:30895 (RA;US)
Fluid-Structure Interactions
Two-field and drift-flux models with applications to nuclear reactor safety, 9:30733 (R;US)
Heat Transfer
COBRA-TF: flow blockage heat transfer program, 9:30896 (RA;US)
Experimental data report on condensation in a single inverted U-tube (PWR), 9:30871 (R;US)
Forced convective, nonequilibrium post-CHF heat transfer experiment: description, data analysis and correlation comparison, 9:30866 (R;US)
Influence of partial blockage of a BWR bundle on heat transfer, cladding temperature, and quenching during bottom flooding or top spraying under simulated LOCA conditions, 9:30709 (J;US)
Measurement of grid spacer's enhanced droplet cooling under reflood condition in a PWR by LDA, 9:30897 (RA;US)
Modelling of simulated clad ballooning blockages in the THETIS Rig at AEE Winfrith, 9:30901 (RA;US)
Omega tests: blowdown of a 36 rod bundle, 9:30906 (RA;US)
Reflooding of a PWR bundle: Pericles programme and first results, 9:30905 (RA;US)
Scaling laws of transient heat and mass flow for modeling the loss of coolant accident, 9:30964 (J;US)
Some salient results of LOBI-MOD1 tests, and programme plans for LOBI-MOD2 facility, 9:30889 (RA;US)
Two-region vapor generation rate model for convective film boiling, 9:30951 (R;US)
HPCI
Transient thermal mixing in a full-height PWR cold leg and downcomer. Final report, 9:30872 (R;US)
Hydraulics
Experimental data report on condensation in a single inverted U-tube (PWR), 9:30871 (R;US)
Influence of partial blockage of a BWR bundle on heat transfer, cladding temperature, and quenching during bottom flooding or top spraying under simulated LOCA conditions, 9:30709 (J;US)
Modelling of simulated clad ballooning blockages in the THETIS Rig at AEE Winfrith, 9:30901 (RA;US)
Omega tests: blowdown of a 36 rod bundle, 9:30906 (RA;US)
Reflooding of a PWR bundle: Pericles programme and first results, 9:30905 (RA;US)
Scaling laws of transient heat and mass flow for modeling the loss of coolant accident, 9:30964 (J;US)
Some salient results of LOBI-MOD1 tests, and programme plans for LOBI-MOD2 facility, 9:30889 (RA;US)
Hydrogen
Hydrogen transport, mixing, and combustion studies, 9:30879 (R;US)
Reactor Safety Experiments
Steam line break, jet pump drive line break and natural circulation tests in ROSA-III program for BWR LOCA/ECCS integral tests, 9:30892 (RA;US)
Simulation
Application of a thermocouple-correlation-type transit-time flowmeter in a pressurized water reactor environment, 9:30869 (R;US)
BWR full integral simulation test (FIST) pretest predictions with TRACBO2, 9:30890 (RA;US)
Test Facilities
Experimental data report on condensation in a single inverted U-tube (PWR), 9:30871 (R;US)
LOSS OF FLOW
Fission Product Release
Transient fission gas release during direct electrical heating experiments, 9:30860 (R;US)
Heat Transfer
Evaluation of the SLSF P2 loss-of-flow safety experiment, 9:30965 (J;US)
The effects of sodium entrainment and heat transfer with two-phase UO_2 during a hypothetical core disruptive accident, 9:30967 (J;US)
Hydraulics
Evaluation of the SLSF P2 loss-of-flow safety experiment, 9:30965 (J;US)
The effects of sodium entrainment and heat transfer with two-phase UO_2 during a hypothetical core disruptive accident, 9:30967 (J;US)
Simulation
Simulations of loss-of-flow accidents in an LMFBR with the Sodium Loop Safety Facility, 9:30958 (J;US)

Test Facilities
Evaluation of the SLSF P2 loss-of-flow safety experiment, 9:30965 (J;US)
LOSS OF FLUID TEST REACTOR

Radiation Detection
Zero-quantum superconducting magnetic shield, 9:31392 (R;US)
Research Programs
High energy physics research at Texas A & M University. Annual progress report, January 1, 1983-December 31, 1983, 9:31981 (R;US)
MAGNETIC SHIELDING
Design
Zero-quantum superconducting magnetic shield, 9:31392 (R;US)
MAGNETIC SPECTROMETERS
Electromagnets
Magnetic induction distribution in the JINR-IHEP neutrino detector magnetic shell and evaluation of scattering magnetic fields, 9:31608 (RA;XJ;In Russian)
Magnetic system of the JINR-IHEP neutrino detector for Serpukhov synchrotron, 9:31607 (RA;XJ;In Russian)
Magnetic Fields
Measurement and analytic representation of the magnetic field of 6-m ITEP spectrometer, 9:31626 (R;SU;In Russian)
On-Line Measurement Systems
Measurement and analytic representation of the magnetic field of 6-m ITEP spectrometer, 9:31626 (R;SU;In Russian)
MAGNETIC TAPES
Gamma Cascades
Perturbation of gamma-gamma angular correlations in magnetic-tape carriers, 9:31612 (R;SU;In Russian)
MAGNETOHYDRODYNAMICS
Cascade Theory
Long-time states of inverse cascades in the presence of a maximum length scale, 9:31978 (J;GB)
Dissipation Factor
Long-time states of inverse cascades in the presence of a maximum length scale, 9:31978 (J;GB)
MAGNETOSPHERE
Solar Wind
Suprathermal ions upstream of the earth's bow shock, 9:31870 (R;US)
MAHOGANY TREES
See TREES
MAINE
Geologic Deposits
Geology, hydrology, and mineral resources of crystalline rock areas of the northeastern United States. Part 2, 9:31827 (R;US)
Geology
Geology, hydrology, and mineral resources of crystalline rock areas of the northeastern United States, 9:31826 (R;US)
Hydrology
Geology, hydrology, and mineral resources of crystalline rock areas of the northeastern United States, 9:31826 (R;US)
Mineral Resources
Geology, hydrology, and mineral resources of crystalline rock areas of the northeastern United States, 9:31826 (R;US)
MAIZE
Mitochondria
Helminthosporium maydis T toxin decreased calcium transport into mitochondria of susceptible corn, 9:31747 (J;US)
MALIGNANCIES
See NEOPLASMS
MAMMARY GLANDS
Neoplasms
Studies of cancer incidence in the life-span study sample: example of breast cancer, 9:31771 (RA;US)
MANGANESE ALLOYS
See also HEUSLER ALLOYS
MANGANESE BASE ALLOYS
STAINLESS STEEL-21-6-9
Neutron Diffraction
Spin correlations and reentrant spin-glass behavior in amorphous Fe-Mn alloys. II. Dynamics, 9:31211 (J;US)
Spin Glass State
Spin correlations and reentrant spin-glass behavior in amorphous Fe-Mn alloys. II. Dynamics, 9:31211 (J;US)
MANGANESE BASE ALLOYS
Electric Conductivity
Thermopower and resistivity in amorphous Mg sub(1-x) Zn sub(x) alloys, 9:31160 (RA;BR)
MANGANESE COMPOUNDS
Laves Phases
5f-electrons in uranium laves-phase compounds. Photoemission from UMn_2, UFe_2, UCo_2, UFeNi, UOs_2 and UIr_2, 9:31180 (RA;IL)
Photoemission
5f-electrons in uranium laves-phase compounds. Photoemission from UMn_2, UFe_2, UCo_2, UFeNi, UOs_2 and UIr_2, 9:31180 (RA;IL)
MANIPULATORS
Control Equipment
Optimum design of electric motor for multilink manipulator, 9:31375 (R;US)
Control Systems
Design and fabrication of a four degree-of-freedom force feedback planar manual controller, 9:31378 (R;US)
Electric Motors
Optimum design of electric motor for multilink manipulator, 9:31375 (R;US)

Remote Control
Kinematic control of a robotic manipulator with a unilateral manual controller, 9:31379 (R;US)

MANITOBA
Radiometric Surveys
Airborne radiometric anomalies caused by late kinematic granite rocks in the Molson Lake-Red Sucker Lake area, east-central Manitoba, 9:31839 (RA;CA)

MANOMETERS
See PRESSURE GAGES

MANUFACTURING FACILITIES
See INDUSTRIAL PLANTS

MAPS
Image Processing
Image processing of coincident binary patterns from geological and geophysical maps of mineralized areas, 9:31840 (RA;CA)

MARICULTURE
See AQUACULTURE

MARINAS
Radiometric Surveys
Radiological survey of Ingalls Shipbuilding Division, Pascagoula, Mississippi, and environs, 9:31692 (R;US)

MARINE DISPOSAL
Environmental Effects
Survey of the marine benthic infauna collected from the United States radioactive waste disposal sites off the Farallon Islands, California. Final report, 9:30349 (R;US)
Environmental Impacts
Environmental assessment methodologies for sea dumping of radioactive wastes. Report based on the joint IAEA/IMO technical committee meeting on environmental assessment methodologies for sea dumping of radioactive wastes in co-operation with UNEP held in Vienna, 30 August - 3 September 1982, 9:30385 (R;AT)
Feasibility Studies
NEA Seabed Working Group status on site qualification for nuclear waste disposal within deep-sea sediment, 9:30355 (R;US)
Site Selection
NEA Seabed Working Group status on site qualification for nuclear waste disposal within deep-sea sediment, 9:30355 (R;US)

MARINE ECOSYSTEMS
See AQUATIC ECOSYSTEMS

MARSHALL ISLANDS
Radiation Monitoring
Protracted exposure to fallout: the Rongelap and Utirik experience, 9:31793 (J;GB)

MARSHES
Ecology
Ecology of tidal marshes of the Pacific Northwest Coast: a community profile, 9:31699 (R;US)
Ecology of San Francisco Bay tidal marshes: a community profile, 9:31700 (R;US)

MARYLAND
Hydrology
Hydrology of Area 6, Eastern Coal Province, Maryland, West Virginia, and Pennsylvania, 9:30190 (R;US)
Land Use
Evaluation of four completed small watershed projects: South Carolina, Maryland, Idaho-Nevada, and West Virginia. Agricultural economic report, 9:31006 (R;US)

MASS SPECTROMETERS
Operation
Physical principles and design of the ATOS device, 9:31950 (RA;SU;In Russian)

MASS SPECTROSCOPY
Pulsed-laser atom-probe studies of surface chemical reactions, 9:31315 (R;US)
Magnetrons
Base principles of high-current mass-spectrometry, 9:31625 (RA;SU;In Russian)
Mass Resolution
Base principles of high-current mass-spectrometry, 9:31625 (RA;SU;In Russian)
Sample Preparation
Improvement of the analytic results of thermal ionization mass spectrometry through electrolytic sample deposition: application of plutonium, 9:31306 (TJ;US)

MASS TRANSFER
See also ENVIRONMENTAL TRANSPORT
Measuring Methods
Mass and heat transfer in crushed oil shale, 9:30273 (R;US)
Scaling Laws
Scaling laws of transient heat and mass flow for modeling the loss of coolant accident, 9:30964 (J;US)

MASS TRANSIT SYSTEMS
Emergency Plans
Transportation energy contingency planning: transit fuel supplies under decontrol, 9:31073 (R;US)
Transportation energy management: current transit operator activities, 9:31076 (R;US)
Transportation energy contingency planning: taxi and school bus use in Dallas-Fort Worth, 9:31075 (R;US)
Energy Conservation
Transportation energy management: transit operator facilities. Volume I. Office Guide, 9:31062 (R;US)
Transportation energy management: current transit operator activities, 9:31076 (R;US)
Energy Management
Transportation energy management: current transit operator activities, 9:31076 (R;US)
Fuel Supplies
Transportation energy management: fuel futures, 9:31079 (R;US)
Transportation energy contingency planning: transit fuel supplies under decontrol, 9:31073 (R;US)
Transportation energy management: current transit operator activities, 9:31076 (R;US)
Transportation energy contingency planning: taxi and school bus use in Dallas-Fort Worth, 9:31075 (R;US)

MASSACHUSETTS
Abandoned Sites
Formerly utilized MED/AEC sites remedial action program. Radiological survey of the former Watertown arsenal property, Site 34 and Site 41, Watertown, Massachusetts, 9:30320 (R;US)
Geologic Deposits
Geology, hydrology, and mineral resources of crystalline rock areas of the northeastern United States. Part 2, 9:31827 (R;US)
Geology
Geology, hydrology, and mineral resources of crystalline rock areas of the northeastern United States, 9:31826 (R;US)
Hydrology
Geology, hydrology, and mineral resources of crystalline rock areas of the northeastern United States, 9:31826 (R;US)
Mineral Resources
Geology, hydrology, and mineral resources of crystalline rock areas of the northeastern United States, 9:31826 (R;US)

MATERIALS (SEMICONDUCTOR)
See SEMICONDUCTOR MATERIALS
MATERIALS TESTING
Data Acquisition Systems
Data acquisition and analysis system for fiber creep testing, 9:31426 (R;US)
Experimental Data
H-Coal pilot plant. Final report. Volume VII. Materials evaluation, 9:30110 (R;US)
Synchrotron Radiation
Application of synchrotron radiation to problems in materials science. Proceedings, 9:31141 (R;GB)
MATHEMATICAL MODELS
See also FLOW MODELS
NUCLEAR MODELS
Comparative Evaluations
Hazard function modelling for dose-response analysis of cancer incidence in the A-bomb survivor data, 9:31769 (RA;US)
Regression Analysis
Variance and regression analyses of Moyer model parameter data and their variation with primary proton energy, 9:31792 (J;GB)
MATRICES
Analytical Solution
Identification of necessary and sufficient conditions for real non-negativeness of rational matrices, 9:32411 (R;IT)
MEA
Toxicity
Chemosensitization in vitro: on the mechanism of the preincubation effect of hypoxic cell sensitizers, 9:31805 (RA;US)
MEASURED VALUES
See DATA
MEASURING INSTRUMENTS
Use of a more specific term is recommended.

WEIGHT INDICATORS
Design
Development of a simple wind speedometer for application in countries of the developing world, 9:30593 (R;DE;In German)
Fabrication
Commercially available instrumentation versus custom-made equipment: A guide, 9:31541 (RA;AT)
Nuclear instrumentation in a Hungarian Research Institute for Physics, 9:31540 (RA;AT)
Operation
Development of a simple wind speedometer for application in countries of the developing world, 9:30593 (R;DE;In German)
Performance Testing
H-Coal Pilot Plant. Volume VI. 4.0 - equipment performance: 4.12 - pressure safety valves, 4.13 - instrumentation, 4.14 - process piping systems, 4.15 - hydrogen compressors. Final report, 9:30109 (R;US)
Procurement
Commercially available instrumentation versus custom-made equipment: A guide, 9:31541 (RA;AT)
MEAT INDUSTRY
Energy Conservation
Energy conservation in meat, poultry, and dairy processing. Final report: development of a proposed conference series, 9:31086 (R;US)
MEDICAL PERSONNEL
See also RADIOLOGICAL PERSONNEL
Radiation Protection Laws
Radiation hazard control in hospitals. Training manual I, 9:31734 (R;CA)
MEDITERRANEAN SEA
Water Currents
Discussion of the Ionian and Levantine Seas, NATO workshop on atmospheric and oceanic circulation in the Mediterranean basin, 9:31698 (R;US)
MELT REFINING PROCESS
See PYROCHEMICAL REPROCESSING
MEMORY DEVICES
See also SEMICONDUCTOR STORAGE DEVICES
Flowsheets
Buffer memory unit for time measurements at critical assemblies, 9:31534 (R;SU;In Russian)
MENTAL DISORDERS
Radioinduction
Statistical methods in various special studies at RERF, 9:31773 (RA;US)
MERCAMINE
See MEA
MERCAPTOETHYLAMINE
See MEA
MERCURY
Abundance
Targeting geothermal exploration sites in the Mount St. Helens area using soil mercury surveys, 9:30579 (R;US)
Corrosive Effects
Effect of feed gas trace components on the SRC-I hydrogen purification unit. Final technical report, 9:30133 (R;US)
Material Balance
Elemental partitioning in ash depositories and material balances for a coal burning facility by spark source mass spectrometry, 9:30167 (J;US)
Metabolism
Metabolic models for methyl and inorganic mercury, 9:31815 (J;GB)
Removal
Effect of feed gas trace components on the SRC-I hydrogen purification unit. Final technical report, 9:30133 (R;US)
MERCURY 204 TARGET
Triton Reactions
3291-keV J/sup π/ = $(25/2)^+$ level in ^{205}Tl, 9:32143 (J;US)
MESON FACTORIES

Annealing
Positron prevacancy effects in pure annealed metals, 9:31219 (BA;NL)
Corrosion
Corrosion in atmospheric fluidized bed combustors--the reactions of $CaSO_4$ with Cr, Ni, Co, Fe, and several alloys, 9:31214 (J;US)
Oxidation
Corrosion in atmospheric fluidized bed combustors--the reactions of $CaSO_4$ with Cr, Ni, Co, Fe, and several alloys, 9:31214 (J;US)
Positron Computed Tomography
Design considerations for positron transmission tomograph used for non-medical applications, 9:31427 (J;US)
Sulfidation
Corrosion in atmospheric fluidized bed combustors--the reactions of $CaSO_4$ with Cr, Ni, Co, Fe, and several alloys, 9:31214 (J;US)
Vacancies
Positron prevacancy effects in pure annealed metals, 9:31219 (BA;NL)

METEOROLOGY
Research Programs
Geophysical fluid dynamics laboratory activities - FY83, plans - FY84, 9:31833 (R;US)

METER WAVE RADIATION
See RADIOWAVE RADIATION

METHANATION
Catalysts
Site activities of zeolite-support Ru for CO hydrogenation. Final report, 9:30457 (R;US)
Support effects on CO hydrogenation over Ru/zeolite catalysts, 9:30463 (RA;US)

METHANE
Abundance
Helium-neon laser remote measurement of methane, 9:31124 (BA;US)
Anaerobic Digestion
Landfill gas recovery: state of the art in Italy. A feasibility study for one of the biggest Italian landfills, 9:31133 (BA;US)
Chemical Reaction Yield
Fischer-Tropsch Synthesis over zeolite-supported Ru catalysts derived from $Ru_3(CO)_{12}$, 9:30462 (RA;US)
Support effects on CO hydrogenation over Ru/zeolite catalysts, 9:30463 (RA;US)
Combustion
Molecular beam sampling of transient combustion, 9:31362 (R;US)
Deuteration
Electron transport in liquids: effect of unbalancing the methane molecule by deuteration, 9:31321 (RA;AT)
Electron-Molecule Collisions
Electron impact spectroscopy of methane and methane—d_4, 9:31967 (J;US)
Forbidden Transitions
Electron impact spectroscopy of methane and methane—d_4, 9:31967 (J;US)
Infrared Spectra
Systematic GVB study of harmonic vibrational frequencies and dipole moment derivatives: The vinyl radical C_2H_3 and other simple molecules, 9:31969 (J;US)
Ion-Molecule Collisions
Differential cross sections for ionization of methane, ammonia, and water vapor by high velocity ions, 9:31968 (J;US)
Reaction of O_2^+ ions with CH_4, 9:31916 (RA;AT)
Isotope Effects
Electron transport in liquids: effect of unbalancing the methane molecule by deuteration, 9:31321 (RA;AT)
Measuring Instruments
Electrical systems for diesel engines used underground, 9:30198 (RA;US)
Molecular Structure
Systematic GVB study of harmonic vibrational frequencies and dipole moment derivatives: The vinyl radical C_2H_3 and other simple molecules, 9:31969 (J;US)
Muonic Molecules
μ^+ charge exchange and muonium formation in low pressure gases, 9:31959 (R;CA)
Production
Anaerobic digestion subprogram, 9:30474 (RA;US)
Biogas recovery from sugarcane wastes, 9:30477 (BA;US)
Biogasification of screened RDF and sewage sludge, 9:31127 (BA;US)
Characterization of process streams and the effects of plastic wastes on anaerobic digestion, 9:30476 (BA;US)
SERI Biomass Program. FY 1983 annual report, 9:30473 (R;US)
Use of catalysts in biomass gasification, 9:30481 (J;US)
Recombination
Measurements of the dissociative recombination coefficients for O_2^+, NH_4^+, H_3O^+ and NO^+ at thermal energies, 9:31943 (RA;AT)
Recovery
National Petroleum Council study on unconventional gas, 9:30256 (BA;US)
Remote Sensing
Helium-neon laser remote measurement of methane, 9:31124 (BA;US)
Synthesis
Consequent reactions of carbonized coal products under hydrogen pressure, 9:30145 (R;DE;In German)

METHANE HYDRATES
See GAS HYDRATES

METHANOGENIC BACTERIA
Biochemistry
Anaerobic digestion subprogram, 9:30474 (RA;US)
Cell Cultures
Methanogenesis from acetate, a key intermediate in nature. Annual progress report, 1983-1984, 9:30455 (R;US)
Physiology
Anaerobic digestion subprogram, 9:30474 (RA;US)

METHANOL
Production
Use of catalysts in biomass gasification, 9:30481 (J;US)
Synthesis
Development of a catalytic process for alcohol-based synthetic transportation fuel from coal-derived synthesis gases, 9:30100 (RA;US)
Proceedings of the DOE contractors' conference on indirect liquefaction, 9:30443 (R;US)

METHIONINE
Biological Effects
Regulation of expression of a soybean storage protein subunit gene. Progress report, 9:31729 (R;US)
Metabolism

MFTF DEVICES
Prior to October 1977, MX DEVICES was used to index this concept.
Computerized Control Systems
Evaluating and tuning system response in the MFTF-B control and diagnostics computers, 9:32324 (R;US)
Report on the experience with the Supervisory Control and Diagnostics System (SCDS) of MFTF-B, 9:32329 (R;US)
Control Systems
Noise filtering algorithm for the MFTF-B computer based control system, 9:32375 (R;US)
Overview of the data acquisition and control system for plasma diagnostics on MFTF-B, 9:32378 (R;US)
Stand alone computer system to aid the development of Mirror Fusion Test Facility rf heating systems, 9:32377 (R;US)
Data Acquisition Systems
Improvement in MFTF data base system response times, 9:32371 (R;US)
Overview of the data acquisition and control system for plasma diagnostics on MFTF-B, 9:32378 (R;US)
Design
DT-burning upgrade to MFTF-B, 9:32379 (R;US)
Operation
Design lessons from using programmable controllers in the MFTF-B personnel safety and interlocks system, 9:32370 (R;US)
New kind of user interface for controlling MFTF diagnostics, 9:32372 (R;US)
Plasma Diagnostics
Design and prototype results of a far-infrared interferometer for MFTF-B, 9:32330 (R;US)
Design of the electromagnetic fluctuations diagnostic for MFTF-B, 9:32328 (R;US)
Design of the plasma current sensor diagnostic for MFTF-B, 9:32325 (R;US)
Electrical grounding, shielding, and isolation for the MFTF-B plasma diagnostic system, 9:32327 (R;US)
Evaluating and tuning system response in the MFTF-B control and diagnostics computers, 9:32324 (R;US)
Local area network for the plasma diagnostics system of MFTF-B, 9:32326 (R;US)
Report on the experience with the Supervisory Control and Diagnostics System (SCDS) of MFTF-B, 9:32329 (R;US)
Power Supplies
Sparking protection for MFTF-B neutral beam power supplies, 9:32376 (R;US)
Startup experience with the MFTF-B ECRH 100 kV dc power supply, 9:32374 (R;US)
Superconducting Magnets
Alternative power supply and dump resistor connections for similar, mutally coupled, superconducting coils, 9:32368 (R;US)
High field Nb_3Sn Axicell insert coils for the Mirror Fusion Test Facility-B (MFTF-B) axicell configuration. Final report, 9:32367 (R;US)
MICE
Mortality
Analysis of atomic-bomb survivor data: ongoing research and opportunities for the future, 9:31783 (RA;US)

MISCIBLE FLOODING
See MISCIBLE-PHASE DISPLACEMENT
MISCIBLE-PHASE DISPLACEMENT
Bench-Scale Experiments
Measurement of frontal instability of two phase immiscible displacement in tar sands at reservoir conditions, 9:30271 (R;US)

MISGURNUS
See FISHES
MISONIDAZOLE
Biological Effects
Thiol depletion and enhanced melphalan toxicity by sensitizers and BSO, 9:31806 (RA;US)
Toxicity
Chemosensitization in vitro: on the mechanism of the preincubation effect of hypoxic cell sensitizers, 9:31805 (RA;US)
MITOMYCIN
Biological Effects
Lens epithelium: an in vivo-vitro model system for the study of potential cataractogens and clastogens, 9:31804 (RA;US)
MITOTIC INDEX
Bioasssy
In vitro autoradiographic studies for determination of mitotic index and labelling index in biopsies of the human oral mucosa, 9:31745 (R;DE;In German)
MIXED CARBIDE FUELS
Computerized Simulation
Modeling of carbide fuel rods, 9:30772 (J;US)
MIXED OXIDE FUEL FABRICATION PLANTS
Nuclear Materials Management
Automatic chemical determination facility for plutonium and uranium, 9:30292 (TJ;US)
MIXED OXIDE FUELS
Uranium dioxide mixed with other oxides.
Chemical Analysis
Plutonium content of fast-neutron-reactors fuels by x-ray fluorescence, 9:31307 (TJ;US)
Degassing
Hot vacuum outgassing to ensure low hydrogen content in MOX fuel pellets for thermal reactors, 9:30289 (R;IN)
Fuel Cycle
Metallic combinations of Pu-Th and ^{233}U-Th or Pu-Th and ^{233}U-^{233}U fuel cycles as possible alternatives to (Pu-U)O_2 in LMFBRS, 9:30780 (J;US)
Irradiation
Combination of fuel-cladding chemical and mechanical interactions in mixed oxide fuel pins, 9:30779 (J;US)
Post-Irradiation Examination
Combination of fuel-cladding chemical and mechanical interactions in mixed oxide fuel pins, 9:30779 (J;US)
MIXTURES
See also BINARY MIXTURES
Thermodynamic Properties
Thermophysical properties correlations and pseudocomponent characterization parameter estimation for fossil fluids. Third quarterly report, March 1, 1984-May 31, 1984, 9:30141 (R;US)
Viscosity
Thermophysical properties correlations and pseudocomponent characterization parameter estimation for fossil fluids. Third quarterly report, March 1, 1984-May 31, 1984, 9:30141 (R;US)
MOBIL M-GASOLINE PROCESS
Catalysts
Status of the 100 B/D fluid-bed methanol-to-gasoline (MTG) project, 9:30483 (RA;US)
Commercialization
Status of the 100 B/D fluid-bed methanol-to-gasoline (MTG) project, 9:30483 (RA;US)
Pilot Plants
Status of the 100 B/D fluid-bed methanol-to-gasoline (MTG) project, 9:30483 (RA;US)
Reaction Heat
Status of the 100 B/D fluid-bed methanol-to-gasoline (MTG) project, 9:30483 (RA;US)
Temperature Control
Status of the 100 B/D fluid-bed methanol-to-gasoline (MTG) project, 9:30483 (RA;US)

MODERATORS
See also descriptors for specific moderator materials.
Cross Sections
Fundamental mode decay constants for small two- and three-dimensional pulsed neutron moderator assemblies, 9:30806 (J;US)
Decay
Fundamental mode decay constants for small two- and three-dimensional pulsed neutron moderator assemblies, 9:30806 (J;US)
Neutron Transport Theory
Fundamental mode decay constants for small two- and three-dimensional pulsed neutron moderator assemblies, 9:30806 (J;US)
Pulsed Neutron Techniques
Fundamental mode decay constants for small two- and three-dimensional pulsed neutron moderator assemblies, 9:30806 (J;US)
Scattering
Fundamental mode decay constants for small two- and three-dimensional pulsed neutron moderator assemblies, 9:30806 (J;US)
MODIFIED IN-SITU PROCESSES
Feasibility Studies
Summary of the oil shale fragmentation program at Anvil Points Mine, Colorado, 9:30266 (R;US)
MOESSBAUER SPECTROMETERS
Specifications
Recent developments in microprocessor-based data systems, 9:31620 (RA;AT)
MOISTURE
Chemical Bonds
Physical properties and moisture, 9:30156 (R;US)
MOLDS
See FUNGI
MOLECULAR IONS
Coordinate the above descriptor with a descriptor for the specific ion.
See also HYDROGEN IONS 2 PLUS
HYDROGEN IONS 3 PLUS
Adsorption
Orientation of adsorbed formate ions on Pt(110), 9:31174 (RA;AT)
Ion-Atom Collisions
Method to study reactions between ions and atomic hydrogen in a quasistatic drift tube, 9:31931 (RA;AT)
Reactions of CO_2i and CH_5^+ with atomic hydrogen studied in a flow drift experiment, 9:31932 (RA;AT)
Ion-Molecule Collisions
Method to study reactions between ions and atomic hydrogen in a quasistatic drift tube, 9:31931 (RA;AT)
Orientation
Orientation of adsorbed formate ions on Pt(110), 9:31174 (RA;AT)
Recombination
Measurements of the dissociative recombination coefficients for O_2^+, NH_4^+, H_3O^+ and NO^+ at thermal energies, 9:31943 (RA;AT)
MOLECULAR ORBITAL MODEL
See MOLECULES
MOLECULAR SIEVES
Sorptive Properties
Sampling of stack gas for sulfur dioxide with a molecular sieve adsorbent, 9:31671 (J;US)
MOLECULES
Electron Attachment
Thermal electron attachment to Van der Waals molecules, 9:31946 (RA;AT)
Electronic Structure
Total and orbital SCF energies in molecules, 9:31971 (J;US)
Orientation
Orientation of HNO_3 molecules in highly oriented pyrolytic graphite-nitrates and in the corresponding residue compounds, 9:31253 (RA;IL)

Vibrational States
Chaos and multiple photon absorption, 9:31953 (R;US)

MOLIERE THEORY
Monte Carlo Method
Application of the Moliere multiple scattering angle-lateral displacement function in Monte-Carlo calculations, 9:32223 (R;SU)

MOLTEN CARBONATE FUEL CELLS
Prior to June 1980 this information was indexed with the descriptors HIGH-TEMPERATURE FUEL CELLS + MOLTEN SALTS + CARBONATES.
Corrosion
Corrosion problems and materials requirement,s for molten carbonate fuel cells, 9:31048 (J;US)
Materials Testing
Corrosion problems and materials requirement,s for molten carbonate fuel cells, 9:31048 (J;US)
Poisoning
Effects of H_2S on molten carbonate fuel cells. Progress report, October 1-December 31, 1983, 9:31046 (R;US)

MOLYBDATES
Specific compounds should be indexed by coordination of a descriptor of the form (CATION) COMPOUNDS and the above anion descriptor.
Chemical Reactions
Interactions of backfill materials with cesium in a bittern brine under repository conditions, 9:30371 (J;US)
Hydrothermal Alteration
Interactions of backfill materials with cesium in a bittern brine under repository conditions, 9:30371 (J;US)

MOLYBDENUM
Catalytic Effects
Hydroconversion of organic nitrogen compounds on refining catalysts, 9:30236 (R;DE;In German)
Pulsed-laser atom-probe studies of surface chemical reactions, 9:31315 (R;US)
Dissolution
Basalt as a potential waste package backfill component in a repository located within the Columbia River basalt, 9:30366 (J;US)
Enrichment
Determination of the minimum surface enrichment of molybdenum required to inhibit active dissolution of an Fe-Cr-Ni-Mo alloy, 9:31212 (J;US)
Ion Implantation
Phase transitions induced by bombardment of molybdenum and niobium with carbon nitrogen ions, 9:31192 (RA;UA;In Russian)
Leaching
Leach testing of Idaho Chemical Processing Plant final waste forms, 9:30378 (J;US)
Material Balance
Elemental partitioning in ash depositories and material balances for a coal burning facility by spark source mass spectrometry, 9:30167 (J;US)
Metallurgical Effects
Determination of the minimum surface enrichment of molybdenum required to inhibit active dissolution of an Fe-Cr-Ni-Mo alloy, 9:31212 (J;US)
Physical Radiation Effects
Evoluation of radiation damage structure in molybdenum alloyed with neon atoms during post-irradiation annealing, 9:31198 (R;SU;In Russian)
Neutron irradiation effects on tungsten and molybdenum optical properties and possible application of optical measurements for studies of radiation-induced defects in metals, 9:31194 (RA;UA;In Russian)
Thin layer activation for industry, 9:30425 (RA;SU)
Solvent Extraction
Separation of reduced molybdenum from fission products. The Mo-HNO_3-HDEHP system, 9:31302 (RA;SU)
Surface Treatments
Determination of the minimum surface enrichment of molybdenum required to inhibit active dissolution of an Fe-Cr-Ni-Mo alloy, 9:31212 (J;US)

MOLYBDENUM 94 TARGET
Photonuclear Reactions
Photon scattering by atomic nuclei in the region of photonucleon reaction threshold, 9:32122 (RA;SU;In Russian)

MOLYBDENUM ALLOYS
See also STAINLESS STEEL-316
Corrosion Inhibitors
Determination of the minimum surface enrichment of molybdenum required to inhibit active dissolution of an Fe-Cr-Ni-Mo alloy, 9:31212 (J;US)

MOLYBDENUM SULFIDES
Superconductivity
Observation of bulk superconductivity in $EuMo_6S_8$ under pressure, 9:31268 (J;US)
Transition Temperature
Observation of bulk superconductivity in $EuMo_6S_8$ under pressure, 9:31268 (J;US)

MONITORING (RADIATION)
See RADIATION MONITORING

MONITORS (AIR POLLUTION)

MONITORS (REACTOR)
See REACTOR CONTROL SYSTEMS

MONOCHROMATORS
Specifications
Medium energy transfer spectrometer; a crystal monochromator design, 9:31562 (R;GB)

MONTE CARLO METHOD
Eigenvalues
A comparison of maximum likelihood and other estimators of eigenvalues from several correlated Monte Carlo samples, 9:30805 (J;US)

MONTMORILLONITE
Chemical Reactions
Interactions of backfill materials with cesium in a bittern brine under repository conditions, 9:30371 (J;US)
Geochemistry
Geochemistry of the Dakota Formation of northwestern New Mexico: relevance to radioactive waste studies, 9:30365 (J;US)
Hydrothermal Alteration
Interactions of backfill materials with cesium in a bittern brine under repository conditions, 9:30371 (J;US)

MORBIDITY
See DISEASE INCIDENCE

MORDENITE
Catalytic Effects
Support effects on CO hydrogenation over Ru/zeolite catalysts, 9:30463 (RA;US)
Chemical Reactions
Interactions of backfill materials with cesium in a bittern brine under repository conditions, 9:30371 (J;US)
Hydrothermal Alteration
Interactions of backfill materials with cesium in a bittern brine under repository conditions, 9:30371 (J;US)

MOS TRANSISTORS
Metal Oxide Silicon transistors.
Physical Radiation Effects
Radiation effects in TaSi/sub x//polysilicon gate structures, 9:31613 (R;US)

MOVING-BOUNDARY CONDITIONS
Lagrangian Function
Lagrangian coordinates for moving boundary problems, 9:32297 (J;US)
Mathematical Models
Lagrangian coordinates for moving boundary problems, 9:32297 (J;US)

MT ST HELENS
Geochemical Surveys
Targeting geothermal exploration sites in the Mount St. Helens area using soil mercury surveys, 9:30579 (R;US)

MUCOSA
See MUCOUS MEMBRANES

MUCOUS MEMBRANES
Autoradiography
In vitro autoradiographic studies for determination of mitotic index and labelling index in biopsies of the human oral mucosa, 9:31745 (R;DE;In German)
MULTI-CHANNEL ANALYZERS
Design
A high performance multichannel analyzer with integral touch sensitive video display, 9:31439 (J;US)
Display Devices
A high performance multichannel analyzer with integral touch sensitive video display, 9:31439 (J;US)
Microprocessors
A high performance multichannel analyzer with integral touch sensitive video display, 9:31439 (J;US)
Performance
A high performance multichannel analyzer with integral touch sensitive video display, 9:31439 (J;US)
Reviews
Data acquisition and reduction systems for nuclear data experiments, 9:31618 (RA;AT)
Specifications
Canberra view of nuclear data acquisition and analysis, 9:31621 (RA;AT)
Recent developments in microprocessor-based data systems, 9:31620 (RA;AT)
MULTI-PARAMETER ANALYSIS
Parallel Processing
An interactive parallel processor for data analysis, 9:32425 (J;US)
MULTIPLE SCATTERING
Moliere Theory
Application of the Moliere multiple scattering angle-lateral displacement function in Monte-Carlo calculations, 9:32223 (R;SU)
Monte Carlo Method
Application of the Moliere multiple scattering angle-lateral displacement function in Monte-Carlo calculations, 9:32223 (R;SU)
Wave Functions
Multiple scattering in closely packed systems of arbitrary non-overlapping shapes, 9:32281 (R;CA)
MULTIWIRE DRIFT CHAMBERS
See DRIFT CHAMBERS
MULTIWIRE PROPORTIONAL CHAMBERS
See also DRIFT CHAMBERS
Fastbus System
MWPC data acquisition in the Brookhaven FASTBUS, 9:31520 (J;US)
MUNICIPAL WASTES
Anaerobic Digestion
Bacterial levels as a function of operating temperatures at a municipal solid waste anaerobic digestor, 9:30475 (BA;US)
Characterization of process streams and the effects of plastic wastes on anaerobic digestion, 9:30476 (BA;US)
Enhancement of gas production in sanitary landfill sites. Experiences in West Germany, 9:31134 (BA;US)
Microbiologic content of aerosols generated in the classification shed of a Municipal Solid Waste (MSW) Processing Facility, Pompano Beach, Florida, 9:31672 (BA;US)
Chemical Composition
Characterization of process streams and the effects of plastic wastes on anaerobic digestion, 9:30476 (BA;US)
Composition and properties of municipal solid waste and its components. Final report, 9:31107 (R;US)
Chemical Properties
Composition and properties of municipal solid waste and its components. Final report, 9:31107 (R;US)
Combustion
Energy recovery from mass burning of municipal solid wastes, 9:31129 (BA;US)
Environmental consequences arising from the combustion of municipal solid waste, 9:31121 (BA;US)
Crushing
Differential crushing: the basic principle of glass-free RDF manufacturing, 9:31132 (BA;US)
Fermentation
Introduction and reisolation of selected gram-positive and gram-negative bacteria from fermented edible wastes, 9:31126 (BA;US)
Process to ferment food waste and monitor the effect on harmful organisms, 9:31116 (BA;US)
Survival of viruses in fermented edible waste, 9:31117 (BA;US)
Incinerators
Electrostatic precipitator for the control of HCl and particulate emissions from a municipal incinerator, 9:31673 (BA;US)
Physical Properties
Composition and properties of municipal solid waste and its components. Final report, 9:31107 (R;US)
Purification
Introduction and reisolation of selected gram-positive and gram-negative bacteria from fermented edible wastes, 9:31126 (BA;US)
Survival of viruses in fermented edible waste, 9:31117 (BA;US)
Recycling
Economic assessment of refuse recycling plants at the feasibility study stage, 9:31114 (BA;US)
Size
Composition and properties of municipal solid waste and its components. Final report, 9:31107 (R;US)
Sorting
Factors influencing glass particle transport in vertical air classifiers, 9:31131 (BA;US)
MUON BEAMS
Cooling
Principles and applications of muon cooling, 9:31527 (J;GB)
MUON DETECTION
Magnetic Spectrometers
Magnetic induction distribution in the JINR-IHEP neutrino detector magnetic shell and evaluation of scattering magnetic fields, 9:31608 (RA;XJ;In Russian)
MUON NEUTRINOS
Neutrino Oscillation
Limits on muon-neutrino oscillations in the mass range $30 < \Delta m^2 < 1000\ eV^2/c^4$, 9:32010 (J;US)
Rest Mass
Neutrinoless double-beta decay in left-right symmetric models, 9:32026 (R;CA)
MUON PROBES
Spin depolarization in muonium by hydrated electrons, 9:31960 (R;CA)
MUONIUM
Chemical Reaction Kinetics
Application of the muonium spin rotation technique to a study of the gas phase chemical kinetics of muonium reaction with the halogens and hydrogen halides, 9:31873 (R;CA)
Muonium addition to cyanides, 9:31963 (R;CA)
Diffusion
Evidence for anisotropic diffusion of Mu in ice and implications for H, 9:31961 (R;CA)
Spin Exchange
Spin-conversion reaction of muonium with nickel cyclam, 9:31964 (R;CA)
MUONS
See also MUONS MINUS
MUONS PLUS
Weak Particle Decay
Note on the mixings of heavy neutrinos and muon decays, 9:32030 (R;CA)
MUONS MINUS
Weak Particle Decay
$(\mu p, e^+)$ conversion with Majoron emission, 9:32028 (R;CA)
μ^- conversion via doubly charged Higgs scalar, 9:32029 (R;CA)
MUONS PLUS
Depolarization
Spin depolarization in muonium by hydrated electrons, 9:31960 (R;CA)

MUSCLES
Cell Membranes
Neutron diffraction and the decomposition of membrane scattering profiles into the scattering profiles of their molecular components, 9:31733 (R;US)
MUSCULAR TISSUE
See MUSCLES
MUTAGEN SCREENING
Animals
Interim report on the genetic and animal toxicity testing of SRC-I products, intermediates, and waste materials, 9:30123 (R;US)
Quality Assurance
Interim report on the genetic and animal toxicity testing of SRC-I products, intermediates, and waste materials. Appendix F. QC/QA monitoring reports, 9:30130 (R;US)
Quality Control
Interim report on the genetic and animal toxicity testing of SRC-I products, intermediates, and waste materials. Appendix F. QC/QA monitoring reports, 9:30130 (R;US)
Toxicity

NATURAL GAS
Synopsis of the Annual Energy Review and Outlook, 1983, 9:30993 (R;US)
Condensates
Calculation equation of the condensation in hydrocarbon mixtures under the influence of heavy volatile components and taking hydrogen into consideration, using a thermal state equation, 9:30263 (R;DE;In German)
Energy Models
Development of an analytical framework to assess the role of new technologies for liquid and gaseous fuels. Volume I. Background. Final report, 9:31024 (R;US)
Enhanced Recovery
Development of an analytical framework to assess the role of new technologies for liquid and gaseous fuels. Volume I. Background. Final report, 9:31024 (R;US)
Equations of State
Calculation equation of the condensation in hydrocarbon mixtures under the influence of heavy volatile components and taking hydrogen into consideration, using a thermal state equation, 9:30263 (R;DE;In German)
Market
Natural gas monthly, 9:30257 (R;US)
Prices
Annual petroleum review. Volume 1, 9:30248 (R;US)
Annual petroleum review. 1982 annual report to the Legislature. Volume 2, 9:30249 (R;US)
State energy price and expenditure report, 1970-1981, 9:30242 (R;US)
Pricing Regulations
Annual petroleum review. Volume 1, 9:30248 (R;US)
Principles of the administration's natural gas deregulation proposal, 9:30261 (J;US)
Recovery
National Petroleum Council study on unconventional gas, 9:30256 (BA;US)
Research Programs
Summary of university contracts and grants supported by the Office of Fossil Energy, FY 1983, 9:30120 (R;US)
Summary of AR and TD/APT contracts and grants supported by the Office of Fossil Energy FY 83, 9:30121 (R;US)
Supply and Demand
Annual petroleum review. 1982 annual report to the Legislature. Volume 2, 9:30249 (R;US)
Natural gas monthly, 9:30257 (R;US)
Thermodynamic Properties
Calculation equation of the condensation in hydrocarbon mixtures under the influence of heavy volatile components and taking hydrogen into consideration, using a thermal state equation, 9:30263 (R;DE;In German)
NATURAL GAS DEPOSITS
Explosive Fracturing
Model for economic evaluation of high energy gas fracturing, 9:30258 (R;US)
New borehole fracturing technique improves gas production, 9:30259 (RA;US)
Resource Potential
Development of an analytical framework to assess the role of new technologies for liquid and gaseous fuels. Volume I. Background. Final report, 9:31024 (R;US)
National Petroleum Council study on unconventional gas, 9:30256 (BA;US)
Stratigraphy
Analysis of stratigraphic barriers (caprock) between sands in the cretaceous Mesa Verde formation, US DOE Multiwell Experiment, Garfield County, Colorado, 9:30253 (R;US)
NATURAL GAS WELLS
Mathematical Models
Evaluation of zero-dimensional gas reservoir models, 9:30255 (R;US)
NAVIER-STOKES EQUATION

NEODYMIUM OXIDES
Spatial Distribution
Investigations of the crystallization process of neodymium doped YAG using radiotracers, 9:31317 (RA;SU)
NEON
Collisions
Application of the semiclassical perturbation approximation to scattering from surfaces. Generalization to include phonon inelasticity, 9:31970 (J;US)
Scattering of ^{20}Ne atoms from the (001) face of LiF, 9:31900 (RA;AT)
Electron Drift
Characteristic energy of low-energy electrons in Ne, Kr, and Xe gases, 9:31920 (RA;AT)
Muonic Atoms
μ^+ charge exchange and muonium formation in low pressure gases, 9:31959 (R;CA)
NEON 20 REACTIONS
Elastic Scattering
Study of the reaction mechanisms in the system ^{20}Ne + ^{197}Au at projectile energies between 7.5 and 20 MeV/u, 9:32139 (R;DE;In German)
Inclusive Interactions
Inclusive production of K^+-mesons in collisions between cold and hot nucleons, 9:32078 (RA;DE;In German)
Quasi-Elastic Scattering
Study of the reaction mechanisms in the system ^{20}Ne + ^{197}Au at projectile energies between 7.5 and 20 MeV/u, 9:32139 (R;DE;In German)
Quasi-Fission
Study of the reaction mechanisms in the system ^{20}Ne + ^{197}Au at projectile energies between 7.5 and 20 MeV/u, 9:32139 (R;DE;In German)
Transfer Reactions
Short-lived spontaneously fissioning activities produced at the sup(20, 22)Ne ion interaction with ^{249}Bk and ^{249}Cf target nuclei, 9:32152 (R;XJ;In Russian)
NEON 22 REACTIONS
Transfer Reactions
Short-lived spontaneously fissioning activities produced at the sup(20, 22)Ne ion interaction with ^{249}Bk and ^{249}Cf target nuclei, 9:32152 (R;XJ;In Russian)
NEON IONS
Collisions
Rutherford backscattering, nuclear reaction and channeling studies of nitrogen implanted single-crystal stainless steel, 9:31895 (RA;AT)
Diffusion
Transverse diffusion of mass-identified ions in their parent gases, 9:31934 (RA;AT)
Electron-Ion Collisions
Cluster ion-electron recombination measurements: the trimer ion Ne_3^+, 9:31944 (RA;AT)
NEOPENTANE
See 2-2-DIMETHYLPROPANE
NEOPLASMS
Diagnosis
Computerized tomography of intracranial tumors. Problems and limitations, 9:31736 (R;DE;In German)
Disease Incidence
RERF cohort studies: aspects of data analysis and resource utilization, 9:31779 (RA;US)
Studies of cancer incidence in the life-span study sample: example of breast cancer, 9:31771 (RA;US)
Dose-Response Relationships
Use of cancer mortality data in Hiroshima and Nagasaki to assess various aspects of the radiation dosimetry, 9:31776 (RA;US)
Risk Assessment
Health risks from light-duty diesel vehicles, 9:31816 (J;US)
Tissue Distribution
Use of cancer mortality data in Hiroshima and Nagasaki to assess various aspects of the radiation dosimetry, 9:31776 (RA;US)
NEPTUNIUM
Electronic Structure
Recent applications of the relativistically parameterized extended Huckel method (REX) on actinide compounds, 9:31339 (RA;IL)
Leaching
Continuous-flow leaching studies of crushed and cored SYNROC, 9:30372 (J;US)
NEPTUNIUM 237
Production
The role of plutonium-238 in nuclear fuel cycles, 9:30711 (J;US)
NEPTUNIUM ALLOYS
Laves Phases
Composition-dependent magnetic properties of NpCosub(2+-x) laves-phase compounds. Moessbauer and X-ray diffraction studies, 9:31181 (RA;IL)
Magnetic Properties
Composition-dependent magnetic properties of NpCosub(2+-x) laves-phase compounds. Moessbauer and X-ray diffraction studies, 9:31181 (RA;IL)
Magnetic properties of N/sub p/M_4Al_8 intermetallic compounds (M = Cr, Cu) studied by Moessbauer effect magnetic susceptibility and neutron diffraction, 9:31182 (RA;IL)
X-Ray Diffraction
X-ray diffraction study of $NpAl_2$ at high pressure, 9:31183 (RA;IL)
NEPTUNIUM ARSENIDES
Crystal Structure
Crystal structure and electrical resistivity of some neptunium ternary compounds NpAsY (Y = S, Se, Te), 9:31344 (RA;IL)
Electric Conductivity
Crystal structure and electrical resistivity of some neptunium ternary compounds NpAsY (Y = S, Se, Te), 9:31344 (RA;IL)
NEPTUNIUM COMPLEXES
Moessbauer Effect
Synthesis and Moessbauer studies of carnotite-type compounds $M_2(NpO_2)_2V_2O_8$, (M = K, Rb, Tl), 9:31345 (RA;IL)
Monoclinic Lattices
Structural study of neptunyl (NpO_2^+) complex with mellitic acid, 9:31346 (RA;IL)
Synthesis
Synthesis and Moessbauer studies of carnotite-type compounds $M_2(NpO_2)_2V_2O_8$, (M = K, Rb, Tl), 9:31345 (RA;IL)
NEPTUNIUM COMPOUNDS

NEUTRON MONITORS
Wide range neutron monitor, 9:30827 (J;US)
NEUTRON MULTIPLIER FACILITY
See SUBCRITICAL ASSEMBLIES
NEUTRON RADIOGRAPHY
High-speed motion neutron radiography, 9:31610 (J;US)
Uses
Neutron radiography applications at the CRIP's WWR-SM research reactor, 9:32248 (R;HU;In Hungarian)
NEUTRON REACTIONS
Capture
Examination of the resonance structure of $^{32}S + N$ by measurement of the total cross section and the elastic neutron scattering, 9:32097 (R;DE ;In German)
Nuclear structure of ^{244}Am investigated with the (n,γ) reaction, 9:32154 (J;US)
Polarized neutron capture into ^{13}C: Evidence for a secondary doorway state effect, 9:32092 (J;US)
Sensitivity of computed uranium-238 self-shielding factors to the choice of the unresolved average resonance parameters, 9:32156 (J;US)
Coherent Scattering
Neutron interferrometric determination of the coherent scattering length of thorium, 9:32151 (RA;IL)
Compound-Nucleus Reactions
MARY: a computer code for the analysis of γ-rays following compound inelastic scattering of neutrons in experiments using close neutron source-to-scatterer geometry, 9:32067 (R;US)
Cross Sections
Sensitivity of computed uranium-238 self-shielding factors to the choice of the unresolved average resonance parameters, 9:32156 (J;US)
Elastic Scattering
Off-shell effects in nucleon-deuteron polarization observables, 9:32231 (R;AT)
Reply to "Calculation of the Lorentz-weighted average from high-resolution low-energy neutron scattering data", 9:32236 (J;US)
Fast Fission
Measurement of the $^{235}U/^{238}U$ fission cross section ratio in the ^{235}U fission neutron spectrum, 9:32147 (R;AT)
Fission
Neutron multiplicities of ^{252}Cf and the fissile nuclei. Final report, 9:32146 (R;US)
Inelastic Scattering
MARY: a computer code for the analysis of γ-rays following compound inelastic scattering of neutrons in experiments using close neutron source-to-scatterer geometry, 9:32067 (R;US)
Knock-Out Reactions
Neutron induced inclusive light fragment production at intermediate energies, 9:32205 (RA;HU)
Particle Production
Pion production on light nuclei by medium energy neutrons, 9:32070 (RA;HU)
Scattering
Some applications of the evolution method in a coupling constant in nuclear physics, 9:32225 (R;SU;In Russian)
Strength Functions
Psub(1/2) and psub(3/2) components of the neutron strength function, 9:32224 (R;SU;In Russian)
NEUTRON SOURCES
Excludes reactors even when used as neutron sources.
Thermal Neutrons
Modernization of pulsed thermal neutron source for the "Fakel" accelerator, 9:31473 (RA;SU;In Russian)
NEUTRON SPECTROMETERS
Pulsed Neutron Techniques
Use of vanadium as a scattering standard for pulsed source neutron spectrometers, 9:32249 (R;GB)
NEUTRON SPECTROSCOPY
Time-of-Flight Method
Heterogeneous effects and influence of an output channel during neutron spectra measurement by the time-of-flight method, 9:32239 (R;SU;In Russian)
NEUTRON TRANSPORT THEORY
Asymptotic Solutions
Asymptotic equivalence of neutron diffusion and transport in time-independent reactor systems, 9:30804 (J;US)
Fundamental mode decay constants for small two- and three-dimensional pulsed neutron moderator assemblies, 9:30806 (J;US)
Fourier Transformation
Fundamental mode decay constants for small two- and three-dimensional pulsed neutron moderator assemblies, 9:30806 (J;US)
Kernels
Fundamental mode decay constants for small two- and three-dimensional pulsed neutron moderator assemblies, 9:30806 (J;US)
Time Dependence
Asymptotic equivalence of neutron diffusion and transport in time-independent reactor systems, 9:30804 (J;US)
NEUTRONS
See also FISSION NEUTRONS
THERMAL NEUTRONS
Mean Free Path
Asymptotic equivalence of neutron diffusion and transport in time-independent reactor systems, 9:30804 (J;US)
Neutron Leakage
Asymptotic equivalence of neutron diffusion and transport in time-independent reactor systems, 9:30804 (J;US)
Neutron Transport
Asymptotic equivalence of neutron diffusion and transport in time-independent reactor systems, 9:30804 (J;US)
Scattering
Asymptotic equivalence of neutron diffusion and transport in time-independent reactor systems, 9:30804 (J;US)
Weak Particle Decay
Chiral Lagrangian calculation of nucleon decay modes induced by d = 5 supersymmetric operators, 9:32022 (R;GB)
NEVADA
Land Use
Evaluation of four completed small watershed projects: South Carolina, Maryland, Idaho-Nevada, and West Virginia. Agricultural economic report, 9:31006 (R;US)
Magma Systems
Chemical evolution of a high-level magma system: the Black Mountain volcanic center, southern Nevada, 9:30576 (R;US)
NEVADA TEST SITE
Seismic Surveys
Evaluation of seismic reflection studies in the Yucca Mountain area, Nevada test site, 9:30361 (R;US)
NEW HAMPSHIRE
Geologic Deposits
Geology, hydrology, and mineral resources of crystalline rock areas of the northeastern United States. Part 2, 9:31827 (R;US)

Geology
Geology, hydrology, and mineral resources of crystalline rock areas of the northeastern United States, 9:31826 (R;US)
Hydrology
Geology, hydrology, and mineral resources of crystalline rock areas of the northeastern United States, 9:31826 (R;US)
Mineral Resources
Geology, hydrology, and mineral resources of crystalline rock areas of the northeastern United States, 9:31826 (R;US)

NEW JERSEY
Geologic Deposits
Geology, hydrology, and mineral resources of crystalline rock areas of the northeastern United States. Part 2, 9:31827 (R;US)
Geology
Geology, hydrology, and mineral resources of crystalline rock areas of the northeastern United States, 9:31826 (R;US)
Hydrology
Geology, hydrology, and mineral resources of crystalline rock areas of the northeastern United States, 9:31826 (R;US)
Mineral Resources
Geology, hydrology, and mineral resources of crystalline rock areas of the northeastern United States, 9:31826 (R;US)

NEW MEXICO
Geologic Formations
Geochemistry of the Dakota Formation of northwestern New Mexico: relevance to radioactive waste studies, 9:30365 (J;US)
Radioactive Waste Disposal
Geochemistry of the Dakota Formation of northwestern New Mexico: relevance to radioactive waste studies, 9:30365 (J;US)

NEW YORK
Geologic Deposits
Geology, hydrology, and mineral resources of crystalline rock areas of the northeastern United States. Part 2, 9:31827 (R;US)
Geology
Geology, hydrology, and mineral resources of crystalline rock areas of the northeastern United States, 9:31826 (R;US)
Hydrology
Geology, hydrology, and mineral resources of crystalline rock areas of the northeastern United States, 9:31826 (R;US)
Mineral Resources
Geology, hydrology, and mineral resources of crystalline rock areas of the northeastern United States, 9:31826 (R;US)
Wind
High yield wind energy resources in the mid-Hudson River basin. Final report, 9:30594 (R;US)

NEW ZEALAND
Coal Deposits
Anode carbon from buller coal, New Zealand, 9:30154 (R;US)

NICKEL
Atom Collisions
Hydrogen recombination reaction on Ni investigated with atomic beams, 9:31902 (RA;AT)
Indoor Air Pollution
Health hazard evaluation determination report No. MHETA-81-108-9006, Consolidation Coal Company, central machine shop 20, Cadiz, Ohio, 9:30223 (R;US)
Sorptive Properties
Coadsorption and reaction of H_2 and CO on Raney nickel: Neutron vibrational spectroscopy, 9:31175 (RA;AT)
Sputtering
Low dose sputtering experiments, 9:31891 (RA;AT)

NICKEL 58 REACTIONS
Fusion Reactions
Coupled-channels fusion calculations for $^{58}Ni + {}^{58}Ni$, 9:32104 (J;US)

NICKEL 58 TARGET
Nickel 58 Reactions
Coupled-channels fusion calculations for $^{58}Ni + {}^{58}Ni$, 9:32104 (J;US)

NICKEL ALLOYS
See also NICKEL BASE ALLOYS
STAINLESS STEEL-21-6-9
Amorphous State
Neutron- and X-ray diffraction investigations for the metallic glasses $Ni_{81}B_{19}$ and $Co_{80}P_{20}$, 9:31172 (R;DE;In German)
Capture
Measurements of structural material capture to uranium-235 fission rate ratios in an intermediate spectrum assembly, 9:30785 (J;US)
Corrosion Inhibitors
Determination of the minimum surface enrichment of molybdenum required to inhibit active dissolution of an Fe-Cr-Ni-Mo alloy, 9:31212 (J;US)
Magnetoresistance
Magnetoresistance of Pd-Fe and Pd-Ni-Fe alloys, 9:31170 (RA;BR)
Neutron Reactions
Measurements of structural material capture to uranium-235 fission rate ratios in an intermediate spectrum assembly, 9:30785 (J;US)
Order-Disorder Transformations
Effect of high pressure on the order-disorder transitions in Fe-Ni alloys, 9:31154 (RA;BR)
Physical Radiation Effects
Evolution of cavity microstructure in ion-irradiated 316 SS and Fe-20Ni-15Cr alloy (Fe-20Ni-15Cr), 9:31144 (R;US)

NICKEL BASE ALLOYS
Brazing
Study of boron diffusion in high temperature Ni-base alloys by means of solid-state track detectors, 9:31303 (RA;SU)

NICKEL COMPLEXES
Spin Exchange
Spin-conversion reaction of muonium with nickel cyclam, 9:31964 (R;CA)

NICKEL COMPOUNDS
See also NICKEL OXIDES
Laves Phases
5f-electrons in uranium laves-phase compounds. Photoemission from UMn_2, UFe_2, UCo_2, UFeNi, UOs_2 and UIr_2, 9:31180 (RA;IL)
Photoemission
5f-electrons in uranium laves-phase compounds. Photoemission from UMn_2, UFe_2, UCo_2, UFeNi, UOs_2 and UIr_2, 9:31180 (RA;IL)

NICKEL OXIDES
Diffusion
Point defects and diffusion mechanisms in the monoxides of the iron-group metals, 9:31221 (R;US)

NICKEL-CHROMIUM STEELS
Ductile-Brittle Transitions
Ductile-brittle transition temperature measurement of temper embrittled Ni-Cr steels by means of small punch tests, 9:31197 (R;US)

NIM
See NUCLEAR INSTRUMENT MODULES

NIOBATES
Specific compounds should be indexed by coordination of a descriptor in the form (CATION) COMPOUNDS and the above anion descriptor.
Optical Properties
Second harmonic generation in $LiNbO_3$ crystals with periodic laminar ferroelectric domains, 9:31274 (TJ;US)

NIOBIUM
Ion Implantation
Phase transitions induced by bombardment of molybdenum and niobium with carbon nitrogen ions, 9:31192 (RA;UA;In Russian)
Penetration Depth
Polarized-neutron reflections: A new technique used to measure the magnetic field penetration depth in superconducting niobium, 9:31204 (J;US)

NIOBIUM 93 TARGET
Photonuclear Reactions
Photon scattering by atomic nuclei in the region of photonucleon reaction threshold, 9:32122 (RA;SU;In Russian)

NIOBIUM ADDITIONS
Tensile Properties
CANDU-PHW pressure tubes: Their manufacture, inspection, and properties, 9:30759 (J;US)
NIOBIUM ALLOYS
See also INCONEL 600
NIOBIUM ADDITIONS
Crevice Corrosion
Absorption of dissolved hydrogen from lithiated water during accelerated corrosion of zirconium-2.5 wt% niobium alloy, 9:31201 (R;CA)
NIOBIUM COMPOUNDS
See also NIOBATES
NIOBIUM SELENIDES
Mixed State
High-field specific heats of A15 V_3Si and Nb_3Sn, 9:31271 (J;US)
Specific Heat
High-field specific heats of A15 V_3Si and Nb_3Sn, 9:31271 (J;US)
NIOBIUM SELENIDES
Far infrared optical properties of $NbSe_3$, 9:31264 (R;US)
NITRATES
See also NEPTUNIUM NITRATES
PETN
PLUTONIUM NITRATES
THORIUM NITRATES
URANIUM NITRATES
Biological Effects
Effect of the sulfate-to-nitrate ratio on the response of radish to simulated rain acidity, 9:31799 (RA;US)
Quantity Ratio
Effect of the sulfate-to-nitrate ratio on the response of radish to simulated rain acidity, 9:31799 (RA;US)
NITRIC ACID
Adsorption
Orientation of HNO_3 molecules in highly oriented pyrolytic graphite-nitrates and in the corresponding residue compounds, 9:31253 (RA;IL)
NITRO COMPOUNDS
See also NITROMETHANE
POLYCYCLIC NITRO COMPOUNDS
Metabolism
Intracellular thiols: involvement in drug metabolism and radiation response, 9:31803 (RA;US)
Radiosensitivity Effects
3-nitro triazole as a hypoxic cell sensitizer, 9:31760 (RA;US)
Intracellular thiols: involvement in drug metabolism and radiation response, 9:31803 (RA;US)
NITROGEN
Atom-Molecule Collisions
Temperature dependence of the de-excitation rate constants of excited rare gas atoms by atoms and molecules, 9:31949 (RA;AT)
Charged-Particle Transport
Measurement of multi-differential electron distributions of an electron beam in nitrogen, 9:32240 (R;DE;In German)
Ion-Molecule Collisions
Drift tube measurements of the temperature dependence of ion association reactions in atmospheric gases. Product ion yields of reactions in methane, 9:31927 (RA;AT)
Energy dependence of the clustering reactions of Li^+ ions with some atmospheric gases, 9:31923 (RA;AT)
Ionisation of Rydberg ions, 9:31880 (RA;DE;In German)
Production of excited projectile states by electron capture in fast ion-atom collisions, 9:31879 (RA;DE;In German)
Temperature dependences of the $N_2^+ + N_2 \rightarrow N_4^+$ and $O_2^+ + O_2 \rightarrow O_4^+$ association reactions, 9:31924 (RA;AT)
Temperature dependence of three-body ion-molecule reactions, 9:31926 (RA;AT)
Muonic Molecules
μ^+ charge exchange and muonium formation in low pressure gases, 9:31959 (R;CA)
NITROGEN DIOXIDE
NO_2.
Chemical Reactions
Molecular beam sampling of transient combustion, 9:31362 (R;US)
Indoor Air Pollution
Health hazard evaluation determination report No. MHETA 81-108-9004, 9:31659 (R;US)
NITROGEN IONS
Chemical Reaction Kinetics
Temperature dependences of the $N_2^+ + N_2 \rightarrow N_4^+$ and $O_2^+ + O_2 \rightarrow O_4^+$ association reactions, 9:31924 (RA;AT)
Collisions
Band structure in high energy ion beam surface interaction at grazing incidence, 9:31890 (RA;AT)
Rutherford backscattering, nuclear reaction and channeling studies of nitrogen implanted single-crystal stainless steel, 9:31895 (RA;AT)
De-Excitation
Vibrational relaxation of molecular ions in flow-drift tubes, 9:31921 (RA;AT)
Diffusion
Transverse diffusion of mass-identified ions in their parent gases, 9:31934 (RA;AT)
Ion Drift
Energy distributions of N^+ ions drifting in helium, 9:31935 (RA;AT)
Ion-Molecule Collisions
Drift tube measurements of the temperature dependence of ion association reactions in atmospheric gases. Product ion yields of reactions in methane, 9:31927 (RA;AT)
Internal energy of N_4^+ drifting in N_2 and He, 9:31941 (RA;AT)
Temperature dependences of the $N_2^+ + N_2 \rightarrow N_4^+$ and $O_2^+ + O_2 \rightarrow O_4^+$ association reactions, 9:31924 (RA;AT)
Temperature dependence of three-body ion-molecule reactions, 9:31926 (RA;AT)
Vibrational States
Internal energy of N_4^+ drifting in N_2 and He, 9:31941 (RA;AT)
Vibrational relaxation of molecular ions in flow-drift tubes, 9:31921 (RA;AT)
NITROGEN NITRIDES
See NITROGEN
NITROGEN OXIDES
See also NITROGEN DIOXIDE
Atom-Molecule Collisions
Temperature dependence of the de-excitation rate constants of excited rare gas atoms by atoms and molecules, 9:31949 (RA;AT)
Combustion Kinetics
Kinetics of NO/sub x/ formation during early stages of pulverized coal combustion. Final report September 1980-September 1982, 9:30217 (R;US)
Cross Sections
Mass spectrometric determination of partial electron impact ionization cross sections of No, No_2, and N_2O from threshold up to 180 eV, 9:31906 (R;AT)
De-Excitation
Vibrational relaxation of molecular ions in flow-drift tubes, 9:31921 (RA;AT)
Diffusion
Eagle series data report: 1983 nitrogen tetroxide spills, 9:31662 (R;US)
Electron-Molecule Collisions
Mass spectrometric determination of partial electron impact ionization cross sections of No, No_2, and N_2O from threshold up to 180 eV, 9:31906 (R;AT)
Emission
Assessment of hydrocarbon and particulate emissions control and wastewater treatment technology for the solvent refined coal-II process. Volume I. Executive summary, 9:30180 (R;US)
Assessment of hydrocarbon and particulate emissions control and wastewater treatment technology for the Solvent Refined Coal-II process. Volume II. Technical report, 9:30181 (R;US)
Ion-Molecule Collisions
Drift tube measurements of the temperature dependence of ion association reactions in atmospheric gases. Product ion yields of reactions in methane, 9:31927 (RA;AT)
Vibrational relaxation of NO^+ (v=3,2,1) by various neutrals, 9:31933 (RA;AT)

Recombination
Measurements of the dissociative recombination coefficients for O_2^+, NH_4^+, H_3O^+ and NO^+ at thermal energies, 9:31943 (RA;AT)
Removal
Effect of feed gas trace components on the SRC-I hydrogen purification unit. Final technical report, 9:30133 (R;US)
Sorption
Evaluation of the NOXSO combined NO/sub x//SO_2 flue gas treatment process: process chemistry, reaction kinetics, sorbent performance, process design and cost analysis. Final report, 9:30171 (R;US)
Vibrational States
Vibrational relaxation of molecular ions in flow-drift tubes, 9:31921 (RA;AT)

2-NITROINIDAZOLE
See MISONIDAZOLE

NITROMETHANE
Absorption Spectra
Experimental studies in molecular fragmentation: processes, energetics and diagnostics. Annual report No. 1, 1 Jan-31 Dec 83, 9:31326 (R;US)
Photochemical Reactions
Experimental studies in molecular fragmentation: processes, energetics and diagnostics. Annual report No. 1, 1 Jan-31 Dec 83, 9:31326 (R;US)

NITRONIC 40
See STAINLESS STEEL-21-6-9

NITROREDUCTASES
Metabolism
Intracellular thiols: involvement in drug metabolism and radiation response, 9:31803 (RA;US)

NMR
See NUCLEAR MAGNETIC RESONANCE

NOISE
Measuring Instruments
High precision measurement of transistor noise with automatic calibration under computer control, 9:31445 (J;US)

NOISE (REACTOR)
See REACTOR NOISE

NONAXIAL NUCLEI
See DEFORMED NUCLEI

NONLEPTONIC DECAY
See WEAK HADRONIC DECAY

NONLINEAR PLASMA INSTABILITIES

NONLINEAR PROBLEMS
Differential Equations
Sensitive dependence to parameters, fat fractals, and universal strange attractors, 9:32416 (R;US)

NONLINEAR SYSTEMS
See NONLINEAR PROBLEMS

NONRADIOACTIVE WASTE DISPOSAL
See WASTE DISPOSAL

NONRADIOACTIVE WASTES
See GASEOUS WASTES
SOLID WASTES

NORTH CAROLINA
Geochemical Surveys
National Uranium Resource Evaluation stream-sediment, hydrogeochemical, and aeromagnetic data characteristics of the Piedmont Region, eastern United States: a data release, 9:30279 (R;US)
Magnetic Surveys
National Uranium Resource Evaluation stream-sediment, hydrogeochemical, and aeromagnetic data characteristics of the Piedmont Region, eastern United States: a data release, 9:30279 (R;US)

NORTH SEA
Offshore Operations
Future perspectives of oil and natural gas activities in the Danish part of the North Sea, 9:31025 (RA;DK;In Danish)

NORTHERN IRELAND
See UNITED KINGDOM

NORTHWEST TERRITORIES
Geologic History
Uraniferous granites and associated mineralization in the Fury and Hecla Strain area, Baffin Island, N.W.T., 9:31852 (RA;CA)
Radiometric Surveys
Uraniferous granites and associated mineralization in the Fury and Hecla Strain area, Baffin Island, N.W.T., 9:31852 (RA;CA)

NORWAY
Interconnected Power Systems
Power pool in Norway. Annual report 1982, 9:30688 (R;NO;In Norwegian)
Offshore Operations
Norwegian-Danish offshore 82. Report, 9:30260 (R;DK;In Norwegian)
Oil Fields
Summary of exploration development and production activities on the Norwegian continental shelf in the next few years, 9:30229 (RA;DK;In Norwegian)
Petroleum Industry
Norsk Hydro as offshore operator - potential cooperation with the Danish industry, 9:30245 (RA;DK;In Norwegian)
Plans of Statoil future offshore activities including Statoil investment plans. Statoil wholesale policy, 9:31026 (RA;DK;In Norwegian)

NOVA SCOTIA
Thorium Ores
Geochemistry and the distribution of uranium and thorium in the granitoid rocks of the south mountain batholith, Nova Scotia. Some genetic and exploration implications, 9:30282 (RA;CA)
Uranium Deposits
Geochemistry and the distribution of uranium and thorium in the granitoid rocks of the south mountain batholith, Nova Scotia. Some genetic and exploration implications, 9:30282 (RA;CA)

NOVETTE FACILITY
Soft X Radiation
Soft x-ray laser experiments at Novette Laser Facility, 9:32380 (R;US)

NPR REACTOR
See N-REACTOR

N-REACTOR
Primary Coolant Circuits
CRUD sample system design criteria, 9:30851 (RA;US)

NRTS
See IDAHO NATIONAL ENGINEERING LABORATORY

NUCLEAR ATTACKS

NUCLEAR DATA COLLECTIONS
1983 recent references (Cumulation), 9:32066 (J;US)

NUCLEAR EVAPORATION
See EVAPORATION MODEL

NUCLEAR EXPLOSIONS
Specifically named single nuclear explosions are listed by name and the word EVENT, e.g., BOXCAR EVENT. All projects involving nuclear explosions are listed by the project name and the word PROJECT, e.g., PLOWSHARE PROJECT.
Dosimetry
Characteristics of current and expected dosimetry, 9:31775 (RA;US)

NUCLEAR FACILITIES
See also FUEL FABRICATION PLANTS
FUEL REPROCESSING PLANTS
NUCLEAR POWER PLANTS
RADIOACTIVE WASTE FACILITIES
Contract Management
DOE's safety and health oversight program at nuclear facilities could be strengthened, 9:31013 (R;US)
Government Policies
Decree No. 82-918 of 26 October 1982 concerning the High Council for Nuclear Safety, 9:30786 (R;FR;In French)
Decree No. 82-531 of 22 June 1982 on the Higher Council for Nuclear Safety, 9:30788 (R;FR;In French)

Materials
Materials characterization capabilities at DOE Nuclear Weapons Laboratories and Production Plants, 9:31294 (R;US)
Nuclear Insurance
1983 No. 919. The Nuclear Installations (Prescribed Sites) Regulations 1983, 9:30876 (R;GB)
Energy Act 1983, 9:30875 (R;GB)
Physical Protection
Physical protection of nuclear operational units, 9:30393 (R;BR;In Portuguese)
Radiation Monitoring
Surplus Facilities Management Program. Post-remedial-action survey report for SNAP-8 Experimental Reactor Facility, Building 010 site, Santa Susana Field Laboratories, Rockwell International, Ventura County, California, 9:30863 (R;US)
Regulations
Decree No. 82-918 of 26 October 1982 concerning the High Council for Nuclear Safety, 9:30786 (R;FR;In French)
Decree No. 82-531 of 22 June 1982 on the Higher Council for Nuclear Safety, 9:30788 (R;FR;In French)
Safety
Decree No. 82-918 of 26 October 1982 concerning the High Council for Nuclear Safety, 9:30786 (R;FR;In French)
Decree No. 82-531 of 22 June 1982 on the Higher Council for Nuclear Safety, 9:30788 (R;FR;In French)
DOE's safety and health oversight program at nuclear facilities could be strengthened, 9:31013 (R;US)

NUCLEAR FUEL CONVERSION
Conversion of a fertile substance into a fissile substance.
Limiting Values
Some neutron physical consequences of maximizing the conversion ratio of pressurized water reactors operated in the uranium-plutonium cycle, 9:30735 (J;US)
Optimization
Some neutron physical consequences of maximizing the conversion ratio of pressurized water reactors operated in the uranium-plutonium cycle, 9:30735 (J;US)

NUCLEAR FUEL ELEMENTS
See FUEL ELEMENTS

NUCLEAR FUELS
See also LIQUID METAL FUELS
MIXED CARBIDE FUELS
SPENT FUELS
Fission Product Release
Mechanistic prediction of iodine and cesium release from LWR fuel, 9:30856 (R;US)

NUCLEAR INDUSTRY
Decontamination
Liquid abrasive decontamination operating experience, 9:30841 (RA;US)
Fasteners
Bolting applications, 9:30811 (R;US)
Bolting applications, 9:30691 (R;US)

NUCLEAR INSTRUMENT MODULES
Equipment Interfaces
A standard digital data busing system for use with nim modules, 9:31438 (J;US)
Fastbus System
A FASTBUS processor interface using 68000 microprocessor, 9:31440 (J;US)
FASTBUS in Europe, status & plans, 9:31522 (J;US)
Specifications
Canberra view of nuclear data acquisition and analysis, 9:31621 (RA;AT)

NUCLEAR INSURANCE
1983 No. 919. The Nuclear Installations (Prescribed Sites) Regulations 1983, 9:30876 (R;GB)
Energy Act 1983, 9:30875 (R;GB)

NUCLEAR MAGNETIC RESONANCE
Recommendations
Nuclear magnetic resonance (NMR) guidelines, 9:31735 (R;US)

NUCLEAR MATERIALS DIVERSION
Comparative Evaluations
Risk assessment of alternative proliferation routes, 9:30406 (J;US)

NUCLEAR MATERIALS MANAGEMENT
Radioactive waste management as approached by nuclear materials management, 9:30396 (R;US)
Accounting
Decree of 4 November 1982 on conditions for notification of possession of special fissile materials and source materials and for keeping accounts thereof (Italy), 9:30398 (R;IT;In Italian)
Information for foreign nations, 9:30395 (R;US)
On-line plutonium measurement by alpha counting using a glass sensor, 9:30411 (TJ;US)
Order of 24 June 1982 on the technical conditions for controlling and accounting of nuclear materials (France), 9:30397 (R;FR;In French)
Plutonium determination by spectrophotometry of plutonium. VI. Control of the nuclear fuel reprocessing plant, 9:30409 (TJ;US)

NUCLEAR MATTER
Hartree-Fock Method
Nuclear matter calculations within the quasi-Hartree-Fock-theory, 9:32171 (RA;DE)
Hydrodynamic Model
Relativistic nuclear fluiddynamics coupled to classical meson fields, 9:32193 (RA;HU)
Phase Transformations
Equilibrium between anisotropic normal and pion condensed nuclear matter, 9:32191 (RA;HU)
Investigating the pairing phase transition in rapidly rotating deformed nuclei with heavy ion two-nucleon transfer reaction, 9:32173 (RA;DE)
Liquid-gas phase transition in nuclear matter, 9:32199 (RA;HU)
Pion Condensation
Equilibrium between anisotropic normal and pion condensed nuclear matter, 9:32191 (RA;HU)
Schroedinger Equation
Soliton type solutions in nuclear hydrodynamics, 9:32226 (R;SU;In Russian)
Solitons
Soliton type solutions in nuclear hydrodynamics, 9:32226 (R;SU;In Russian)
Statistical Mechanics
General theory of nuclear non-equilibrium systems. Statistical equations and 'nuclear hydrodynamics', 9:32159 (RA;DE)

NUCLEAR MEDICINE
See also RADIOLOGY
Radiation Protection
'new' Radiation Protection Ordinance - marking the difference between application of 'radioactive substances in medical research' (Section 41 StrlschV) and 'radioactive substances or ionizing radiation in medicine and dental medicine' (Section 42 StrlschV), 9:31738 (R;DE;In German)

NUCLEAR MODELS
See also COLLECTIVE MODEL
EVAPORATION MODEL
Yamaguchi Potential
Off-shell effects in nucleon-deuteron polarization observables, 9:32231 (R;AT)

NUCLEAR PHYSICS
Use only for indexing articles of very broad coverage, such as annual reviews, text books, etc.
General and nuclear physics, 9:32060 (R;UA;RU)
Experiment Planning
Proceedings of the third LAMPF II workshop. Volume 1, 9:31991 (R;US)
Proceedings of the third LAMPF II workshop. Volume 2, 9:31992 (R;US)
Meetings
Investigations in the field of relativistic nuclear physics. Proceedings, 9:32065 (R;SU;RU)
Proceedings of the third LAMPF II workshop. Volume 1, 9:31991 (R;US)
Proceedings of the third LAMPF II workshop. Volume 2, 9:31992 (R;US)
Research Programs
Annual report 1982, 9:32393 (R;BE)

Annual report 1982 of the Beschleunigerlaboratorium of Univ. and Technische Univ. Muenchen, 9:32063 (R;DE)
Nuclear Physics Division progress report. For the period 1st January to 31st December 1982, 9:31007 (R;GB)

NUCLEAR POTENTIAL
See also FISSION BARRIER
Mean-Field Theory
Inverse mean field method and solitons in nuclear physics, 9:32190 (RA;HU)

NUCLEAR POWER
Synopsis of the Annual Energy Review and Outlook, 1983, 9:30993 (R;US)
Comparative Evaluations
Risk of producing energy - and conserving it, 9:31015 (BA;GB)
Risk Assessment
Risk of producing energy - and conserving it, 9:31015 (BA;GB)

NUCLEAR POWER PLANTS
Accidents
Assessment of turbine-casing impact code calculations. Final report, 9:30870 (R;US)
Alarm Systems
Nuclear Power Plant Alarm Prioritization (NPPAP). Program status report, January 1, 1983-September 31, 1983, 9:30940 (R;US)
Control Rooms
Guidelines for an effective SPDS implementation program, 9:30960 (J;US)
Practical look at control panel enhancement, 9:30826 (J;US)
Decontamination
Effect of decontamination on radwaste, 9:30835 (RA;US)
Electrical Equipment
Potentially damaging failure modes of high- and medium-voltage electrical equipment, 9:30962 (J;US)
Engineered Safety Systems
Accelerated-aging tests for predicting radiation degradation of organic materials, 9:30961 (J;US)
Engineers
Alternative approaches to providing engineering expertise on shift, 9:30943 (R;US)
Fasteners
Bolting applications, 9:30691 (R;US)
Fuel Management
Optimization of fuel cycle strategies with constraints on uranium availability, 9:30792 (J;US)
Information Systems
Computerized plant maintenance management information systems overview for nuclear power plants, 9:30816 (J;US)
The use of historical data storage and retrieval systems at nuclear power plants, 9:30815 (J;US)
Load Management
Application of heat storage in increasing operating flexibility of newly built WWER type reactor power plants in the CSSR for peak electric power generation and for offsetting plant capacity decrease due to heat supply, 9:30793 (RA;CS;In Czech)
Optimization of fuel cycle strategies with constraints on uranium availability, 9:30792 (J;US)
Loss of Coolant
SOLA-LOOP analysis of a back pressure check valve, 9:30878 (R;US)
Low-Level Radioactive Wastes
Utility radwase volume reduction program at Northeast Utilities, 9:30837 (RA;US)
Man-Machine Systems
The use of historical data storage and retrieval systems at nuclear power plants, 9:30815 (J;US)
Operating Cost
The effect of plant reliability improvement in the cost of generating electricity, 9:30791 (J;US)
Performance
Nuclear unit operating experience: 1980 through 1982 update. Final report, 9:31012 (R;US)
Power Generation
Optimization of fuel cycle strategies with constraints on uranium availability, 9:30792 (J;US)
The effect of plant reliability improvement in the cost of generating electricity, 9:30791 (J;US)
Radiation Protection
Analysis of measurements with personnel dosimeters and portable instruments for determining neutron dose equivalent at nuclear power plants, 9:30926 (RA;US)
Considerations in factoring occupational dose into value-impact and cost-benefit analyses, 9:30928 (RA;US)
Preliminary results of testing bioassay analytical performance standards, 9:30927 (RA;US)
Radioactive Effluents
HERMES; regional radiological effects analysis. Software, 9:31674 (R;US)
Radioactive Waste Management
Waste management planning for outages, 9:30834 (RA;US)
Waste management planning, 9:30836 (RA;US)
Reactor Components
Controlling the quality of replacement parts in nuclear station, class 1E equipment, 9:30814 (J;US)
IPRDS: component histories and nuclear plant aging, 9:30714 (R;US)
Reactor Control Systems
Design of a generic interactive operator test station, 9:30825 (R;US)
Reactor Licensing
Control density of the administrative courts with regard to nuclear licensing, 9:30787 (R;DE;In German)
Reactor Maintenance
Computerized plant maintenance management information systems overview for nuclear power plants, 9:30816 (J;US)
Reactor Operators
Design of a generic interactive operator test station, 9:30825 (R;US)
Simulator fidelity and training effectiveness: a comprehensive bibliography with selected annotations, 9:30692 (R;US)
Reactor Safety
Concept development of the human reliability data bank, 9:30919 (RA;US)
Development of slim-maud: a multi-attribute utility approach to human reliability evaluation, 9:30916 (RA;US)
Estimation of human error probabilities from expert judgement for use in probabilistic risk assessment of nuclear power plants, 9:30917 (RA;US)
Fault diagnosis using artificial intelligence, 9:30921 (RA;US)
Maintenance personnel performance simulation (MAPPS): a model for predicting maintenance performance reliability in nuclear power plants, 9:30918 (RA;US)
Nuclear power safety reporting system feasibility analysis and concept description, 9:30920 (RA;US)
Reactor vital equipment determination techniques, 9:30922 (RA;US)
Reactor Simulators
Simulator fidelity and training effectiveness: a comprehensive bibliography with selected annotations, 9:30692 (R;US)
Reactor Sites
Evaluation of regulatory processes affecting nuclear power plant early site approval and standardization, 9:30832 (R;US)
Risk Assessment
SETS user's manual for accident sequence analysis (Set Equation Transformation System), 9:30934 (R;US)
SLIM-MAUD: an approach to assessing human error probabilities using structured expert judgment. Volume I. Overview of SLIM-MAUD, 9:30933 (R;US)
Safeguards
Reactor vital equipment determination techniques, 9:30922 (RA;US)
Seismic Effects
Engineering characterization of ground motion. Task I. Effects of characteristics of free-field motion on structural response, 9:31832 (R;US)
Site Selection
Site selection of nuclear power plants, 9:30845 (R;DE;In German)
Steam Systems
Proceedings: workshop on corrosion product sampling from hot water systems, 9:30693 (R;US)

Sampling for corrosion products in high pressure fossil-fuel boilers: a literature survey, 9:30690 (RA;US)
Sampling water by membrane filtration for suspended solids in steam generating systems, 9:30689 (RA;US)
The effect of plant reliability improvement in the cost of generating electricity, 9:30791 (J;US)
Turbines
Assessment of turbine-casing impact code calculations. Final report, 9:30870 (R;US)

OIL SANDS
Crushing
Santa Rosa Oil Sands Project. Final technical report, 9:30270 (R;US)
Electric Conductivity
Measurement of frontal instability of two phase immiscible displacement in tar sands at reservoir conditions, 9:30271 (R;US)
In-Situ Combustion
Biological oxidation of organic constituents in tar-sand combustion-process water, 9:30276 (J;US)
Process Heat
Nuclear energy for oil sands. A technical and economic feasibility study, 9:30794 (RA;CA)
Research Programs
Summary of university contracts and grants supported by the Office of Fossil Energy, FY 1983, 9:30120 (R;US)
Summary of AR and TD/APT contracts and grants supported by the Office of Fossil Energy FY 83, 9:30121 (R;US)
Surface Mining
Santa Rosa Oil Sands Project. Final technical report, 9:30270 (R;US)
OIL SHALE DEPOSITS
Resource Potential
National Petroleum Council study on unconventional gas, 9:30256 (BA;US)
Seismic Surveys
Seismic evaluation of NOSR 2. Naval Oil Shale Reserves management support and systems engineering project (Utah), 9:30265 (R;US)
OIL SHALE PROCESSING PLANTS
Health Hazards
Hydrocarbon-induced cancer risks in oil shale processing, 9:30274 (R;US)
Risk Assessment
Hydrocarbon-induced cancer risks in oil shale processing, 9:30274 (R;US)
OIL SHALE WASTE WATER
See OIL SHALES
WASTE WATER
OIL SHALES
See also BLACK SHALES
Fragmentation
Summary of the oil shale fragmentation program at Anvil Points Mine, Colorado, 9:30266 (R;US)
Heat Transfer
Mass and heat transfer in crushed oil shale, 9:30273 (R;US)
In-Situ Retorting
Reaction kinetics for modeling oil shale retorting, 9:30272 (J;US)
Mass Transfer
Mass and heat transfer in crushed oil shale, 9:30273 (R;US)
Modified In-Situ Processes
Summary of the oil shale fragmentation program at Anvil Points Mine, Colorado, 9:30266 (R;US)
Pyrolysis
Construction and operation of a pilot plant for further development of the LR-process, 9:30267 (R;DE;In German)
Research Programs
Summary of university contracts and grants supported by the Office of Fossil Energy, FY 1983, 9:30120 (R;US)
Summary of AR and TD/APT contracts and grants supported by the Office of Fossil Energy FY 83, 9:30121 (R;US)
Retorting
Conceptual process designs: Lurgi-Ruhrgas and superior circular grate, 9:30269 (R;US)
Reaction kinetics for modeling oil shale retorting, 9:30272 (J;US)
OIL WELLS
Waterflooding
Investigation on the suitability of polymer solutions for increasing the degree of petroleum displacement, 9:30232 (R;DE;In German)
Well Drilling
Shock mounted Stratapax oil well drilling bits. Final technical report, 9:30228 (R;US)
OKLAHOMA
Oil Sand Deposits
Tar-sand potential of selected areas in Carter and Murray Counties, South-Central Oklahoma, 9:30264 (R;US)
OLEFINS
See ALKENES
OMEGA FACILITY
Extreme Ultraviolet Radiation
Extreme ultraviolet spectra of highly ionized Ge, Kr and Mo emitted by imploding plasmas, 9:32345 (R;US)
Measurements of spatially resolved high resolution spectra of laser-produced plasmas. FY 83 annual report, 9:32344 (R;US)

Optical Spectrometers
Measurements of high resolution spectra on the Omega laser at Rochester University. FY 82 annual report, 9:32343 (R;US)

ONCOGENIC TRANSFORMATIONS
Biochemistry
Mechanisms of radiation-induced neoplastic cell transformation, 9:31789 (R;US)
Radioinduction
Mechanisms of radiation-induced neoplastic cell transformation, 9:31789 (R;US)
Response Modifying Factors
Modifiers of free radicals inhibit in vitro the oncogenic actions of x-rays, bleomycin, and the tumor promoter 12-0-tetradecanoylphorbol 13-acetate, 9:31758 (RA;US)

ON-LINE MEASUREMENT SYSTEMS
Comparative Evaluations
Continuous α-measurement in the process solutions of a reprocessing plant. Comparison of two commercial devices, 9:30299 (TJ;US)

ONTARIO
Radiometric Surveys
Uraniferous pegmatites of the Sharlot Lake area, Ontario, 9:31854 (RA;CA)

OPERATION (REACTOR)
See REACTOR OPERATION

OPTICAL FIBERS
Beam Optics
Precision translator, 9:31450 (P;US)
Coatings
Progress in the development of scintillating optical fibers, 9:31593 (J;US)
Drawing
Progress in the development of scintillating optical fibers, 9:31593 (J;US)
Scintillations
Progress in the development of scintillating optical fibers, 9:31593 (J;US)

OPTICAL MODELS
Computer Codes
Heavy ion elastic scattering code : OPTHI, 9:32157 (R;IN)

OPTICAL SPECTROMETERS
Design
Measurements of high resolution spectra on the Omega laser at Rochester University. FY 82 annual report, 9:32343 (R;US)

OPTICAL SYSTEMS
Meetings
Rutherford Appleton Laboratory symposium on new techniques in x-ray and xuv optics, 29th-30th July 1982, Abingdon, 9:31628 (R;GB)

OPTICALLY THIN PLASMA
Cyclotron Radiation
Second harmonic electron cyclotron emission studies of Tokapole-II plasmas, 9:32308 (R;US)

ORBITAL SOLAR POWER PLANTS
Antennas
High accuracy radiation efficiency measurement techniques. Final technical report, 9:31428 (R;US)
Meetings
Final report of the SPS energy conversion and power management workshop, February 5-7, 1980, Von Braun Civic Center, Huntsville, Alabama, 9:30524 (R;US)
Microwave Power Transmission
Electrostatic protection of the solar power satellite and rectenna. Part II. Lightning protection of the rectenna, 9:30528 (R;US)
Solid state SPS microwave generation and transmission study. Volume II. Phase II final report, appendices, 9:30527 (R;US)
Photovoltaic Power Plants
Final report of the SPS energy conversion and power management workshop, February 5-7, 1980, Von Braun Civic Center, Huntsville, Alabama, 9:30524 (R;US)
Solar Thermal Power Plants
Final report of the SPS energy conversion and power management workshop, February 5-7, 1980, Von Braun Civic Center, Huntsville, Alabama, 9:30524 (R;US)
Space Transport
Final report of the SPS space transportation workshop, 9:30522 (R;US)

OREGON
Marshes
Ecology of tidal marshes of the Pacific Northwest Coast: a community profile, 9:31699 (R;US)

ORGAN CULTURES
See TISSUE CULTURES

ORGANIC COMPOUNDS
See also AROMATICS
ESTERS
HYDROCARBONS
LIPIDS
ORGANIC HALOGEN COMPOUNDS
ORGANIC NITROGEN COMPOUNDS
ORGANIC POLYMERS
ORGANIC SULFUR COMPOUNDS
ORGANOMETALLIC COMPOUNDS
Adsorption
Surface-enhanced Raman scattering on silver-coated teflon sphere substrates, 9:31304 (J;NL)

ORGANIC FLUORINE COMPOUNDS
Molecular Structure
Trifluoromethanesulfonyl chloride for identification of oxygen, nitrogen, and sulfur functional groups by fluorine-19 nuclear magnetic resonance spectrometry, 9:31305 (J;US)
Synthesis
Rapid stereoselective synthesis of fluorinated carbohydrates. Addition of acetyl hypofluorite to vinyl ether derivatives of sugars, 9:31324 (R;CA)

ORGANIC HALOGEN COMPOUNDS
See also ORGANIC FLUORINE COMPOUNDS
Hot Atom Chemistry
Cage effect in recoil studies, 9:31361 (R;HU)

ORGANIC ION EXCHANGERS
Radiation Effects
EPICOR-II resin characterization and proposed methods for degradation analysis, 9:31334 (R;US)

ORGANIC NITROGEN COMPOUNDS
Excluding PROTEINS, AMINES, ALKALOIDS, AMINO ACIDS, NUCLEIC ACIDS, and NUCLEOTIDES.
See also AZINES
NITRO COMPOUNDS
OXIMES
THIONINE
Removal
Hydroconversion of organic nitrogen compounds on refining catalysts, 9:30236 (R;DE;In German)

ORGANIC POLYMERS
See also POLYESTERS
RESINS
Physical Radiation Effects
Accelerated-aging tests for predicting radiation degradation of organic materials, 9:30961 (J;US)

ORGANIC SOLVENTS
Chemical Composition
Coal conversion with nondonor solvents: comparison with process solvents, 9:30102 (R;US)
Comparative Evaluations
Coal conversion with nondonor solvents: comparison with process solvents, 9:30102 (R;US)
Hydrogenation
Solvent tailoring in coal liquefaction. Quarterly report, January 1984-March 1984, 9:30134 (R;US)

ORGANIC SULFUR COMPOUNDS
See also METHIONINE
THIONINE
THIOPHENE
Molecular Structure
Trifluoromethanesulfonyl chloride for identification of oxygen, nitrogen, and sulfur functional groups by fluorine-19 nuclear magnetic resonance spectrometry, 9:31305 (J;US)

ORGANIC WASTES
See also AGRICULTURAL WASTES
Pyrolysis
Conversion of organic wastes to unleaded, high-octane gasoline, 9:30472 (R;US)

ORGANOMETALLIC COMPOUNDS
For compounds of metals and semimetals with organic compounds, but only when the metal or semimetal is directly bound to carbon.
Chemical Preparation
Preparation and properties of some new organometallic compounds of actinides, 9:31351 (RA;IL)
Chemical Reactions
Reactivity of $M(NEt_2)_4$ towards cyclopentadiene. Synthesis, characterization and reactivity of some MCpsub(n)(NEt2)sub(4-n) (M = U(IV)) and Th(IV), 9:31352 (RA;IL)
Electronic Structure
Pseudotetrahedral versus related trigonal bipyramidal organouranium (IV) - complexes. Interrelations of molecular and electronic structure, 9:31341 (RA;IL)
Molecular Structure
Pseudotetrahedral versus related trigonal bipyramidal organouranium (IV) - complexes. Interrelations of molecular and electronic structure, 9:31341 (RA;IL)
Structural Chemical Analysis
Reactivity of $M(NEt_2)_4$ towards cyclopentadiene. Synthesis, characterization and reactivity of some MCpsub(n)(NEt2)sub(4-n) (M = U(IV)) and Th(IV), 9:31352 (RA;IL)
Synthesis
Reactivity of $M(NEt_2)_4$ towards cyclopentadiene. Synthesis, characterization and reactivity of some MCpsub(n)(NEt2)sub(4-n) (M = U(IV)) and Th(IV), 9:31352 (RA;IL)
ORNL
Computer Networks
Local area networks: applications in the Instrumentation and Controls Division at Oak Ridge National Laboratory, 9:32406 (R;US)
ORNL RESEARCH REACTOR
See ORR REACTOR
ORR REACTOR
Reactor Experimental Facilities
PSF blind test SSC, SPVC, and SVBC physics-dosimetry-metallurgy data packages, 9:30704 (R;US)
OSCILLATIONS (PLASMA)
See PLASMA WAVES
OSCILLOGRAPHS
Design
Construction of a broadband universal sampling head, 9:31590 (J;US)
Performance
Construction of a broadband universal sampling head, 9:31590 (J;US)
OSMIUM COMPLEXES
Photochemical Reactions
Photochemical conversion of $H_2Os_3(CO)_{10}$(p-donor) to $H_2Os_3(CO)_9$(p-donor) in solution and on high surface area silica. Interim technical report, 9:31327 (R;US)
OSMIUM ISOTOPES
Deformed Nuclei
Triaxial ground state deformations in transitional nuclei, 9:32137 (RA;DE;In German)
OUTER CONTINENTAL SHELF
See CONTINENTAL SHELF
OVENS
Control Systems
Environmental and energy benefits of microprocessor control of oven airflows from metal painting operations, 9:31085 (R;US)
OVERBURDEN
Magnetic Properties
Remanent and rock magnetic properties at the Hanna, Wyoming underground coal gasification site: Hanna II phases 2 and 3 experiment, 9:30117 (R;US)
OXETANE
See ETHERS
OXIDATION
See also COMBUSTION
Catalysis
Oxidation effects of hydrogen peroxide catalyzed by photosensitized uranyl, 9:31360 (RA;IL;In French)
OXIDES
See also ALUMINIUM OXIDES
COBALT OXIDES
COPPER OXIDES
IRIDIUM OXIDES
IRON OXIDES
LITHIUM OXIDES
MAGNESIUM OXIDES
NEODYMIUM OXIDES
NEPTUNIUM OXIDES
NICKEL OXIDES
NITROGEN OXIDES
PALLADIUM OXIDES
PLUTONIUM OXIDES
THORIUM OXIDES
TITANIUM OXIDES
TUNGSTEN OXIDES
URANIUM OXIDES
YTTRIUM OXIDES
ZIRCONIUM OXIDES
Surface Potential
Surface oxygen chemical potential in a gas-solid reaction, 9:30983 (J;US)
OXIMES
Nitration
Nitration of oximes. The nitration of azines. Final technical report, 5 Dec 49-4 Dec 51, 9:31313 (R;US)
OXYGEN
Activation Analysis
Determination of oxide film thickness on aluminium using 14-MeV neutron activation and BET method, 9:31297 (RA;SU)
Alpha Reactions
Interaction of 2.1 GeV/c/n alpha particles with light and heavy nuclei, 9:32080 (RA;HU)
Atom-Molecule Collisions
Temperature dependence of the de-excitation rate constants of excited rare gas atoms by atoms and molecules, 9:31949 (RA;AT)
Electron Drift
Swarm experiments in gas mixtures, 9:31912 (RA;AT)
Ion-Molecule Collisions
Collisions of singly and doubly charged ions with oxygen molecules in the energy range 1 - 1800 (3600) eV, 9:31903 (RA;AT)
Energy dependence of the clustering reactions of Li^+ ions with some atmospheric gases, 9:31923 (RA;AT)
Temperature dependences of the $N_2^+ + N_2 \rightarrow N_4^+$ and $O_2^+ + O_2 \rightarrow O_4^+$ association reactions, 9:31924 (RA;AT)
Temperature dependence of three-body ion-molecule reactions, 9:31926 (RA;AT)
Photochemical Reactions
Excitation spectrum of the chemical reaction F_2+O_2 in the red spectral range, 9:31329 (J;US)
Surface Potential
Surface oxygen chemical potential in a gas-solid reaction, 9:30983 (J;US)
OXYGEN 16 REACTIONS
Inelastic Scattering
Inelastic excitation of giant resonances by 400-MeV ^{16}O, 9:32145 (J;US)
OXYGEN 18
Energy Levels
Time-dependent Hartree-Fock picture of nuclear molecular resonances, 9:32096 (J;NL)
OXYGEN COMPOUNDS
See also ALUMINATES
MOLYBDATES
NIOBATES
NITRATES
OXIDES
PEROXIDES
PERTECHNETATES
SULFATES
WATER
Quantity Ratio
Similarity of some organic compounds in spark-ignition and diesel engine particulate extracts, 9:31666 (J;US)
OXYGEN EFFECT (RADIOBIOLOGY)
See OXYGEN

OXYGEN HYDRIDES
See WATER
OXYGEN IONS
Chemical Reaction Kinetics
Temperature dependences of the $N_2i + N_2 \rightarrow N_4^+$ and $O_2^+ + O_2 \rightarrow O_4^+$ association reactions, 9:31924 (RA;AT)
De-Excitation
Vibrational relaxation of molecular ions in flow-drift tubes, 9:31921 (RA;AT)
Ion-Molecule Collisions
Drift tube measurements of the temperature dependence of ion association reactions in atmospheric gases. Product ion yields of reactions in methane, 9:31927 (RA;AT)
Reaction of O_2^+ ions with CH_4, 9:31916 (RA;AT)
Temperature dependences of the $N_2^+ + N_2 \rightarrow N_4^+$ and $O_2^+ + O_2 \rightarrow O_4^+$ association reactions, 9:31924 (RA;AT)
Temperature dependence of three-body ion-molecule reactions, 9:31926 (RA;AT)
Recombination
Measurements of the dissociative recombination coefficients for O_2^+, NH_4^+, H_3O^+ and NO^+ at thermal energies, 9:31943 (RA;AT)
Vibrational States
Vibrational relaxation of molecular ions in flow-drift tubes, 9:31921 (RA;AT)
OXYGEN METERS
Solid electrolyte oxygen sensor for aircraft hazard protection applications. Final report, 26 Jan-26 Nov 76, 9:31614 (R;US)
OXYGEN PLANTS
Operating Cost
Low-purity oxygen production study. Final report, 9:30143 (R;US)
OXYMETHYLENE
See FORMALDEHYDE
OZONE
Biological Effects
Impact of ozone on yield of three cultivars of winter wheat, 9:31647 (RA;US)
Impact of ozone on yield of grain sorghum, 9:31648 (RA;US)

P

PAH
See POLYCYCLIC AROMATIC HYDROCARBONS
PAINTS
Curing
Environmental and energy benefits of microprocessor control of oven airflows from metal painting operations, 9:31085 (R;US)
PALLADIUM
Corrosive Effects
Fission product Pd-SiC interaction in irradiated coated-particle fuels, 9:30746 (J;US)
Electronic Structure
Linear augmented-Slater-type-orbital method for electronic-structure calculations, 9:32262 (J;US)
Oxidation
Role of sintering in the oxidation-reduction of palladium powders, 9:31147 (R;US)
Sintering
Role of sintering in the oxidation-reduction of palladium powders, 9:31147 (R;US)
Solvent Extraction
Substoichiometric determination of Pd-II-traces with dithizone and problems of determination, 9:31298 (RA;SU)
PALLADIUM ALLOYS
Electronic Structure
Calculated low-field Hall coefficient of Ag/sub x/Pd/sub 1-x/ alloys, 9:31206 (J;US)
Hall Effect
Calculated low-field Hall coefficient of Ag/sub x/Pd/sub 1-x/ alloys, 9:31206 (J;US)
Magnetoresistance
Magnetoresistance of Pd-Fe and Pd-Ni-Fe alloys, 9:31170 (RA;BR)
Magnetostriction
Magnetostriction of Pd-Fe alloys and the split band model, 9:31167 (RA;BR)
PALLADIUM COMPOUNDS
See also PALLADIUM HYDRIDES
PALLADIUM OXIDES
PALLADIUM SILICIDES
Chemical Analysis
Substoichiometric determination of Pd-II-traces with dithizone and problems of determination, 9:31298 (RA;SU)
Electronic Structure
Self-consistent model calculation of the electronic structure of ordered, disordered and hydrogenated Pd_3Fe, 9:31159 (RA;BR)
PALLADIUM HYDRIDES
Moessbauer Effect
^{57}Fe Moessbauer investigation of the ternary hydride Pd_3FeH sub(x), 9:31225 (RA;BR)
PALLADIUM OXIDES
Reduction
Role of sintering in the oxidation-reduction of palladium powders, 9:31147 (R;US)
PALLADIUM SILICIDES
Antiferromagnetism
Magnetic ordering in CeM_2Si_2 (M = Ag,Au,Pd,Rh) compounds as studied by neutron diffraction, 9:31272 (J;US)
PALO DURO BASIN
Exploratory Wells
Pumping test and fluid sampling report - Sawyer No. 1 well, Palo Duro Basin, Texas: unanalyzed data, 9:30316 (R;US)
Well completion report - Sawyer No. 1 (PD-3) well, Palo Duro Basin, Texas: unanalyzed data, 9:30313 (R;US)
Well completion report - Detten No. 1 (PD-6) well, Palo Duro Basin, Texas: unanalyzed data, 9:30314 (R;US)
Well completion report - Zeeck No. 1 (PD-7) well, Palo Duro Basin, Texas: unanalyzed data, 9:30315 (R;US)
Hydrology
Pumping test and fluid sampling report - Sawyer No. 1 well, Palo Duro Basin, Texas: unanalyzed data, 9:30316 (R;US)
Salt Deposits
Pumping test and fluid sampling report - Sawyer No. 1 well, Palo Duro Basin, Texas: unanalyzed data, 9:30316 (R;US)
Well completion report - Sawyer No. 1 (PD-3) well, Palo Duro Basin, Texas: unanalyzed data, 9:30313 (R;US)
Well completion report - Detten No. 1 (PD-6) well, Palo Duro Basin, Texas: unanalyzed data, 9:30314 (R;US)
Well completion report - Zeeck No. 1 (PD-7) well, Palo Duro Basin, Texas: unanalyzed data, 9:30315 (R;US)
PAPER INDUSTRY
Boilers
Risk analysis of a black liquor recovery boiler plant, 9:31094 (R;FI;In Finnish)
Risk Assessment
Risk analysis of a black liquor recovery boiler plant, 9:31094 (R;FI;In Finnish)
PARADOX BASIN
Ground Water
First status report on regional ground-water flow modeling for the Paradox Basin, Utah, 9:30312 (R;US)
Hydrology
First status report on regional ground-water flow modeling for the Paradox Basin, Utah, 9:30312 (R;US)
PARAFFINS
See ALKANES
PARAHO PROCESS
Evaluation
Conceptual process designs: Union B, Paraho, and Tosco II. Naval Oil Shale Reserves management support and systems engineering project, 9:30268 (R;US)
PARALLEL PROCESSING
An interactive parallel processor for data analysis, 9:32425 (J;US)
PARAMAGNETIC RESONANCE (NUCLEAR)
See NUCLEAR MAGNETIC RESONANCE

PARAMETRIC INSTABILITIES
Nonlinear saturation of the parametric instability for three coupled oscillators, 9:32302 (R;US)
PARTIAL WAVES
Form Factors
Generating function for a class of effective Chew-Mandelstam functions, 9:32282 (R;CA)
PARTICLE TRACKS
Mathematical Models
Calculations of microdosimetric quantities, 9:31333 (RA;US)
Computational details of the Monte Carlo simulation of proton and electron tracks, 9:31332 (RA;US)
PARTICLE-INDUCED X-RAY EMISSION ANALYSIS
See X-RAY EMISSION ANALYSIS
PARTICULATES
Prior to September 1981, this concept was indexed to PARTICLES and AEROSOLS.
Emission
Assessment of hydrocarbon and particulate emissions control and wastewater treatment technology for the solvent refined coal-II process. Volume I. Executive summary, 9:30180 (R;US)
Assessment of hydrocarbon and particulate emissions control and wastewater treatment technology for the Solvent Refined Coal-II process. Volume II. Technical report, 9:30181 (R;US)
Toxicity
Walk-thru survey report: Manville Products Corporation/Manville at Lompoc, California, 9:31821 (R;US)
PASSIVE SOLAR COOLING SYSTEMS
Performance Testing
Passive and low energy research and development: a global view, 9:30557 (R;US)
Research Programs
Passive and low energy research and development: a global view, 9:30557 (R;US)
PASSIVE SOLAR HEATING SYSTEMS
See also DIRECT GAIN SYSTEMS
TROMBE WALLS
Computerized Simulation
Passive solar commercial buildings project. Project status report, January 1-January 31, 1984, 9:30548 (R;US)
Mathematical Models
Scaling relations for the performance of passive systems, 9:30560 (J;GB)
Performance
Scaling relations for the performance of passive systems, 9:30560 (J;GB)
Performance Testing
Passive and low energy research and development: a global view, 9:30557 (R;US)
Research Programs
Passive and low energy research and development: a global view, 9:30557 (R;US)
PATENTS
Use only for items about patents, not for items which are patents.
Bibliographies
DOE patents available for licensing. A bibliography for the period 1966-1974. Supplement 1, 9:32395 (R;US)
PATHOGENS
Monitoring
Process to ferment food waste and monitor the effect on harmful organisms, 9:31116 (BA;US)
PCB
See CHLORINATED AROMATIC HYDROCARBONS
PDX DEVICES
Beta Ratio
Studies of thermal energy confinement scaling in PDX plasmas: $D^0 \rightarrow H^+$ limiter discharges, 9:32318 (R;US)
Limiters
Characterization of impurities deposited on the PDX graphite rail limiter, 9:32365 (R;US)
Plasma Confinement
Studies of thermal energy confinement scaling in PDX plasmas: $D^0 \rightarrow H^+$ limiter discharges, 9:32318 (R;US)
PEA PLANT
See PISUM
PEACHES
Food Processing
Caustic dry peeling of cling peaches to reduce water pollution: its economic feasibility. Agricultural economic report, 9:31711 (R;US)
PEAK LOAD
Load Analysis
Selected statistical methods for analysis of load research data. Final report, 9:31036 (R;US)
PEAK POWER
See PEAK LOAD
PEAT
Gasification
Gasification of indigenous fuels and the use of gas at commercial greenhouses, 9:31098 (R;FI;In Finnish)
Hydrogenation
Experiments on the extraction of fuels in aqueous suspension at under to over critical conditions, 9:30147 (R;DE;In German)
Sampling
Development of sampling method for milled peat, 9:30166 (R;FI;In Finnish)
PEBBLE BED REACTORS
Fuel Spheres
Neutron streaming in pebble beds, 9:30752 (J;US)
Reactor Cores
Neutron streaming in pebble beds, 9:30752 (J;US)
PEGMATITES
Petrochemistry

PETROLEUM INDUSTRY
Statistical Data
Petroleum supply annual 1983. Volume 1, 9:30241 (R;US)

PETROLEUM PRODUCTS
See also DIESEL FUELS
FUEL OILS
GASOLINE
Energy Consumption
Petroleum supply annual 1983. Volume 1, 9:30241 (R;US)
Energy Demand
Petroleum supply annual 1983. Volume 1, 9:30241 (R;US)
Energy Supplies
Petroleum supply annual 1983. Volume 1, 9:30241 (R;US)
Exports
Petroleum supply annual 1983. Volume 1, 9:30241 (R;US)
Imports
Petroleum supply annual 1983. Volume 1, 9:30241 (R;US)
Prices
State energy price and expenditure report, 1970-1981, 9:30242 (R;US)
Supply and Demand
Annual petroleum review. Volume 1, 9:30248 (R;US)
Annual petroleum review. 1982 annual report to the Legislature. Volume 2, 9:30249 (R;US)

PETROLEUM REFINERIES
Occupational Safety
Control technology assessment of petroleum refinery operations: indepth site visit report, Sigmor Three Rivers Refinery, 9:30237 (R;US)

PETT
See POSITRON COMPUTED TOMOGRAPHY

PFR REACTOR
Specifications
Dounreay, 9:30766 (R;GB)

PH VALUE
Biological Effects
Acid extracellular environment inhibits the fixation of radiation damage, 9:31762 (RA;US)
Measuring Instruments
Development of a high temperature pH electrode for geothermal fluids. Final report, Task 1, 9:30586 (R;US)

PHASE TRANSFORMATIONS
See also EVAPORATION
Computerized Simulation
Kinetics of a first-order phase transition: Computer simulations and theory, 9:32292 (J;US)
Mathematical Models
Lagrangian coordinates for moving boundary problems, 9:32297 (J;US)
Moving-Boundary Conditions
Lagrangian coordinates for moving boundary problems, 9:32297 (J;US)

PHENOLS
Biodegradation
Fixed-film, fluidized-bed bioreactors for biooxidation of coal gasification wastewaters, 9:30169 (R;US)
Oxidation
Fixed-film, fluidized-bed bioreactors for biooxidation of coal gasification wastewaters, 9:30169 (R;US)
Removal
Laboratory tests of phenol removal and ammonia and hydrogen sulfide stripping from SRC-I wastewater. Final technical report, 9:30132 (R;US)

PHENYLETHYLENE
See STYRENE

PHOSPHORIC ACID
Corrosive Effects
Corrosion of phosphoric acid fuel cell stack components, 9:31049 (J;US)

PHOSPHORUS
Autoradiography
Quantitative autoradiography of semiconductor basic materials, 9:31300 (RA;SU)

PHOSPHORUS 26
Beta-Plus Decay
Study of beta-delayed two-proton emission in ^{22}Al and ^{26}P and search for new emitters, 9:32099 (R;US)
Delayed Protons
Study of beta-delayed two-proton emission in ^{22}Al and ^{26}P and search for new emitters, 9:32099 (R;US)

PHOTOANODES
Aging
BP-stabilized n-Si and n-GaAs photoanodes, 9:30520 (J;US)
Energy Levels
BP-stabilized n-Si and n-GaAs photoanodes, 9:30520 (J;US)
Heterojunctions
BP-stabilized n-Si and n-GaAs photoanodes, 9:30520 (J;US)
Spectral Response
BP-stabilized n-Si and n-GaAs photoanodes, 9:30520 (J;US)
Stabilization
BP-stabilized n-Si and n-GaAs photoanodes, 9:30520 (J;US)

PHOTOCATHODES
Light Transmission
X-ray transmission photocathode sensitivies at $\lambda = 0.266$ μm, 9:31633 (J;US)
Photosensitivity
X-ray transmission photocathode sensitivies at $\lambda = 0.266$ μm, 9:31633 (J;US)

PHOTOCONDUCTORS
Pulse Shapers
Distortion and pulse shaping of short electrical pulses from dispersion of microstrip lines, 9:31587 (J;US)
Signal Distortion
Distortion and pulse shaping of short electrical pulses from dispersion of microstrip lines, 9:31587 (J;US)

PHOTODISINTEGRATION
See PHOTONUCLEAR REACTIONS

PHOTOGRAPHIC FILM DOSEMETERS
Comparative Evaluations
Beta- and gamma-dose measurements of the Godiva IV Critical Assembly, 9:32257 (J;GB)

PHOTOIONIZATION
Molecular Models
Resonances in electron-molecule scattering and photoionization, 9:31952 (R;US)

PHOTOLYSIS
Research Programs
Investigations on multiphoton ionization and fast-beam photodissociation spectroscopy. Progress report, 9:31328 (R;US)

PHOTOMAGNETIC EFFECT
See VISIBLE RADIATION

PHOTOMAGNETOELECTRIC EFFECT
See MAGNETIC FIELDS

PHOTON ACTIVATION ANALYSIS
See ACTIVATION ANALYSIS
PHOTONS

PHOTON BEAMS
Beam Optics
Precision translator, 9:31450 (P;US)
Focusing
Precision translator, 9:31450 (P;US)

PHOTON DETECTION (GAMMA)
See GAMMA DETECTION

PHOTON DETECTION (X-RAY)
See X-RAY DETECTION

PHOTON TRANSPORT
Discrete Ordinate Method
Recommendations for a production discrete-ordinates coupled electron-photon transport capability, 9:32250 (R;US)

PHOTON-PROTON INTERACTIONS
Photoproduction
Polarization measuring for proton of recoil in the $\gamma + p \rightarrow p + \pi^0$ reaction at Esub(γ)=0,65-1,4 GeV for the angles THETAsub(π) < 90 deg in the center-of-mass system, 9:31988 (RA;SU;In Russian)

Polarization-Asymmetry Ratio
Polarization parameters Σ, T, P for the $\gamma p \rightarrow p\pi^0$ reaction in the 280-450 MeV photon energy range, 9:31989 (RA;SU;In Russian)

PHOTONS
Mass
Thermal effects on the photon mass, 9:32027 (R;CA)

PHOTONUCLEAR REACTIONS
Breakup Reactions
Photodisintegration of the ^{11}B nucleus, 9:32082 (RA;SU;In Russian)
Photoproduction
Energy spectra of positrons and electrons produced in lead target by bremsstrahlung beam, 9:32141 (RA;SU;In Russian)
M1 suppression in pion photoproduction on ^{13}C, 9:32008 (R;CA)

PHOTOSYNTHESIS
Mathematical Models
Photo/biological hydrogen subprogram, 9:30439 (RA;US)

PHOTOSYNTHETIC BACTERIA
Screening
Photo/biological hydrogen subprogram (Rhodopseudomonas, Chlamydomonas, Escherichia Anabaena), 9:30439 (RA;US)

PHOTOVOLTAIC CELLS
See also SOLAR CELLS
Coordinated Research Programs
United States Federal Photovoltaic Program status, 9:30517 (BA;NL)

PHOTOVOLTAIC CONVERSION
Bibliographies
SERI photovoltaics advanced research and development: FY 1983 accomplishments, 9:30515 (R;US)
Research Programs
SERI photovoltaics advanced research and development: FY 1983 accomplishments, 9:30515 (R;US)

PHOTOVOLTAIC POWER PLANTS
Coordinated Research Programs
United States Federal Photovoltaic Program status, 9:30517 (BA;NL)
Economic Analysis
Analysis of a photovoltaic dwelling in remote sites, 9:30525 (R;FR;In French)
Sizing
Analysis of a photovoltaic dwelling in remote sites, 9:30525 (R;FR;In French)

PHOTOVOLTAIC POWER SUPPLIES
Demonstration Programs
A review of the experiences of the U.S. Department of Energy photovoltaic residential experiment stations, 9:30518 (BA;NL)
Design
McClellan PV system installation provides key lessons, 9:30523 (R;US)
Economic Analysis
Study of photovoltaic systems adapted to dwellings connected to the electric network, 9:30526 (R;FR;In French)
Energy Storage
Battery storage in residential applications of energy from photovoltaic sources, 9:30529 (J;GB)
Interconnected Power Systems
Study of photovoltaic systems adapted to dwellings connected to the electric network, 9:30526 (R;FR;In French)
Performance Testing
McClellan PV system installation provides key lessons, 9:30523 (R;US)

PHYSICAL PROTECTION
Concerning the need for physical protection of facilities, devices, or materials from intentional damage or theft, and proposed or existing methods for meeting needs. See also PHYSICAL PROTECTION DEVICES.
Set Theory
Boolean computation of optimum hitting sets, 9:32419 (R;US)

PHYSICAL RADIATION EFFECTS
Research Programs
Progress report: Chemistry and Materials Division, 1982 January 1 to March 31, 9:31330 (R;CA)

PHYSICS
See also HIGH ENERGY PHYSICS
NUCLEAR PHYSICS
REACTOR PHYSICS
Research Programs
International Centre for Theoretical Physics: scientific activities in 1982, 9:31010 (R;AT)

PIGE ANALYSIS
See NUCLEAR REACTION ANALYSIS
PROTON REACTIONS

PINES
Irrigation
Biological sludge from synthetic fiber manufacturing plants as a soil amendment, 9:31102 (BA;US)
Plant Growth
Biological sludge from synthetic fiber manufacturing plants as a soil amendment, 9:31102 (BA;US)

PINS (FUEL)
See FUEL PINS

PION BEAMS
Depth Dose Distributions
Irradiation planning and dosimetry with πp mesons, 9:32256 (R;DE;In German)

PION CONDENSATION
Fluctuations
Fluctuations and defects in pion condensates and a possible new phase, 9:32192 (RA;HU)

PION MINUS-PROTON INTERACTIONS
Elastic Scattering
Study on the elastic π^{+-}p interactions at 40 GeV/c in the impact parameter representation, 9:31985 (R;SU;In Russian)
Inclusive Interactions
MPS II drift chamber system, 9:31595 (J;NL)
Particle Decay
Observation of a structure in PHIπ^0 mass spectrum, 9:31986 (R;SU)
Particle Production
Glueballs and beyond, 9:32013 (R;US)

PION PLUS REACTIONS
Breakup Reactions
Energy dependent partial wave analysis of the PI+d→pp reaction in the region $\sqrt{s}$=2.09-2.42 GeV, 9:32072 (RA;HU)
Study of the differential cross section of the PI+d→pp reaction at pion energies 280, 300, 330, 357, 390, 420 and 450 MeV, 9:32071 (RA;SU)
Knock-Out Reactions
Energy dependence of the $^6Li(\pi^+,{}^3He)^3He$ reaction at 60, 75 and 90 MeV, 9:32091 (R;CA)
Particle Production
Inclusive eta meson production by positive hadrons with the momentum of 10.5 GeV/c, 9:31984 (R;SU;In Russian)
Inclusive neutral pion production in interactions of positive particles with beryllium nuclei at 10.5 GeV/c, 9:31983 (R;SU;In Russian)

PION PLUS-PROTON INTERACTIONS
Elastic Scattering
Study on the elastic π^{+-}p interactions at 40 GeV/c in the impact parameter representation, 9:31985 (R;SU;In Russian)

PION REACTIONS
See also PION PLUS REACTIONS
Capture
Nuclear (π,p) reaction is consistent with a 2N absorption process, 9:32233 (J;US)
Charge-Exchange Reactions
Transition density for single charge-exchange scattering of pions, 9:32189 (RA;HU)
Elastic Scattering
Effects of quark degrees of freedom in πd and pd scattering at large angles, 9:32069 (RA;HU)
Inelastic Scattering
Further evidence for the EELL effect, 9:32090 (R;CA)
Quark Model
Effects of quark degrees of freedom in πd and pd scattering at large angles, 9:32069 (RA;HU)
Scattering
Some applications of the evolution method in a coupling constant in nuclear physics, 9:32225 (R;SU;In Russian)

PIONIC ATOMS
Fine Structure
Relativistically corrected Schroedinger equation with Coulomb interaction, 9:31976 (J;US)
PION-KAON INTERACTIONS
Scattering Lengths
πK-scattering lengths, 9:32020 (R;SU;In Russian)
PION-PION INTERACTIONS
Scattering Lengths
$\pi\pi$-scattering lengths, 9:32019 (R;SU)
PIONS
See also PIONS MINUS
PIONS NEUTRAL
PIONS PLUS
Electroproduction
Pion pole term in electroproduction of off-mass-shell pions, 9:32032 (R;CA)
Multiple Production
Properties of pC and pTa interactions at Psub(p)=10 GeV/c accompanied by the emission of cumulative protons and π mesons, 9:32088 (R;XJ;In Russian)
Particle Production
Pion production on light nuclei by medium energy neutrons, 9:32070 (RA;HU)
Pion production from deuterium by the bombardment with polarized protons of 277 and 500 MeV, 9:32004 (R;CA)
Production of pions in relativistic nucleus-nucleus collisions, 9:32220 (RA;HU)
Subthreshold pion production in nucleus-nucleus collisions - a co-operative process, 9:32201 (RA;HU)
Subthreshold pion production in nucleus-nucleus collisions, 9:32202 (RA;HU)
Polarization-Asymmetry Ratio
Pion production from deuterium by the bombardment with polarized protons of 277 and 500 MeV, 9:32004 (R;CA)
Semileptonic Decay
New Measurement of the $\pi \rightarrow e\nu$ branching ratio, 9:32005 (R;CA)
PIONS MINUS
Multiplicity
Multiplicity distributions of π^- mesons produced in light nuclei interaction with tantalum nuclei for momentum interval 2-5 GeV/c per nucleon, 9:32142 (R;XJ;In Russian)
Particle Production
Correlations of identical particles in inelastic and central carbon-carbon collisions at P=4.2 GeV/c per nucleon, 9:32081 (RA;HU)
Multiplicity distributions of π^- mesons produced in light nuclei interaction with tantalum nuclei for momentum interval 2-5 GeV/c per nucleon, 9:32142 (R;XJ;In Russian)
Photoproduction
M1 suppression in pion photoproduction on ^{13}C, 9:32008 (R;CA)
PIONS NEUTRAL
Particle Production
Inclusive neutral pion production in interactions of positive particles with beryllium nuclei at 10.5 GeV/c, 9:31983 (R;SU;In Russian)
Photoproduction
Polarization parameters Σ, T, P for the $\gamma p \rightarrow p\pi^0$ reaction in the 280-450 MeV photon energy range, 9:31989 (RA;SU;In Russian)
Semileptonic Decay
Decay $\pi^0 \rightarrow \mu e$, 9:32003 (R;CA)
PIONS PLUS
Semileptonic Decay
Search for massive neutrinos in $\pi \rightarrow e\nu$ decay, 9:32006 (R;CA)
PIPELINES
Radiometric Surveys
Precise location of nonmetallic pipelines, 9:30417 (R;DE;In German)
PIPES
Boiling Detection
Acoustic imaging of vapor bubbles through optically non-transparent media, 9:30817 (J;US)
Cracks
Recent observations of cracks in large diameter BWR piping: analysis and remedial actions, 9:30913 (RA;US)
Erosion
H-Coal Pilot Plant. Volume VI. 4.0 - equipment performance: 4.12 - pressure safety valves, 4.13 - instrumentation, 4.14 - process piping systems, 4.15 - hydrogen compressors. Final report, 9:30109 (R;US)
Failures
Impact analyses after pipe rupture (PWR; BWR), 9:30955 (R;US)
Fluid-Structure Interactions
Impact analyses after pipe rupture (PWR; BWR), 9:30955 (R;US)
Impact Tests
Impact analyses after pipe rupture (PWR; BWR), 9:30955 (R;US)
In-Service Inspection
Qualification of ultrasonic testing for nuclear inservice inspection applications, 9:31424 (R;US)
Intergranular Corrosion
Recent observations of cracks in large diameter BWR piping: analysis and remedial actions, 9:30913 (RA;US)
Plugging
H-Coal Pilot Plant. Volume VI. 4.0 - equipment performance: 4.12 - pressure safety valves, 4.13 - instrumentation, 4.14 - process piping systems, 4.15 - hydrogen compressors. Final report, 9:30109 (R;US)
Seismic Effects
Damping test results for straight sections of 3-inch and 8-inch unpressurized pipes (PWR; BWR), 9:30941 (R;US)
Stress Analysis
Damping test results for straight sections of 3-inch and 8-inch unpressurized pipes (PWR; BWR), 9:30941 (R;US)
Stress Corrosion
Recent observations of cracks in large diameter BWR piping: analysis and remedial actions, 9:30913 (RA;US)
Supports
Alternate analysis criteria for the seismic qualification of the supplementary safety system in Reactor Building 105-L, Savannah River Plant, 9:30850 (R;US)
Ultrasonic Testing
Qualification of ultrasonic testing for nuclear inservice inspection applications, 9:31424 (R;US)
Wear
Wear testing in power stations, 9:30426 (RA;SU)
PISUM
Autoradiography
Evaluation of autoradiograms using a microcomputer, 9:30430 (RA;SU)
PITCH (REACTOR PARAMETERS)
See REACTOR LATTICE PARAMETERS
PITCHES
Health Hazards
Health hazard evaluation report No. HETA 80-206-1164, Mid-South Terminals, Memphis, Tennessee, 9:30238 (R;US)
PITTSBURG-MIDWAY SOLVENT REFINED COAL PRO
See SRC PROCESS
PIXE ANALYSIS
Prior to October 1980, this concept was indexed to X-RAY EMISSION ANALYSIS.
Sample Preparation
Sample preparation techniques in trace element analysis by X-ray emission spectroscopy, 9:31623 (R;AT)
PLANTS (INDUSTRIAL)
See INDUSTRIAL PLANTS
PLANTS (POWER)
See POWER PLANTS
PLASMA
See also EQUILIBRIUM PLASMA
INHOMOGENEOUS PLASMA
LASER-PRODUCED PLASMA
OPTICALLY THIN PLASMA
Boltzmann-Vlasov Equation
Quasi-invariance (rescaling) in nonlinear physics, 9:32295 (R;US)
Bremsstrahlung
Measurement of continuous x-radiation and determination of the energy distribution function of high-energy electrons from an ECR plasma, 9:32339 (TG;US)

Distribution Functions
Measurement of continuous x-radiation and determination of the energy distribution function of high-energy electrons from an ECR plasma, 9:32339 (TG;US)
Heat Transfer
Nonlocal heat transport by non-Maxwellian electrons, 9:32303 (R;US)
Joule Heating
Initial confinement studies of ohmically heated plasmas in the tokamak fusion test reactor, 9:32331 (J;US)
Polarization
Physical processes in spin polarized plasmas, 9:32363 (R;US)
Rotation
Rotation of a tenuous plasma with high toroidal velocity in a tokamak, 9:32337 (TG;US)
X-Ray Spectra
Measurement of continuous x-radiation and determination of the energy distribution function of high-energy electrons from an ECR plasma, 9:32339 (TG;US)

PLASMA DIAGNOSTICS
Local area network for the plasma diagnostics system of MFTF-B, 9:32326 (R;US)
Computerized Control Systems
Evaluating and tuning system response in the MFTF-B control and diagnostics computers, 9:32324 (R;US)
Report on the experience with the Supervisory Control and Diagnostics System (SCDS) of MFTF-B, 9:32329 (R;US)
Electrostatic Probes
Design of the electromagnetic fluctuations diagnostic for MFTF-B, 9:32328 (R;US)
Interferometers
Design and prototype results of a far-infrared interferometer for MFTF-B, 9:32330 (R;US)
Laser Radiation
Possibility of using pulsed CO_2 lasers for radiation scattering diagnostics in tokamak plasmas, 9:32333 (TG;GB)
Magnetic Probes
Design of the plasma current sensor diagnostic for MFTF-B, 9:32325 (R;US)
Probes
Energy-resolving carbon resistance probes for plasma edge characterization, 9:32321 (R;US)
Surface probe measurements in ISX-B and EBT-S, 9:32316 (RA;AT)
Stark Effect
Studies of CO_2 laser interactions with plasmas. Final technical report, 1 January 1981-30 March 1983, 9:32348 (R;US)

PLASMA DRIFT
Magnetohydrodynamics
Generalized gyrokinetics, 9:32319 (R;US)

PLASMA MACROINSTABILITIES
See also PARAMETRIC INSTABILITIES
Analytical Solution
MHD stability of corrugated toroidal systems, 9:32336 (TG;US)

PLASMA OSCILLATIONS
See PLASMA WAVES

PLASMA (QUARK)
See QUARK MATTER

PLASMA WAVES
Coupling
Non-geometrical optics investigation of mode conversion in weakly relativistic inhomogeneous plasmas. Annual progress report, September 14, 1983-May 14, 1984, 9:32305 (R;US)

PLASTIC PROPERTIES
See PLASTICITY

PLASTICITY
Stress Analysis
Effect of finite rotation on a problem in plastic deformation, 9:31394 (R;US)

PLASTICS
Physical Properties
Characterization of process streams and the effects of plastic wastes on anaerobic digestion, 9:30476 (BA;US)
Physical Radiation Effects
Accelerated-aging tests for predicting radiation degradation of organic materials, 9:30961 (J;US)
Positron Computed Tomography
Design considerations for positron transmission tomograph used for non-medical applications, 9:31427 (J;US)

PLATINUM
Sorptive Properties
Orientation of adsorbed formate ions on Pt(110), 9:31174 (RA;AT)

PLATINUM 197
Energy Levels
Structure of alternative supersymmetry schemes in nuclei, 9:32238 (J;NL)

PLESIOTHERAPY
See RADIOTHERAPY

PLOWS (COAL)
See COAL PLOWS

PLUMES
Computer Codes
User's manual: cooling-tower-plume prediction code, 9:31677 (R;US)

PLUTONIUM
Alpha Spectroscopy
Investigations in the field of development of methods for determination of composition of spent fuels from WWER-type reactors, 9:31283 (RA;SU;In Russian)
Calorimetry
Pu-content verification by calorimetry, 9:30404 (R;US)
Simultaneous calorimetric assay system: a transportable device to measure plutonium, 9:31292 (R;US)
Conversion Ratio
Some neutron physical consequences of maximizing the conversion ratio of pressurized water reactors operated in the uranium-plutonium cycle, 9:30735 (J;US)
Electrodeposition
Improvement of the analytic results of thermal ionization mass spectrometry through electrolytic sample deposition: application of plutonium, 9:31306 (TJ;US)
Electronic Structure
Ceriumlike behaviour of plutonium, 9:31340 (RA;IL)
Recent applications of the relativistically parameterized extended Huckel method (REX) on actinide compounds, 9:31339 (RA;IL)
Energy-Level Transitions
Ceriumlike behaviour of plutonium, 9:31340 (RA;IL)
Gamma Spectra
Portable microcomputer for the analysis of plutonium gamma-ray spectra. Volume I. Data analysis methodology and hardware description, 9:31295 (R;US)
Portable microcomputer for the analysis of plutonium gamma-ray spectra. Volume II. Software description and listings, 9:31296 (R;US)
Gamma Spectroscopy
Determination of plutonium isotopic ratios by gamma-ray spectrometry, 9:31309 (TJ;US)
Isotope Ratio
Pu-content verification by calorimetry, 9:30404 (R;US)
Mass Spectroscopy
Improvement of the analytic results of thermal ionization mass spectrometry through electrolytic sample deposition: application of plutonium, 9:31306 (TJ;US)
Plutonium determination by isotope dilution, 9:30410 (TJ;US)
Nuclear Materials Management
Automatic chemical determination facility for plutonium and uranium, 9:30292 (TJ;US)
Automation of plutonium spectrophotometry, 9:30413 (TJ;US)
Determination of plutonium content by differential attenuation of two gamma rays, 9:30412 (TJ;US)
On-line plutonium measurement by alpha counting using a glass sensor, 9:30411 (TJ;US)
Plutonium determination by spectrophotometry of plutonium. VI. Control of the nuclear fuel reprocessing plant, 9:30409 (TJ;US)
Plutonium determination by isotope dilution, 9:30410 (TJ;US)
Nuclear Reaction Analysis
On-line measurement of small quantities of plutonium in the presence of americium, 9:31312 (TJ;US)

Oxidation
Determination of plutonium by spectrophotometry of plutonium (VI) characteristics of the method and important parameters, 9:30414 (TJ;US)
Plutonium determination by spectrophotometry of plutonium. VI. Control of the nuclear fuel reprocessing plant, 9:30409 (TJ;US)
Particle Resuspension
Transuranic resuspension, 9:31676 (R;US)
Potentiometry
Automatic chemical determination facility for plutonium and uranium, 9:30292 (TJ;US)
Pyrochemical Reprocessing
Evaluation of nonaqueous processes for nuclear materials, 9:30298 (R;US)
Pyrometallurgy
Evaluation of nonaqueous processes for nuclear materials, 9:30298 (R;US)
Radioecological Concentration
Radiological and Environmental Research Division: ecology. Annual report, January-December 1982, 9:31646 (R;US)
Radiometric Analysis
Automated in-line measurement of plutonium solutions in a plutonium purification process, 9:30407 (J;US)
On-line plutonium measurement by alpha counting using a glass sensor, 9:30411 (TJ;US)
Removal
Electrochemical decontamination of Pu contaminated stainless steel, 9:31338 (R;GB)
Spectrophotometry
Automation of plutonium spectrophotometry, 9:30413 (TJ;US)
Determination of plutonium by spectrophotometry of plutonium (VI) characteristics of the method and important parameters, 9:30414 (TJ;US)
Plutonium determination by spectrophotometry of plutonium. VI. Control of the nuclear fuel reprocessing plant, 9:30409 (TJ;US)
Tissue Distribution
Model for the age-dependent skeletal retention of plutonium, 9:31752 (R;US)
X-Ray Fluorescence Analysis
Passive-X-ray fluorescence determination of the plutonium and uranium ratio in burnt-up fuel. Final report for the period 1 December 1981 - 30 November 1982, 9:30290 (R;AT)
Plutonium content of fast-neutron-reactors fuels by x-ray fluorescence, 9:31307 (TJ;US)
Possibilities of plutonium analysis by means of x-ray flourescence with iridium 912 radioactive sources, 9:31310 (TJ;US)

PLUTONIUM 238
Fuel Cycle
The role of plutonium-238 in nuclear fuel cycles, 9:30711 (J;US)
Isotope Ratio
Determination of plutonium isotopic ratios by gamma-ray spectrometry, 9:31309 (TJ;US)
Precursor
The role of plutonium-238 in nuclear fuel cycles, 9:30711 (J;US)
Production
The role of plutonium-238 in nuclear fuel cycles, 9:30711 (J;US)
Radioecological Concentration
Behavior of plutonium and americium in two groundwater systems, 9:31718 (RA;US)
Environmental radiation data report 34, April-June 1983, 9:31691 (R;US)
Thermal Spikes
The role of plutonium-238 in nuclear fuel cycles, 9:30711 (J;US)

PLUTONIUM 239
Global Fallout
Inventories of ^{239,240}Pu, ^{241}Am, ^{137}Cs, and ^{60}Co in Columbia River sediments from Hanford to the Columbia River estuary, 9:31721 (J;US)
Isotope Ratio
Determination of plutonium and uranium isotopic ratios in air for environmental monitoring, 9:31675 (RA;IL)
Determination of plutonium isotopic ratios by gamma-ray spectrometry, 9:31309 (TJ;US)
Radioecological Concentration
Environmental radiation data report 34, April-June 1983, 9:31691 (R;US)
Inventories of ^{239,240}Pu, ^{241}Am, ^{137}Cs, and ^{60}Co in Columbia River sediments from Hanford to the Columbia River estuary, 9:31721 (J;US)
Plutonium concentrations in the Great Lakes: an update, 9:31717 (RA;US)

PLUTONIUM 239 TARGET
Neutron Reactions
Neutron multiplicities of ^{252}Cf and the fissile nuclei. Final report, 9:32146 (R;US)

PLUTONIUM 240
Global Fallout
Inventories of ^{239,240}Pu, ^{241}Am, ^{137}Cs, and ^{60}Co in Columbia River sediments from Hanford to the Columbia River estuary, 9:31721 (J;US)
Isotope Ratio
Determination of plutonium and uranium isotopic ratios in air for environmental monitoring, 9:31675 (RA;IL)
Radioecological Concentration
Inventories of ^{239,240}Pu, ^{241}Am, ^{137}Cs, and ^{60}Co in Columbia River sediments from Hanford to the Columbia River estuary, 9:31721 (J;US)
Plutonium concentrations in the Great Lakes: an update, 9:31717 (RA;US)

PLUTONIUM 241
Isotope Ratio
Determination of plutonium isotopic ratios by gamma-ray spectrometry, 9:31309 (TJ;US)

PLUTONIUM 241 TARGET
Neutron Reactions
Neutron multiplicities of ^{252}Cf and the fissile nuclei. Final report, 9:32146 (R;US)

PLUTONIUM ALLOYS
Crystal Growth
Crystal growth of plutonium monopnictides, 9:31356 (RA;IL)
Magnetic Properties
Magnetic properties of PuAs, PuSb and PuBi single crystals, 9:31189 (RA;IL)
Neutron diffraction study of the magnetic ordering in plutonium monopnictides PuAs PuSb, 9:31227 (RA;IL)

PLUTONIUM ARSENIDES
Crystal Growth
Crystal growth of plutonium monopnictides, 9:31356 (RA;IL)
Magnetic Properties
Magnetic properties of PuAs, PuSb and PuBi single crystals, 9:31189 (RA;IL)
Neutron diffraction study of the magnetic ordering in plutonium monopnictides PuAs PuSb, 9:31227 (RA;IL)

PLUTONIUM COMPOUNDS
See also PLUTONIUM ARSENIDES
PLUTONIUM FLUORIDES
PLUTONIUM NITRATES
PLUTONIUM OXIDES
Crystal Structure
^{239}Pu Dsub(2.25) neutron powder diffraction study, 9:31350 (RA;IL)
Neutron Diffraction
^{239}Pu Dsub(2.25) neutron powder diffraction study, 9:31350 (RA;IL)
Solubility
Plutonium solubility in natural waters, 9:31716 (RA;US)

PLUTONIUM DIOXIDE
Calcination
Moisture determination in plutonium and uranium-plutonium oxides, 9:31308 (TJ;US)
Chemical Analysis
Automatic chemical determination facility for plutonium and uranium, 9:30292 (TJ;US)
Moisture determination in plutonium and uranium-plutonium oxides, 9:31308 (TJ;US)

Moisture uptake by plutonium oxide powder, 9:31311 (TJ;US)
Plutonium content of fast-neutron-reactors fuels by x-ray fluorescence, 9:31307 (TJ;US)
Degassing
Hot vacuum outgassing to ensure low hydrogen content in MOX fuel pellets for thermal reactors, 9:30289 (R;IN)
Moisture
Moisture determination in plutonium and uranium-plutonium oxides, 9:31308 (TJ;US)
Moisture uptake by plutonium oxide powder, 9:31311 (TJ;US)
PLUTONIUM FLUORIDES
Precipitation
Two-stage precipitation of plutonium trifluoride, 9:30294 (R;US)
PLUTONIUM ISOTOPES
See also PLUTONIUM 238
PLUTONIUM 239
PLUTONIUM 240
PLUTONIUM 241
Accounting
Determination of plutonium content by differential attenuation of two gamma rays, 9:30412 (TJ;US)
Isotope Ratio
Plutonium isotopic analysis with surface ionization mass spectrometry, 9:30408 (TJ;US)
Mass Spectroscopy
Plutonium isotopic analysis with surface ionization mass spectrometry, 9:30408 (TJ;US)
Radiation Absorption Analysis
Determination of plutonium content by differential attenuation of two gamma rays, 9:30412 (TJ;US)
PLUTONIUM NITRATES
Diffusion
Transport processes of actinides in aqueous and nonaqueous solutions, 9:31353 (RA;IL)
Safeguards
Compact K-edge densitometer, 9:30402 (R;US)
PLUTONIUM OXIDES
See also PLUTONIUM DIOXIDE
Fluorination
Fluorination of irradiated uranium-plutonium oxide fuel in flame reactor, 9:30297 (R;SU;In Russian)
PLUTONIUM RECYCLE TEST REACTOR
See PRTR REACTOR
PMMA
Chemical Reactions
Stability of reflectors with polymeric coatings, 9:30568 (J;US)
PNA
See POLYCYCLIC AROMATIC HYDROCARBONS
POINCARE GROUPS
Gauge Invariance
Gravitation as Gauge theory of Poincare Group, 9:32045 (R;BR;In Portuguese)
POISEUILLE FLOW
See LAMINAR FLOW
POISONS (CHEMICAL)
See HAZARDOUS MATERIALS
POLARIMETERS
Calibration
Beam polarization at the ZGS, 9:31603 (J;NL)
POLARIZED BEAMS
Polarimeters
Beam polarization at the ZGS, 9:31603 (J;NL)
POLICY
See ENERGY POLICY
ENVIRONMENTAL POLICY
POLLUCITE
$CsAlSi_2O_6$.
Chemical Reactions
Interactions of backfill materials with cesium in a bittern brine under repository conditions, 9:30371 (J;US)
Hydrothermal Alteration
Interactions of backfill materials with cesium in a bittern brine under repository conditions, 9:30371 (J;US)
POLLUTANTS
Not for radioactive contaminants for which use RADIOACTIVE WASTES or other related terminology.
Risk Assessment
Methods for pre-assessing the chemical-pollutant load of Bavaria's population (period: 10-20 years), 9:31685 (R;DE;In German)
POLLUTION CONTROL EQUIPMENT
See also BAGHOUSES
ELECTROSTATIC PRECIPITATORS
SCRUBBERS
Adsorbents
22 MW coal-fired demonstration of dry SO_2 scrubbing with sodium sorbent compounds, 9:30662 (RA;US)
Economics of dry Flue Gas Desulfurization (FGD) by sorbent injection, 9:30663 (RA;US)
Baghouses
Baghouse design and operating considerations at North Valmy Unit One, 9:30681 (RA;US)
Electrostatic Precipitators
Economics of fabric filters and electrostatic precipitators, 1983, 9:30655 (RA;US)
Fabric Filters
1983 update, operating history and current status of fabric filters in the utility industry, 9:30654 (RA;US)
22 MW coal-fired demonstration of dry SO_2 scrubbing with sodium sorbent compounds, 9:30662 (RA;US)
Analysis and interpretation of fabric filter performance, 9:30672 (RA;US)
Economics of fabric filters and electrostatic precipitators, 1983, 9:30655 (RA;US)
Economics of dry Flue Gas Desulfurization (FGD) by sorbent injection, 9:30663 (RA;US)
EPRI spray dryer/baghouse pilot plant status and results, 9:30664 (RA;US)
Fabric and finish selection, manufacturing techniques and other factors affecting bag life in the coal fired boiler application, 9:30657 (RA;US)
Fabric evaluation program at Coyote Unit No. 1 operating results update, 9:30659 (RA;US)
Fabric filtration in Japan, 9:30668 (RA;US)
Fabric filter research at Southwestern Public Service Company, 9:30682 (RA;US)
Filter bag construction design considerations for optimized performance, 9:30658 (RA;US)
Filter fabric concepts in Europe for coal-fired boiler applications, 9:30661 (RA;US)
Fluid dynamic guidelines for fabric filter design, 9:30667 (RA;US)
Fluid dynamic considerations in the design of a fabric filter system, 9:30680 (RA;US)
High ratio fabric filter operating experience on utility coal fired boilers, 9:30669 (RA;US)
Influence of cleaning conditions on outlet dust concentration of a pulse jet fabric filter, 9:30666 (RA;US)
Japanese technical development of bag houses for coal fired utility boilers, 9:30675 (RA;US)
Manufacture of glass-fiber yarns, 9:30656 (RA;US)
Operating experience in Australia with fabric filters on power boilers, 9:30677 (RA;US)
Operation and maintenance experience on the EPRI 10 MW high sulfur coal pilot baghouse at Plant Scholz, 9:30673 (RA;US)
Performance evaluation of reverse-gas baghouses on coal-fired utility boilers, 9:30670 (RA;US)
Performance of a 10 MW baghouse collecting fly ash from a high-sulfur coal-fired boiler, 9:30674 (RA;US)
Performance evaluation of several full-scale utility baghouses, 9:30676 (RA;US)
Present status of bag filters at Pennsylvania Power & Light Company, 9:30678 (RA;US)
Proceedings: second conference on fabric filter technology for coal-fired power plants, 9:30653 (R;US)
Processing and end-use performance of finished glass fabrics for filtration, 9:30660 (RA;US)
Review of EPA fabric filtration research and development, 9:30665 (RA;US)
Study of sonic cleaning for enhanced baghouse performance, 9:30671 (RA;US)

Use of sonic air horns as an assist to reverse air cleaning of a fabric filter dust collector, 9:30679 (RA;US)
Meetings
Proceedings: second conference on fabric filter technology for coal-fired power plants, 9:30653 (R;US)
Spray Drying
EPRI spray dryer/baghouse pilot plant status and results, 9:30664 (RA;US)

POLOIDAL DIVERTOR EXPERIMENT
See PDX DEVICES

POLONIUM 210
Radioecological Concentration
Atmospheric fluxes and geochemistries of stable Pb, Pb-210, and Po-210 in Crystal Lake, Wisconsin: Wisconsin power plant impact study, 9:31720 (R;US)

POLYACETYLENES
Chemical Shift
^{13}C solid high-resolution NMR in polyacetylene and its derivatives, 9:31247 (TG;US)
Isomerization
^{13}C solid high-resolution NMR in polyacetylene and its derivatives, 9:31247 (TG;US)
Nuclear Magnetic Resonance
Mechanism of Ziegler-Natta polymerization of acetylene: a nutation NRMR study. Technical report, 22 Jun 82-9 Dec 83, 9:31242 (R;US)

POLYACRYLONITRILE
See ORGANIC POLYMERS

POLYCYCLIC AROMATIC HYDROCARBONS
Fluorescence Spectroscopy
Versatility of laser induced fluorescence line narrowing in chemical analysis, 9:31288 (R;US)
Measuring Instruments
Industrial hygiene monitoring of gaseous, liquid and particulate matter releases at the Catlettsburg, Kentucky H-coal facility: results and evaluation, 9:30150 (R;US)
Monitoring
Industrial hygiene monitoring of gaseous, liquid and particulate matter releases at the Catlettsburg, Kentucky H-coal facility: results and evaluation, 9:30150 (R;US)
Quantity Ratio
Similarity of some organic compounds in spark-ignition and diesel engine particulate extracts, 9:31666 (J;US)

POLYCYCLIC NITRO COMPOUNDS
Metabolism
Intracellular thiols: involvement in drug metabolism and radiation response, 9:31803 (RA;US)

POLYESTERS
Charged-Particle Transport
Characterization of the radiation field and control of the optimal electron beam accelerator operation for industrial processes, 9:32251 (RA;SU)

POLYETHYLENE TERPHTHALATE
See POLYESTERS

POLYETHYLENES
Charged-Particle Transport
Characterization of the radiation field and control of the optimal electron beam accelerator operation for industrial processes, 9:32251 (RA;SU)

POLY(ISOBUTYLENE OXIDE)
See ORGANIC POLYMERS

POLYMER FLOODING
See WATERFLOODING

POLYMERS
See also ORGANIC POLYMERS
Chemical Radiation Effects
Ion irradiation induced modification of polymethyl methacrylate, 9:31243 (RA;AT)
Crystallization
Properties of polymers: some uses in electronics. Part One, 9:31245 (TG;US)
Dielectric Properties
Properties of polymers: some uses in electronics. Part Two, 9:31246 (TG;US)
Phase Transformations
Properties of polymers: some uses in electronics. Part One, 9:31245 (TG;US)
Surface Coating
Stability of reflectors with polymeric coatings, 9:30568 (J;US)
Thermomechanical Treatments
Properties of polymers: some uses in electronics. Part One, 9:31245 (TG;US)
Uses
Properties of polymers: some uses in electronics. Part Two, 9:31246 (TG;US)

POLYMETHYLMETHACRYLATES

POPLARS
Biomass Plantations
Economic and energy analysis of poplar intensive cultures in the Lake States, 9:31043 (R;US)

POROUS MATERIALS
Stress Analysis
New approach to the effective stress principle, 9:31425 (R;US)

POSITRON CAMERAS
Design
Design considerations for positron transmission tomograph used for non-medical applications, 9:31427 (J;US)
Performance
Design considerations for positron transmission tomograph used for non-medical applications, 9:31427 (J;US)

POSITRON COMPUTED TOMOGRAPHY
Engineering developments on the UBC-TRIUMF modified PETT VI positron emission tomograph, 9:31563 (R;CA)
Uses
Design considerations for positron transmission tomograph used for non-medical applications, 9:31427 (J;US)

POSITRON-ELECTRON-PROTON STORAGE RING
See PEP STORAGE RINGS

POSITRONS
Annihilation
Positron prevacancy effects in pure annealed metals, 9:31219 (BA;NL)
Lasers
Electron (and positron) acceleration with lasers, 9:31485 (BA;US)
Photoproduction
Energy spectra of positrons and electrons produced in lead target by bremsstrahlung beam, 9:32141 (RA;SU;In Russian)

POSTULATED PARTICLES
See also CHARM PARTICLES
GRAVITONS
MAGNETIC MONOPOLES
QUARKS
Particle Decay
Observation of a structure in PHIπ0 mass spectrum, 9:31986 (R;SU)
Particle Production
New particle searches at PEP, 9:31999 (R;US)
Observation of a structure in PHIπ^0 mass spectrum, 9:31986 (R;SU)
Search for neutral, penetrating, metastable particles produced in the SLAC beam dump, 9:31982 (R;US)

POTASSIUM CHLORIDES
Opacity
Effect of radiation defects on the transparency of alkali-halide monocrystals in the average IR-range, 9:31263 (RA;SU;In Russian)

Physical Radiation Effects
Effect of radiation defects on the transparency of alkali-halide monocrystals in the average IR-range, 9:31263 (RA;SU;In Russian)
Study of the electronic structure of radiation defects in crystals KCl:LiCl, 9:31257 (RA;SU;In Russian)

POTASSIUM IODIDES
F Centers
H-centers conversion into I-centers in alkali iodides, 9:31260 (RA;SU;In Russian)
H Centers
H-centers conversion into I-centers in alkali iodides, 9:31260 (RA;SU;In Russian)
Physical Radiation Effects
H-centers conversion into I-centers in alkali iodides, 9:31260 (RA;SU;In Russian)

POTASSIUM IONS
Ion-Molecule Collisions
Mobility of Li^+ and K^+ ions in helium and argon at 294 and 80 K and derived interaction potentials, 9:31938 (RA;AT)

POTENTIAL SCATTERING
Phase Shift
High-energy behaviour of scattering phase shifts for Coulomb-like potentials, 9:32059 (R;AT)

POWER CONDITIONING CIRCUITS
Performance Testing
Power conditioning accessories. Construction of a delayed drop-out relay and test of constant voltage transformers, 9:31388 (R;AT)

POWER DEMAND
Assessment of materials-processing lasers. Final report, 9:31406 (R;US)
Supply and Demand
Electric power supply and demand for the contiguous United States 1984-1993. Staff report, 9:31031 (R;US)

POWER DISTRIBUTION SYSTEMS
Dispersed Storage and Generation
Operational and design considerations for electric distribution systems with dispersed storage and generation (DSG), 9:30607 (R;US)

POWER GENERATION
See also COGENERATION
Cost
Optimization of fuel cycle strategies with constraints on uranium availability, 9:30792 (J;US)
Optimization
The effect of plant reliability improvement in the cost of generating electricity, 9:30791 (J;US)

POWER PLANTS

Engineered Safety Systems
Aging and seismic performance for safety-related equipment in a mild environment, 9:30830 (J;US)
Pipes
Acoustic imaging of vapor bubbles through optically non-transparent media, 9:30817 (J;US)
Primary Coolant Circuits
Development of a fluid finite element, 9:30868 (R;US)
Reactor Protection Systems
Aging and seismic performance for safety-related equipment in a mild environment, 9:30830 (J;US)

POWER SUPPLIES
See also PHOTOVOLTAIC POWER SUPPLIES
Computerized Simulation
Computer model of the MFTF-B neutral beam Accel dc power supply, 9:32373 (R;US)
Electric Arcs
Sparking protection for MFTF-B neutral beam power supplies, 9:32376 (R;US)
Performance
Startup experience with the MFTF-B ECRH 100 kV dc power supply, 9:32374 (R;US)
Safety
Sparking protection for MFTF-B neutral beam power supplies, 9:32376 (R;US)

POWER TRANSMISSION
See also MICROWAVE POWER TRANSMISSION
Accidents
Annual report of the Electricity Inspectorate for 1982, 9:31429 (R;NO;In Norwegian)

POWER TRANSMISSION LINES
Electric Cables
Workshop proceedings: electrical testing of extruded-dielectric power transmission cables, 9:30686 (R;US)
Environmental Impacts
Susitna hydroelectric project, FERC No. 7114 - Alaska. Volume 2. Appendices A through D. Draft environmental impact statement, 9:30496 (R;US)

POWERED SUPPORTS
Hydraulic Fluids
Improvement of hydraulic liquids for the face support, 9:30204 (R;DE;In German)

PRASEODYMIUM 131
Beta Decay
Study on the ^{139}Ce, ^{131}Ce and ^{131}Pr decay, 9:32118 (RA;SU;In Russian)

PREAMPLIFIERS
Cryogenic Fluids
Cryogenically cooled broad-band GaAs field-effect transistor preamplifier, 9:31589 (J;US)
Design
Cryogenically cooled broad-band GaAs field-effect transistor preamplifier, 9:31589 (J;US)
Feedback
A low noise preamplifier using a tetrode field effect transistor in a novel feedback arrangement, 9:31446 (J;US)
Field Effect Transistors
A low noise preamplifier using a tetrode field effect transistor in a novel feedback arrangement, 9:31446 (J;US)
Cryogenically cooled broad-band GaAs field-effect transistor preamplifier, 9:31589 (J;US)
Transistors
High precision measurement of transistor noise with automatic calibration under computer control, 9:31445 (J;US)

PRECIPITATION SCAVENGING
Overview of the oxidation and scavenging characteristics of April rains (OSCAR) experiment, 9:31661 (R;US)

PRECURSOR
Production
The role of plutonium-238 in nuclear fuel cycles, 9:30711 (J;US)
PRECURSORS (DELAYED PROTON)
See DELAYED PROTON PRECURSORS
PRESSURE GAGES
Time Resolution
A note on estimation of pressure sensor time constant from the normal operating data, 9:30737 (J;US)
PRESSURE TUBES
Cold Working
CANDU-PHW pressure tubes: Their manufacture, inspection, and properties, 9:30759 (J;US)
Crevice Corrosion
Absorption of dissolved hydrogen from lithiated water during accelerated corrosion of zirconium-2.5 wt% niobium alloy, 9:31201 (R;CA)
Extrusion
CANDU-PHW pressure tubes: Their manufacture, inspection, and properties, 9:30759 (J;US)
Hydridation
Review of current knowledge on the effects of hydrogen on the pressure tubes of Ontario Hydro operating reactors, 9:30758 (R;CA)
Ultrasonic Testing
CANDU-PHW pressure tubes: Their manufacture, inspection, and properties, 9:30759 (J;US)
PRESSURE VESSELS
Crack Propagation
Stress analysis of a rotating cylinder experiment to determine crack growth in thick section steel, 9:30810 (R;GB)
Fracture Properties
Stress analysis of a rotating cylinder experiment to determine crack growth in thick section steel, 9:30810 (R;GB)
Nondestructive Testing
Impact of nondestructive examination unreliability on pressure vessel fracture predictions, 9:30812 (R;US)
Physical Radiation Effects
PSF blind test SSC, SPVC, and SVBC physics-dosimetry-metallurgy data packages (PWR, BWR), 9:30704 (R;US)
Repair
Vessel V-7 and V-8 repair and characterization of insert material. Final report, 9:30813 (R;US)
Thermal Shock
EPRI research and application efforts on reactor vessel pressurized thermal shock, 9:30910 (RA;US)
PRESSURIZED WATER COOLED MODERATED REACTO

PRICING REGULATIONS
Deregulation
Principles of the administration's natural gas deregulation proposal, 9:30261 (J;US)
PRIMARY COOLANT CIRCUITS
Activity Levels
Uses of data: crud transport processes, 9:30726 (RA;US)
Wear measurements of nuclear power plant components. Final report, 9:30698 (R;US)
Coolant Cleanup Systems
Reactor coolant high-temperature filtration. Volume 4. Engineering details of the Byron nuclear station high-temperature filtration facility. Final report, 9:30720 (R;US)
Corrosion Products
hot reactor coolant sampling: Westinghouse approach, 9:30727 (RA;US)
Uses of data: crud transport processes, 9:30726 (RA;US)
Deposits
Particulate transport theory: relationship to sample system design, 9:30694 (RA;US)
Filters
Effect of filter-particle interactions on the performance of filters, 9:30721 (RA;US)
Use of ion exchange filters for corrosion product sampling, 9:30695 (RA;US)
Flow Blockage
Sodium flow blockage in liquid-metal fast breeder reactors: sweepout of a planar blockage, 9:30966 (J;US)
Flow Rate
Estimate of cross flow in high temperature gas-cooled reactor fuel blocks, 9:30749 (J;US)
Fluid Mechanics
Estimate of cross flow in high temperature gas-cooled reactor fuel blocks, 9:30749 (J;US)
Sodium flow blockage in liquid-metal fast breeder reactors: sweepout of a planar blockage, 9:30966 (J;US)
Fluid-Structure Interactions
Development of a fluid finite element, 9:30868 (R;US)
Estimate of cross flow in high temperature gas-cooled reactor fuel blocks, 9:30749 (J;US)
Gas Flow
Estimate of cross flow in high temperature gas-cooled reactor fuel blocks, 9:30749 (J;US)
Heat Transfer
KINE--A one-dimensional dynamics program for pressurized water reactors with partial boiling in the core, 9:30738 (J;US)
Hydraulics
KINE--A one-dimensional dynamics program for pressurized water reactors with partial boiling in the core, 9:30738 (J;US)
Hydrodynamics
Development of a fluid finite element, 9:30868 (R;US)
Magnetic Filters
Reactor coolant high-temperature filtration. Volume 1. Summary report. Final report, 9:30717 (R;US)
Pressure Gages
A note on estimation of pressure sensor time constant from the normal operating data, 9:30737 (J;US)
Pressure Measurement
A note on estimation of pressure sensor time constant from the normal operating data, 9:30737 (J;US)
Samplers
Multi-capillary isokinetic sampling head (PWR), 9:30728 (RA;US)
Reactor crud sampling, 9:30696 (RA;US)
Requirement for isokinetic capillary sampling systems for PWR primary coolant circuits, 9:30729 (RA;US)
Sampling
hot reactor coolant sampling: Westinghouse approach, 9:30727 (RA;US)
Sampling of metallic impurities in BWR's, 9:30697 (RA;US)
Uses of data: crud transport processes, 9:30726 (RA;US)
Scaling
A mechanism of radioactive corrosion product buildup on the stainless steel surface used in the primary cooling systems of boiling water reactors, 9:30705 (J;US)
Stress Corrosion
Effects of variations in BWR water chemistry on the electrochemical potential of stainless steel and other metals, 9:30701 (R;US)
Water Chemistry
Effect of filter-particle interactions on the performance of filters, 9:30721 (RA;US)
Effects of variations in BWR water chemistry on the electrochemical potential of stainless steel and other metals, 9:30701 (R;US)
Particulate transport theory: relationship to sample system design, 9:30694 (RA;US)
Reactor crud sampling, 9:30696 (RA;US)
Sampling of metallic impurities in BWR's, 9:30697 (RA;US)
Use of ion exchange filters for corrosion product sampling, 9:30695 (RA;US)
Uses of data: crud transport processes, 9:30726 (RA;US)
PROBES

Structure and properties of zeolite-supported $Ru_3(CO)_{12}$ catalysts, 9:30461 (RA;US)
Deuteration
Electron transport in liquids: effect of unbalancing the methane molecule by deuteration, 9:31321 (RA;AT)
Hydrogenation
Characterization of Ru zeolite catalysts by a hydrogenolysis test reaction network, 9:31320 (RA;US)
Isotope Effects
Electron transport in liquids: effect of unbalancing the methane molecule by deuteration, 9:31321 (RA;AT)
PROPENE
See PROPYLENE
PROPORTIONAL COUNTERS
See also HE-3 COUNTERS
MULTIWIRE PROPORTIONAL CHAMBERS
Electronic Circuits
Electronic circuits for activity measuring installations, 9:31544 (RA;SU;In Russian)
PROPYLENE
Chemical Reaction Kinetics
Kinetic measurements on the system olefin/hydrogen/precious metal catalyst in the pressure and temperature range of technical petroleum conversion processes, 9:30235 (R;DE;In German)
Hydrocracking
Kinetic measurements on the system olefin/hydrogen/precious metal catalyst in the pressure and temperature range of technical petroleum conversion processes, 9:30235 (R;DE;In German)
PROTECTION (RADIATION)
See RADIATION PROTECTION
PROTECTIVE CLOTHING
Comparative Evaluations
Heat resistant protective clothing, 9:31822 (R;US;FR)
PROTON BEAMS
Energy
Variance and regression analyses of Moyer model parameter data and their variation with primary proton energy, 9:31792 (J;GB)
Microdosimetry
Calculations of microdosimetric quantities, 9:31333 (RA;US)
PROTON PRECESSION MAGNETOMETERS
Magnetic Fields
Remote controlled magnetometer to measure homogeneous magnetic field, 9:31627 (R;XJ;In Russian)
PROTON REACTIONS
Capture
Large Pauli-blocking and virtual channel effects in proton radiative capture, 9:32095 (J;US)
Compound-Nucleus Reactions
Calculations of proton scattering cross sections using statistical theory, 9:32120 (RA;SU;In Russian)
Elastic Scattering
Effects of quark degrees of freedom in πd and pd scattering at large angles, 9:32069 (RA;HU)
Elastic scattering of polarized protons from ^{3}He at intermediate energies, 9:32076 (R;CA)

Experimental study on the threshold anomaly in proton elastic scattering on nuclei with A approximately 30, 9:32098 (RA;SU;In Russian)
Off-shell and nonlocal effects in proton-nucleus elastic scattering, 9:32237 (J;US)
Inelastic Scattering
Description of continuum spectra in reactions with light ions by direct multi step processes, 9:32168 (RA;DE;In German)
Multiple Production
Properties of pC and pTa interactions at Psub(p)=10 GeV/c accompanied by the emission of cumulative protons and π mesons, 9:32088 (R;XJ;In Russian)
Particle Production
Cumulative production of tritium, ^{3}He, ^{4}He nuclei, 9:32089 (R;XJ;In Russian)
Hard αp and $\alpha\alpha$ interactions, 9:32075 (RA;HU)
Inclusive eta meson production by positive hadrons with the momentum of 10.5 GeV/c, 9:31984 (R;SU;In Russian)
Inclusive neutral pion production in interactions of positive particles with beryllium nuclei at 10.5 GeV/c, 9:31983 (R;SU;In Russian)
Particle production in α-α and α-p collisions at the CERN ISR, 9:32074 (RA;HU)
Precompound-Nucleus Emission
INTERMEDIATE STRUCTURE OF EMISSION ENERGY SPECTRA IN PRE-EQUILIBRIUM REACTIONS WITH NUCLEONS, 9:32116 (RA;SU;IN RUSSIAN)
Quasi-Elastic Scattering
Study of two-nucleon wave functions in ^{3}He, 9:32077 (R;CA)
PROTON-ANTIPROTON INTERACTIONS
Need to plan for a full-scale lns-physics program at the SSC, 9:31979 (R;US)
Particle Production
Calculation of the conjoined production of Higgs bosons and heavy flavours in p-antip collisions, 9:32025 (R;CA)
Electroweak interactions at the SSC: introductory remarks multi W and Z production, 9:32021 (R;US)
PROTON-DEUTERON INTERACTIONS
Analyzing Power
Pion production from deuterium by the bombardment with polarized protons of 277 and 500 MeV, 9:32004 (R;CA)
Particle Production
Pion production from deuterium by the bombardment with polarized protons of 277 and 500 MeV, 9:32004 (R;CA)
PROTON-INDUCED X-RAY EMISSION ANALYSIS
See PIXE ANALYSIS
PROTON-NEUTRON INTERACTIONS
Capture
Low-energy n-p capture as a probe of two-nucleon dynamics, 9:32002 (R;CA)
PROTON-PROTON INTERACTIONS
Need to plan for a full-scale lns-physics program at the SSC, 9:31979 (R;US)
Elastic Scattering
Method for analyzing elastic scattering data sampled with the SFM-detector at the CERN ISR, 9:31995 (RA;SE)
J-J Coupling
Spin-spin correlations in the reaction (anti)p(anti(p)) $\rightarrow$ pnπ+ at intermediate energies, 9:32007 (R;CA)
Particle Production
Particle ratios at high transverse momentum in pp collisions at $\sqrt{s}$ = 63 GeV and correlations between high p/sub T/ identified charged particles and associated identified charged particles, 9:31980 (R;US)
PROTONS
Particle Production
Correlations of identical particles in inelastic and central carbon-carbon collisions at P=4.2 GeV/c per nucleon, 9:32081 (RA;HU)
Experimental data on the inclusive cross sections of protons, deuterons and tritium cumulative production, 9:31990 (R;XJ;In Russian)
Polarized Products
Polarization measuring for proton of recoil in the γ+p $\rightarrow$ p+π^0 reaction at Esub(γ)=0,65-1,4 GeV for the angles THETAsub(π) < 90 deg in the center-of-mass system, 9:31988 (RA;SU;In Russian)
Semileptonic Decay
Search for proton decay and other rare phenomena, 9:32037 (J;GB)
Slowing-Down
Computation of stopping powers of protons and alpha particles in multicomponent substances in a wide energy range, 9:32243 (RA;SU;In Russian)
Weak Particle Decay
Chiral Lagrangian calculation of nucleon decay modes induced by d = 5 supersymmetric operators, 9:32022 (R;GB)
PROTOTYPE FAST REACTOR DOUNREAY
See PFR REACTOR
PRTR REACTOR
Fission Product Release
Plutonium Recycle Test Reactor (PRTR) accident. A final report on the investigation of fission product chemical forms, 9:30938 (R;US)
Fuel Element Failure
Plutonium Recycle Test Reactor (PRTR) accident. A final report on the investigation of fission product chemical forms, 9:30938 (R;US)
Reactor Accidents
Plutonium Recycle Test Reactor (PRTR) accident. A final report on the investigation of fission product chemical forms, 9:30938 (R;US)
PSI-3105 RESONANCES
Radiative Decay
Glueballs and beyond, 9:32013 (R;US)
New results on radiative J/psi decays from MARK III at SPEAR, 9:31997 (R;US)
PSYCHOSES

Blowdown
An analytical study of azimuthal temperature distribution in pressurized water reactor fuel rods under steady-state and blowdown conditions, 9:30963 (J;US)
Blowers
EPRI research on power plant mechanical auxiliaries, 9:30702 (R;US)
Burnup
Fuel cycle cost considerations of increased discharge burnups, 9:30710 (J;US)
General features of advanced pressurized water reactors with improved fuel utilization, 9:30736 (J;US)
Containment
Containment analysis techniques: a state-of-the-art summary. Final report, 9:30937 (R;US)
Containment Buildings
Integrity of containment penetrations under severe accident conditions, 9:30949 (R;US)
Containment Spray Systems
Experimental modeling of hydrogen evolution rates from surfaces with exposed aluminum in contact with containment sprays in pressurized water reactor nuclear power plants, 9:30740 (J;US)
Containment Systems
Phenomenological uncertainties in the suspended radionuclide concentrations in containment during severe LWR accidents, 9:30947 (R;US)
Coolant Cleanup Systems
Reactor coolant high-temperature filtration. Volume 2. Evaluation of effectiveness in reducing occupational radiation exposure. Final report, 9:30718 (R;US)
Reactor coolant high-temperature filtration. Volume 3. Conceptual system designs and licensing concerns. Final report, 9:30719 (R;US)
Reactor coolant high-temperature filtration. Volume 4. Engineering details of the Byron nuclear station high-temperature filtration facility. Final report, 9:30720 (R;US)
Decontamination
Decontamination impacts on waste management and disposal, 9:30929 (RA;US)
Waste arising from a dilute chemical decontamination, 9:30840 (RA;US)

ECCS
FRANTIC II: applications to standby safety systems, 9:30936 (R;US)
Reflooding of a PWR bundle: Pericles programme and first results, 9:30905 (RA;US)
Electric Motors
EPRI research on power plant mechanical auxiliaries, 9:30702 (R;US)
Flowmeters
Application of a thermocouple-correlation-type transit-time flowmeter in a pressurized water reactor environment, 9:30869 (R;US)
Fluid-Structure Interactions
Investigations on flow-induced vibrations and fluid-elastic phenomena in PWR-models, 9:30732 (R;DE;In German)
Fuel Assemblies
Some neutron physical consequences of maximizing the conversion ratio of pressurized water reactors operated in the uranium-plutonium cycle, 9:30735 (J;US)
Fuel Cycle
An evaluation of pressurized water reactor frequent refueling, 9:30743 (J;US)
Fuel cycle cost considerations of increased discharge burnups, 9:30710 (J;US)
Proof of evidence [BNFL 2]. Sizewell 'B' power station public inquiry, 9:30713 (R;GB)
Some neutron physical consequences of maximizing the conversion ratio of pressurized water reactors operated in the uranium-plutonium cycle, 9:30735 (J;US)
Fuel Management
An evaluation of pressurized water reactor frequent refueling, 9:30743 (J;US)
Some neutron physical consequences of maximizing the conversion ratio of pressurized water reactors operated in the uranium-plutonium cycle, 9:30735 (J;US)
The role of plutonium-238 in nuclear fuel cycles, 9:30711 (J;US)
Fuel Rods
An analytical study of azimuthal temperature distribution in pressurized water reactor fuel rods under steady-state and blowdown conditions, 9:30963 (J;US)
High temperature postirradiation materials performance of spent pressurized water reactor fuel rods under dry storage conditions, 9:30741 (J;US)
Gaseous Wastes
PWR waste gas system analysis. Final report, 9:30844 (R;US)
Heat Transfer
Experimental measurement of axially varying vapor superheats in convective film boiling, 9:30898 (RA;US)
Inverted annular two-phase flow experiments and modeling (phenomenological modeling of two-phase flow in water reactor), 9:30899 (RA;US)
Proceedings of the eleventh water reactor safety research information meeting. Volume 1, 9:30885 (R;US)
Heaters

RADIOACTIVE WASTE DISPOSAL
Backfilling
Backfill performance requirements--estimates from transport models, 9:30368 (J;US)
Basalt as a potential waste package backfill component in a repository located within the Columbia River basalt, 9:30366 (J;US)
Chemical aspects governing the choice of backfill materials for nuclear waste repositories, 9:30367 (J;US)
Containers
Waste package, 9:30335 (RA;DK)
Depth
Why the deep hole concept, 9:30338 (RA;DK)
Environmental Impacts
Interaction between waste and salt, 9:30340 (RA;DK)
Geochemistry
NRC nuclear waste geochemistry 1983, 9:30345 (R;US)
Geologic Deposits
Problems of solidificated radioactive wastes burial into deep geological structures, 9:30342 (RA;SU;In Russian)
High-Level Radioactive Wastes
Bibliography of the published reports, papers and articles on the Nevada Nuclear Waste Storage Investigations. Revision 4, 9:30347 (R;US)
NRC nuclear waste geochemistry 1983, 9:30345 (R;US)
Radioactive waste management. Volume 3. Proceedings Series, 9:30360 (R;AT)
Intermediate-Level Radioactive Wastes
Conditions for the test emplacement of intermediate-level radioactive wastes in chamber 8a of the 511 m level of the Asse Salt Mine, 9:30363 (TG;US)
Radioactive waste management. Volume 3. Proceedings Series, 9:30360 (R;AT)
International Cooperation
Eighth international NEA/Seabed Working Group meeting Varese, Italy, May 30-June 3, 1983, 9:30356 (R;US)
Low-Level Radioactive Wastes
Development of a low-level waste risk methodology, 9:30389 (R;US)
Part 61 licensing requirement for land disposal of radioactive waste, 9:30330 (RA;US)
Radioactive waste management. Volume 3. Proceedings Series, 9:30360 (R;AT)
Marine Disposal
Environmental assessment methodologies for sea dumping of radioactive wastes. Report based on the joint IAEA/IMO technical committee meeting on environmental assessment methodologies for sea dumping of radioactive wastes in co-operation with UNEP held in Vienna, 30 August - 3 September 1982, 9:30385 (R;AT)
Radiation Monitoring
NNWSI preliminary radiological monitoring plan for the environment, 9:30358 (R;US)
Radionuclide Migration
Backfill performance requirements--estimates from transport models, 9:30368 (J;US)
Development of a low-level waste risk methodology, 9:30389 (R;US)
NNWSI preliminary radiological monitoring plan for the environment, 9:30358 (R;US)
Waste disposal concepts, 9:30337 (RA;DK)
Research Programs
Annual report 1982, 9:32393 (R;BE)
Resins
Bituminous solidification, disposal, transport and burial of spent ion-exchange resins. Part of a coordinated programme on treatment of spent ion exchange resins. Final report for the period 1 June 1980 - 30 June 1983, 9:30334 (R;AT)
Risk Assessment
Development of a low-level waste risk methodology, 9:30389 (R;US)
Salt Deposits
Conditions for the test emplacement of intermediate-level radioactive wastes in chamber 8a of the 511 m level of the Asse Salt Mine, 9:30363 (TG;US)
Interaction between waste and salt, 9:30340 (RA;DK)
Potential for cost reduction in the Waste Isolation Pilot Plant (WIPP) project, 9:30322 (R;US)
Problems of solidificated radioactive wastes burial into deep geological structures, 9:30342 (RA;SU;In Russian)

Temperature field, 9:30339 (RA;DK)
Waste disposal concepts, 9:30337 (RA;DK)
Why the deep hole concept, 9:30338 (RA;DK)
Sea Bed
1982 subseabed disposal program annual report. Thermal response studies, October 1981 through September 1982, 9:30352 (R;US)
Circulation modeling for seabed disposal of nuclear wastes: status, progress and intercomparisons. Report of the interim meeting of the Seabed Working Group Physical Oceanography Task Group, Cambridge, U.K., 31 August-3 September 1982, 9:30354 (R;US)
Eighth international NEA/Seabed Working Group meeting Varese, Italy, May 30-June 3, 1983, 9:30356 (R;US)
NEA Seabed Working Group status on site qualification for nuclear waste disposal within deep-sea sediment, 9:30355 (R;US)
Site Selection
Land use and withdrawal actions necessary for and in support of the NNWSI project, 9:31694 (R;US)
Waste-Rock Interactions
Interaction between waste and salt, 9:30340 (RA;DK)
RADIOACTIVE WASTE FACILITIES
In situ tests and instrumentation in the WIPP facility, 9:30359 (R;US)
Containers
Decontamination processes for waste glass canisters, 9:30369 (J;US)
Cost
Potential for cost reduction in the Waste Isolation Pilot Plant (WIPP) project, 9:30322 (R;US)
Design
NNWSI repository operational procedures for receiving, packaging, emplacing, and retrieving high-level and transuranic waste, 9:30353 (R;US)
Licensing
NRC nuclear waste geochemistry 1983, 9:30345 (R;US)
Operation
NNWSI repository operational procedures for receiving, packaging, emplacing, and retrieving high-level and transuranic waste, 9:30353 (R;US)
Start-Up
Waste Experimental Reduction Facility: description and progress report, 9:30325 (R;US)
RADIOACTIVE WASTE MANAGEMENT
Meetings
Proceedings of the 1983 civilian radioactive waste management information meeting, 9:30319 (R;US)
Radioactive waste management. Volume 3. Proceedings Series, 9:30360 (R;AT)
Planning
Waste management planning for outages, 9:30834 (RA;US)
Waste management planning, 9:30836 (RA;US)
Program Management
DOE needs to evaluate fully the waste management effects of extending the useful life of nuclear fuel, 9:30333 (R;US)
Waste Oils
Management of oil in radwaste systems, 9:30329 (RA;US)
RADIOACTIVE WASTE PROCESSING
Cesium
Electrodialytic decontamination of spent ion exchange resins, 9:30348 (R;CA)
Cost Benefit Analysis
Nuclear waste partitioning and transmutation, 9:30373 (J;US)
Financial Incentives
Nuclear waste partitioning and transmutation, 9:30373 (J;US)
High-Level Radioactive Wastes
Evaluation of zeolite mixtures for decontaminating high-activity-level water at the Three Mile Island Unit 2 Nuclear Power Station, 9:30833 (R;US)
Problems of preparation of high-level radioactive wastes for disposal, 9:30341 (RA;SU;In Russian)
Ion Exchange Materials
Electrodialytic decontamination of spent ion exchange resins, 9:30348 (R;CA)
Liquid Wastes
Liquid waste treatment, 9:30327 (RA;US)
Low-Level Radioactive Wastes
Liquid waste treatment, 9:30327 (RA;US)
Summary of EPRI's low-level radioactive waste program, 9:30328 (RA;US)
Utility radwase volume reduction program at Northeast Utilities, 9:30837 (RA;US)
Waste Experimental Reduction Facility: description and progress report, 9:30325 (R;US)
Risk Assessment
Nuclear waste partitioning and transmutation, 9:30373 (J;US)
Solidification
Bituminous solidification, disposal, transport and burial of spent ion-exchange resins. Part of a coordinated programme on treatment of spent ion exchange resins. Final report for the period 1 June 1980 - 30 June 1983, 9:30334 (R;AT)
Review of a test program for qualifying the solidification of Epicor-II resins with cement, 9:30346 (R;US)
Transmutation
Nuclear waste partitioning and transmutation, 9:30373 (J;US)
Vitrification
Problems of preparation of high-level radioactive wastes for disposal, 9:30341 (RA;SU;In Russian)
Waste Oils
Management of oil in radwaste systems, 9:30329 (RA;US)
RADIOACTIVE WASTE STORAGE
Radioactive waste management as approached by nuclear materials management, 9:30396 (R;US)
Low-Level Radioactive Wastes
Conditions for the storage of low-level radioactive wastes in the ASSE salt mine, 9:30364 (TG;US)
RADIOACTIVITY TRANSPORT
Reactor coolant high-temperature filtration. Volume 2. Evaluation of effectiveness in reducing occupational radiation exposure. Final report, 9:30718 (R;US)
RADIOAPPLICATORS

REACTOR CORE DISRUPTION
ROD DROP ACCIDENTS
Thermal/hydraulic analysis research program quarterly report, October-December 1983. Volume 4 (TRAC-PF1/MOD1 assessment; Semiscale S-UT-8 analysis), 9:30932 (R;US)
Containment
Analysis of a 1:8 scale steel containment model subject to internal static pressurization, 9:30952 (R;US)
Containment Systems
CHART; iodine decay heat on charcoal adsorbers. Software, 9:30809 (R;US)
Critical Heat Flux
Hydrodynamics of post CHF region, 9:30861 (R;US)
Economic Impact
Economic risks of nuclear power reactor accidents (PWR;BWR), 9:30939 (R;US)
Evacuation
Planning for spontaneous evacuation during a radiological emergency, 9:30957 (J;US)
Evaluation
EPRI source term research, 9:30912 (RA;US)
Fault Tree Analysis
SETS user's manual for accident sequence analysis (Set Equation Transformation System), 9:30934 (R;US)
Fission Product Release
Investigation of the nuclear source term, 9:30945 (R;US)
Phenomenological uncertainties in the suspended radionuclide concentrations in containment during severe LWR accidents, 9:30947 (R;US)
Fission Products
Influence of radiation on formation of fission product aerosols during LWR degraded core accidents, 9:30858 (R;US)
Heat Flux
Post-CHF model assessment with Lehigh nonequilibrium data, 9:30950 (R;US)
Heat Transfer
Forced convective, nonequilibrium post-CHF heat transfer experiment: description, data analysis and correlation comparison, 9:30866 (R;US)
Pressure Gradients
Integrity of containment penetrations under severe accident conditions (PWR; BWR), 9:30949 (R;US)
Radiation Monitoring
Measuring radioiodine in the environment after a nuclear power plant accident, 9:30923 (RA;US)
Radioactive Aerosols
LWR aerosol containment experiments (LACE) program and initial test results, 9:30873 (R;US)
RAFT: a computer model for formation and transport of fission product aerosols in LWR primary system, 9:30859 (R;US)
Sensitivity study of aerosol agglomeration and deposition using the MAEROS model, 9:30946 (R;US)
Radioactivity Transport
RAFT: a computer model for formation and transport of fission product aerosols in LWR primary system, 9:30859 (R;US)
Research Programs
EPRI sponsored TMI-2 research program, 9:30911 (RA;US)
Risk Assessment
Economic risks of nuclear power reactor accidents (PWR;BWR), 9:30939 (R;US)
Simulation
RELAP5/MOD2 post-CHF heat and mass transfer models, 9:30864 (R;US)
Socio-Economic Factors
Economic risks of nuclear power reactor accidents (PWR;BWR), 9:30939 (R;US)
Temperature Gradients
Integrity of containment penetrations under severe accident conditions (PWR; BWR), 9:30949 (R;US)
REACTOR CHANNELS
Passage through the reactor.
Flow Blockage
An analytical study of azimuthal temperature distribution in pressurized water reactor fuel rods under steady-state and blowdown conditions, 9:30963 (J;US)
Neutron Density
Effective diffusion coefficients for low density cylindrical channels, 9:30783 (J;US)
Neutron Diffusion Equation
Effective diffusion coefficients for low density cylindrical channels, 9:30783 (J;US)
Neutron Transport Theory
Effective diffusion coefficients for low density cylindrical channels, 9:30783 (J;US)
REACTOR COMPONENTS

SECONDARY COOLANT CIRCUITS

Computerized Simulation
Dynamic analysis of the condensate feedwater system in boiling water reactor plants, 9:30707 (J;US)
Flow Rate
Flow measurement in sodium and water using pulsed-neutron activation: Part 2, experiment, 9:30774 (J;US)
Flow Regulators
Dynamic analysis of the condensate feedwater system in boiling water reactor plants, 9:30707 (J;US)
Fluid-Structure Interactions
Dynamic analysis of the condensate feedwater system in boiling water reactor plants, 9:30707 (J;US)
Forced Convection
Heat transfer and pressure drop in sodium boiling in tubes, 9:30969 (J;US)
Heat Transfer
Heat transfer and pressure drop in sodium boiling in tubes, 9:30969 (J;US)
Hydraulics
Flow measurement in sodium and water using pulsed-neutron activation: Part 2, experiment, 9:30774 (J;US)
Hydrodynamics
Dynamic analysis of the condensate feedwater system in boiling water reactor plants, 9:30707 (J;US)
Laminar Flow
Flow measurement in sodium and water using pulsed-neutron activation: Part 1, theory, 9:30775 (J;US)
Liquid Flow
Flow measurement in sodium and water using pulsed-neutron activation: Part 2, experiment, 9:30774 (J;US)
Pipes
Damping test results for straight sections of 3-inch and 8-inch unpressurized pipes (PWR; BWR), 9:30941 (R;US)
Recent observations of cracks in large diameter BWR piping: analysis and remedial actions, 9:30913 (RA;US)
Turbulent Flow
Flow measurement in sodium and water using pulsed-neutron activation: Part 1, theory, 9:30775 (J;US)
Two-Phase Flow
Heat transfer and pressure drop in sodium boiling in tubes, 9:30969 (J;US)

REACTOR CORE DISRUPTION
After-Heat Removal
Boiling and dryout predictions in postaccident heat removal situations, 9:30771 (J;US)
Chemical Reactions
Application of sodium-concrete reaction data on breeder-reactor safety analysis, 9:30959 (J;US)
Heat Transfer
Heat transfer and fluid dynamics under simulated degraded core conditions, 9:30900 (RA;US)
The effects of sodium entrainment and heat transfer with two-phase UO_2 during a hypothetical core disruptive accident, 9:30967 (J;US)
Hydraulics
The effects of sodium entrainment and heat transfer with two-phase UO_2 during a hypothetical core disruptive accident, 9:30967 (J;US)
Hydrodynamics
Heat transfer and fluid dynamics under simulated degraded core conditions, 9:30900 (RA;US)

REACTOR CORES
Breeding Blankets
A fast reactor core concept using an internal blanket, 9:30782 (J;US)
Design
A fast reactor core concept using an internal blanket, 9:30782 (J;US)
General features of advanced pressurized water reactors with improved fuel utilization, 9:30736 (J;US)
Flow Blockage
Sodium flow blockage in liquid-metal fast breeder reactors: sweepout of a planar blockage, 9:30966 (J;US)
Fluid Mechanics
Optimization of a variable flow allocation scheme in heterogeneous liquid-metal fast breeder reactors, 9:30781 (J;US)
Sodium flow blockage in liquid-metal fast breeder reactors: sweepout of a planar blockage, 9:30966 (J;US)
Gas Flow
Estimate of cross flow in high temperature gas-cooled reactor fuel blocks, 9:30749 (J;US)
Liquid Flow
Optimization of a variable flow allocation scheme in heterogeneous liquid-metal fast breeder reactors, 9:30781 (J;US)
Neutron Flux
DIF3D: a code to solve one-, two-, and three-dimensional finite-difference diffusion theory problems (LMFBR), 9:30761 (R;US)
Power Factor
Power estimation in the pressurized water reactor, 9:30742 (J;US)
Radiation Streaming
Neutron streaming in pebble beds, 9:30752 (J;US)
Reactivity
Results from an international intercomparison of fundamental mode benchmark calculations for steam ingress into gas-cooled fast reactor cores, 9:30770 (J;US)
Reactor Materials
Materials development for fast breeder reactor cores, 9:30773 (J;US)

REACTOR DECOMMISSIONING
Decontamination
Overview of decontamination as a precursor to decommissioning, 9:30925 (RA;US)
Radiation Protection
Overview of decontamination as a precursor to decommissioning, 9:30925 (RA;US)

REACTOR FUEL ELEMENTS
See FUEL ELEMENTS

REACTOR FUELING
Annual Variations
An evaluation of pressurized water reactor frequent refueling, 9:30743 (J;US)
Economic Analysis
An evaluation of pressurized water reactor frequent refueling, 9:30743 (J;US)
Schedules
An evaluation of pressurized water reactor frequent refueling, 9:30743 (J;US)
Boiling water reactor cycle extension operation, 9:30708 (J;US)

REACTOR FUELS
See NUCLEAR FUELS

REACTOR INSTRUMENTATION
See also IN CORE INSTRUMENTS
Errors
Power estimation in the pressurized water reactor, 9:30742 (J;US)
Sensitivity Analysis
Power estimation in the pressurized water reactor, 9:30742 (J;US)

REACTOR INTERNALS
Fluid-Structure Interactions
Moving force on a fluid supported beam, 9:30867 (R;US)
Hydrodynamics
Moving force on a fluid supported beam, 9:30867 (R;US)

REACTOR KINETICS
Finite Difference Method
DIF3D: a code to solve one-, two-, and three-dimensional finite-difference diffusion theory problems (LMFBR), 9:30761 (R;US)
Monte Carlo Method
A comparison of maximum likelihood and other estimators of eigenvalues from several correlated Monte Carlo samples, 9:30805 (J;US)
Neutron Diffusion Equation
DIF3D: a code to solve one-, two-, and three-dimensional finite-difference diffusion theory problems (LMFBR), 9:30761 (R;US)

REACTOR KINETICS EQUATIONS
Information Validation
Statistical screening of input variables in a complex computer code, 9:30800 (J;US)
Sensitivity Analysis
Statistical screening of input variables in a complex computer code, 9:30800 (J;US)
Statistics
Statistical screening of input variables in a complex computer code, 9:30800 (J;US)
REACTOR LATTICE PARAMETERS
Calculation Methods
An evaluation of different methods for space-dependent resonance shielding of cross sections in fast reactors, 9:30784 (J;US)
REACTOR LATTICE PITCH
See REACTOR LATTICE PARAMETERS
REACTOR LATTICES
Design
General features of advanced pressurized water reactors with improved fuel utilization, 9:30736 (J;US)
REACTOR LICENSING
Legal Aspects
Control density of the administrative courts with regard to nuclear licensing, 9:30787 (R;DE;In German)
REACTOR MATERIALS
To be assigned in conjunction with the specific descriptor for the material used in a reactor, provided this descriptor is not yet up-posted to reactor materials.
See also NUCLEAR FUELS
Benchmarks
Materials development for fast breeder reactor cores, 9:30773 (J;US)
Capture
Measurements of structural material capture to uranium-235 fission rate ratios in an intermediate spectrum assembly, 9:30785 (J;US)
Certification
Materials development for fast breeder reactor cores, 9:30773 (J;US)
Chemical Reactions
Experimental modeling of hydrogen evolution rates from surfaces with exposed aluminum in contact with containment sprays in pressurized water reactor nuclear power plants, 9:30740 (J;US)
Compression Strength
PSF Blind Test instructions and data packages, 9:30703 (R;US)
Corrosion Denting
Causes of denting. Volume 3. Plant chemistry correlations. Final report, 9:30716 (R;US)
Neutron Reactions
Measurements of structural material capture to uranium-235 fission rate ratios in an intermediate spectrum assembly, 9:30785 (J;US)
Physical Radiation Effects
PSF blind test SSC, SPVC, and SVBC physics-dosimetry-metallurgy data packages (PWR, BWR), 9:30704 (R;US)
PSF Blind Test instructions and data packages, 9:30703 (R;US)
Quantitative Chemical Analysis
Analytical methods for the determination of boron in reactor materials programme, 9:31278 (R;IN)
Stress Corrosion
Effects of variations in BWR water chemistry on the electrochemical potential of stainless steel and other metals, 9:30701 (R;US)
Tensile Properties
PSF Blind Test instructions and data packages, 9:30703 (R;US)
REACTOR NOISE
Chapman-Kolmogorov Equation
Binary operators and their Green's functions, 9:30803 (J;US)
Green Function
Binary operators and their Green's functions, 9:30803 (J;US)
Langevin Equation
Binary operators and their Green's functions, 9:30803 (J;US)
REACTOR OPERATION
Engineers
Alternative approaches to providing engineering expertise on shift, 9:30943 (R;US)
Human Factors
Place of human-factors in the work of the Atomic Energy Control Board, 9:30874 (R;CA)
REACTOR OPERATORS
Test Facilities
Design of a generic interactive operator test station, 9:30825 (R;US)
Training
Simulator fidelity and training effectiveness: a comprehensive bibliography with selected annotations, 9:30692 (R;US)
REACTOR PHYSICS
Use only for indexing articles of very broad coverage, such as annual reviews, text book, etc.
Meetings
3. National Meeting of Reactor Physics, 9:30796 (R;BR)
REACTOR PROTECTION SYSTEMS

SALMON
Biological Shock
Effects of suspended volcanic ash and thermal shock on susceptibility of juvenile salmonids to disease, 9:31814 (R;US)
SALT DEPOSITS
Geology
Model calculations to formation of salt deposits, 9:31843 (R;DE;In German)
Hydrology
Well completion report - Sawyer No. 1 (PD-3) well, Palo Duro Basin, Texas: unanalyzed data, 9:30313 (R;US)
Well completion report - Detten No. 1 (PD-6) well, Palo Duro Basin, Texas: unanalyzed data, 9:30314 (R;US)
Well completion report - Zeeck No. 1 (PD-7) well, Palo Duro Basin, Texas: unanalyzed data, 9:30315 (R;US)
Inclusions
Migration of brine inclusions in salt, 9:30384 (J;US)
Stratigraphy
Well completion report - Sawyer No. 1 (PD-3) well, Palo Duro Basin, Texas: unanalyzed data, 9:30313 (R;US)
Well completion report - Detten No. 1 (PD-6) well, Palo Duro Basin, Texas: unanalyzed data, 9:30314 (R;US)
Well completion report - Zeeck No. 1 (PD-7) well, Palo Duro Basin, Texas: unanalyzed data, 9:30315 (R;US)
Stress Analysis
Field tests of stress measurement techniques in rock salt, 9:30357 (R;US)
Stresses
Field tests of stress measurement techniques in rock salt, 9:30357 (R;US)
Temperature Gradients
Migration of brine inclusions in salt, 9:30384 (J;US)
Temperature field, 9:30339 (RA;DK)
SALT TRANSPORT PROCESS
See PYROCHEMICAL REPROCESSING
SAMARIUM 144 TARGET
Deuteron Reactions
CCBA analysis of $13/2^+$ levels in ^{145}Sm, 9:32109 (RA;DE;In German)
SAMARIUM 145
Energy Levels
CCBA analysis of $13/2^+$ levels in ^{145}Sm, 9:32109 (RA;DE;In German)
SAMPLERS
See also AIR SAMPLERS
Corrosion product sampling from hot water systems, 9:30723 (RA;US)
Reactor crud sampling, 9:30696 (RA;US)
Design
Multi-capillary isokinetic sampling head (PWR), 9:30728 (RA;US)
Performance
Corrosion product sampling experience at Babcock & Wilson, 9:30724 (RA;US)
SAMPLING
Computerized Simulation
DIGMAN: a computer program to illustrate the complexities in sampling commercial low-level waste sites for radionuclide spills or migration, 9:30387 (R;US)
Meetings
Proceedings: workshop on corrosion product sampling from hot water systems, 9:30693 (R;US)
Recommendations
Development of sampling method for milled peat, 9:30166 (R;FI;In Finnish)
SAN FRANCISCO BAY
Marshes
Ecology of San Francisco Bay tidal marshes: a community profile, 9:31700 (R;US)
SANDIA LABORATORIES
Research Programs
Sandia technology. Vol. 8, No. 1, 9:31363 (R;US)
SANDSTONES
Cracks
Microcrack permeability in tight gas sandstone, 9:30254 (J;US)
Fluid Flow
Microcrack permeability in tight gas sandstone, 9:30254 (J;US)
Geochemistry
Geochemistry of the Dakota Formation of northwestern New Mexico: relevance to radioactive waste studies, 9:30365 (J;US)
Permeability
Microcrack permeability in tight gas sandstone, 9:30254 (J;US)
SANITARY LANDFILLS
Helium-neon laser remote measurement of methane, 9:31124 (BA;US)
Chemical Composition
Study about the behaviour of inorganic and organic pollutants in aerobic and anaerobic model landfills, 9:31688 (BA;US)
Environmental Effects
Study about the behaviour of inorganic and organic pollutants in aerobic and anaerobic model landfills, 9:31688 (BA;US)
Gas Yields
Enhancement of gas production in sanitary landfill sites. Experiences in West Germany, 9:31134 (BA;US)
Generation of electricity from landfill gas in Germany and in particular at the utilization plant AM Lemberg near Stuttgart, 9:31135 (BA;US)
Landfill gas recovery: state of the art in Italy. A feasibility study for one of the biggest Italian landfills, 9:31133 (BA;US)
Operation
Enhancement of gas production in sanitary landfill sites. Experiences in West Germany, 9:31134 (BA;US)
Power Generation
Generation of electricity from landfill gas in Germany and in particular at the utilization plant AM Lemberg near Stuttgart, 9:31135 (BA;US)
SATELLITE POWER SYSTEM

SCINTILLATOR-PHOTODIODE DETECTORS
Calibration
Experimental procedures for the calibration of scintillation cells used in the determination of radon gas concentrations, 9:31559 (R;CA)
Design
High-speed motion neutron radiography, 9:31610 (J;US)
Optical Fibers
Progress in the development of scintillating optical fibers, 9:31593 (J;US)
Performance
High-speed motion neutron radiography, 9:31610 (J;US)
Time Resolution
High-speed motion neutron radiography, 9:31610 (J;US)
SCINTILLATION DETECTORS
See SCINTILLATION COUNTERS
SCINTILLATOR-PHOTODIODE DETECTORS
Image Intensifiers
A diode intensifier tube designed for scintillation detection, 9:31582 (J;US)
Performance
Scintillation detection with large-area reach-through avalanche photodiodes, 9:31581 (J;US)
SCREWS
See FASTENERS
SCRUBBERS
See also DRY SCRUBBERS
Maintenance
Maintenance and reliability of utility flue-gas desulfurization: projections vs. experience, 9:31468 (J;US)
Reliability
Maintenance and reliability of utility flue-gas desulfurization: projections vs. experience, 9:31468 (J;US)
SEA BED
Acoustic Testing
Study of the superficial sea sediments by the measurements of the reflexion coefficient (sonic), 9:30226 (R;FR;In French)
Heat Transfer
1982 subseabed disposal program annual report. Thermal response studies, October 1981 through September 1982, 9:30352 (R;US)
SEA DISPOSAL
See MARINE DISPOSAL
SEBACEOUS GLANDS
See SKIN
SECONDARY BATTERIES
See ELECTRIC BATTERIES
SECONDARY COOLANT CIRCUITS
Water Chemistry
Causes of denting. Volume 3. Plant chemistry correlations. Final report, 9:30716 (R;US)
SECONDARY EMISSION
Calculation Methods
Derivation of a dose mean value of lineal energy from variance measurements of a secondary electron emission current, 9:30799 (J;US)
Diffusion Length
Derivation of a dose mean value of lineal energy from variance measurements of a secondary electron emission current, 9:30799 (J;US)
Mean Free Path
Derivation of a dose mean value of lineal energy from variance measurements of a secondary electron emission current, 9:30799 (J;US)
SECURITY
Survey of commercial non-nuclear security programs. Final report, 9:30405 (R;US)
SEDIMENTATION
Computerized Simulation
Coastal flooding and storm protection program; field verification program. Mathematical modeling of three-dimensional coastal currents and sediment dispersion: model development and application. Final report, 9:31857 (R;US)
Mathematical Models
Coastal flooding and storm protection program; field verification program. Mathematical modeling of three-dimensional coastal currents and sediment dispersion: model development and application. Final report, 9:31857 (R;US)
SEDIMENTS
Heat Transfer
1982 subseabed disposal program annual report. Thermal response studies, October 1981 through September 1982, 9:30352 (R;US)
Marine Surveys
Study of the superficial sea sediments by the measurements of the reflexion coefficient (sonic), 9:30226 (R;FR;In French)
Mechanical Properties
1982 Subseabed Disposal Program: geotechnical laboratory and modeling studies. Annual report, October 1981-September 1982, 9:30351 (R;US)
Radioactivity
Inventories of $^{239,240}Pu$, ^{241}Am, ^{137}Cs, and ^{60}Co in Columbia River sediments from Hanford to the Columbia River estuary, 9:31721 (J;US)
Temperature Effects
1982 Subseabed Disposal Program: geotechnical laboratory and modeling studies. Annual report, October 1981-September 1982, 9:30351 (R;US)
SEISMIC EFFECTS
Fluid-Structure Interactions
Moving force on a fluid supported beam, 9:30867 (R;US)
Hydrodynamics
Moving force on a fluid supported beam, 9:30867 (R;US)
SELENIUM
Material Balance
Elemental partitioning in ash depositories and material balances for a coal burning facility by spark source mass spectrometry, 9:30167 (J;US)
SELENIUM 78
Excited States
Lifetimes of ^{78}Se nucleus excited states measured by a plunger method, 9:32105 (RA;SU;In Russian)
SELF-POTENTIAL SURVEYS
Resistivity, induced polarization, and self-potential methods in geothermal exploration, 9:30582 (R;US)
SELF-POWERED DETECTORS
See also SELF-POWERED NEUTRON DETECTORS
Data Acquisition Systems
High-speed data acquisition system to measure low-level current from self-powered flux detectors in CANDU nuclear reactors, 9:30754 (R;CA)
SELF-POWERED NEUTRON DETECTORS
Timing Properties
Investigation of the response of improved self-powered neutron detectors, 9:31529 (R;TR;In Turkish)
SEMICONDUCTOR COUNTERS
See SEMICONDUCTOR DETECTORS
SEMICONDUCTOR DETECTORS
See also GE SEMICONDUCTOR DETECTORS
SI SEMICONDUCTOR DETECTORS
SURFACE BARRIER DETECTORS
Spatial Resolution
Proposal for a semiconductor high resolution tracking detector, 9:31605 (J;NL)
SEMICONDUCTOR MATERIALS
If possible index also the specific compounds.
Thermoelectric Properties
Energy associated with the thermopower for binary mixtures of semiconductors, 9:31255 (RA;IL)
SEMICONDUCTOR STORAGE DEVICES
Electronic Circuits
Transient radiation hardening of CMOS LSI and VLSI memory circuits, 9:31433 (R;US)
On-Line Measurement Systems
Dynamic immediate-access memory device with capacity of 16Kx24 bit, 9:31407 (R;XJ;In Russian)
Radiation Hardening
Transient radiation hardening of CMOS LSI and VLSI memory circuits, 9:31433 (R;US)
SEPARATORS (STEAM)
See STEAM SEPARATORS
SEPTUM MAGNETS
Collimators
Temperature rise in the lambertsen septum magnet associated with the positron target, 9:31516 (R;US)

SEQUOYAH NUCLEAR POWER PLANT UNIT-1

SERI
See SOLAR ENERGY RESEARCH INSTITUTE
SERPUKHOV SYNCHROTRON
On-Line Control Systems
Modules for creating the distributed monitoring and control subsystems, 9:31506 (R;SU;In Russian)
SET THEORY
Numerical Solution
Boolean computation of optimum hitting sets, 9:32419 (R;US)
SEWAGE SLUDGE
Anaerobic Digestion
Biogasification of screened RDF and sewage sludge, 9:31127 (BA;US)
Chemical Composition
Feasibility of using municipal wastewater and waste heat to maximize biomass production in energy plantations. Annual progress report, May 15, 1978-March 1, 1981, 9:30510 (R;US)
Resource recovery of municipal wastewater sludge, 9:30184 (BA;US)
Ground Disposal
Effect of sewage sludge on the adsorption of polychlorinated biphenyls by three New Mexico soils, 9:31687 (J;US)
Feasibility of using municipal wastewater and waste heat to maximize biomass production in energy plantations. Annual progress report, May 15, 1978-March 1, 1981, 9:30510 (R;US)
Investigation of sources of selected substances and their remaining in sewage sludge, 9:31082 (R;DE;In German)
Resource recovery of municipal wastewater sludge, 9:30184 (BA;US)
Land Reclamation
Resource recovery of municipal wastewater sludge, 9:30184 (BA;US)
Pollutants
Investigation of sources of selected substances and their remaining in sewage sludge, 9:31082 (R;DE;In German)
Waste Product Utilization
Effect of sewage sludge on the adsorption of polychlorinated biphenyls by three New Mexico soils, 9:31687 (J;US)
SGHWR REACTOR
Reactor Cooling Systems
Experience of continuos isokinetic sampling on the Winfrith Reactor, 9:30755 (RA;US)
Samplers
Experience of continuos isokinetic sampling on the Winfrith Reactor, 9:30755 (RA;US)
SHAFT EXCAVATIONS
Fastening
Planning and preparation of shaft bottoms with rock bolting, 9:31463 (R;DE;In German)
SHEARER LOADERS
Air Curtains
Dust suppression with gateroad production by shearer-loader along with the face line, 9:31460 (R;DE;In German)
Dusts
Technical progress report No. 33 USBM contract JO318097; FMI-BMI-8148, April 1-April 30, 1984, 9:30199 (R;US)
SHEATHS (FUEL)
See FUEL CANS
SHELLS (CONTAINMENT)
See CONTAINMENT SHELLS
SHF RADIATION

SHIFT PROCESSES
Catalysts
Usefulness of a slurry-type Fischer-Tropsch reactor for processing synthesis gas of low hydrogen-carbon monoxide ratios, 9:30451 (RA;US)
SHOCK TUBES
Flow Models
Dusty-gas shock tube, 9:31977 (R;CA)
SHOCK WAVES
Computer Calculations
Calculation of shock problems by using four different schemes, 9:32294 (R;US)
Wave Propagation
Calculation of shock problems by using four different schemes, 9:32294 (R;US)
SHOREHAM REACTOR
Emergency Plans
Planning for spontaneous evacuation during a radiological emergency, 9:30957 (J;US)
SHOTFIRING
See EXPLOSIVE FRACTURING
SHOWER COUNTERS
Detects high energy gamma radiation or high energy particles on basis of cascade showers in layered absorbers.
Fastbus System
Brookhaven FASTBUS ADC'S, 9:31521 (J;US)
Performance
Brookhaven FASTBUS ADC'S, 9:31521 (J;US)
Research Programs
High energy physics research at Texas A & M University. Annual progress report, January 1, 1983-December 31, 1983, 9:31981 (R;US)
Spatial Resolution
Operational performance of a large liquid argon photon calorimeter, 9:31601 (J;NL)
Specifications
Design of a lead glass drift calorimeter with MWPC detection, 9:31597 (J;NL)
Time Resolution
Operational performance of a large liquid argon photon calorimeter, 9:31601 (J;NL)
SI SEMICONDUCTOR DETECTORS
See also LI-DRIFTED SI DETECTORS
Induced radioactivities in silicon and germanium irradiated with high-energy heavy ions, 9:31573 (J;US)
Energy Resolution
Deep level impurities in germanium and silicon: low temperature passivation or removal techniques, 9:31575 (J;US)
Fabrication
Nuclear radiation detectors using high resistivity neutron transmutation doped silicon, 9:31566 (RA;SU)
Specifications
Data acquisition and analysis systems. "Tools of the Trade", 9:31619 (RA;AT)
SIALON
See ALUMINIUM OXIDES
SILICON NITRIDES
SIGNAL DISTORTION
Mathematical Models
Distortions in frequency spectra of signals associated with sampling-pulse shapes, 9:32412 (R;IT)
SIGNALS
Digitizers
Analog quadrature signal to phase angle data conversion by a quadrature digitizer and quadrature counter, 9:31451 (P;US)
Phase Shift
Analog quadrature signal to phase angle data conversion by a quadrature digitizer and quadrature counter, 9:31451 (P;US)
Quadratures
Analog quadrature signal to phase angle data conversion by a quadrature digitizer and quadrature counter, 9:31451 (P;US)
SILICA
Catalytic Effects
Characterization of Ru zeolite catalysts by a hydrogenolysis test reaction network, 9:31320 (RA;US)

Fischer-Tropsch Synthesis over zeolite-supported Ru catalysts derived from $Ru_3(CO)_{12}$, 9:30462 (RA;US)

Electric Conductivity
Measurement of frontal instability of two phase immiscible displacement in tar sands at reservoir conditions, 9:30271 (R;US)

Indoor Air Pollution
Health hazard evaluation determination report No. MHETA 81-108-9004, 9:31659 (R;US)

SILICATE MINERALS
See also CHLORITE MINERALS
CLINOPTILOLITE
FERRITE GARNETS
KAOLINITE
MORDENITE
POLLUCITE
VERMICULITE

Microstructure
Effect of crystallization of grain boundary phase on the high temperature strength of silicon nitride ceramics. Final report, April 1, 1980-March 31, 1984 (Sialon-YAG; Sialon-cordierite), 9:31224 (R;US)

SILICEOUS ROCK
See SANDSTONES

SILICON

Aging
BP-stabilized n-Si and n-GaAs photoanodes, 9:30520 (J;US)

Auger Effect
Chemical information from the KLV Auger spectra of silicon, 9:31887 (RA;AT)

Chemical Analysis
Autoradiography of gallium in silicon, 9:31299 (RA;SU)
Quantitative autoradiography of semiconductor basic materials, 9:31300 (RA;SU)

Crystal Doping
Nuclear radiation detectors using high resistivity neutron transmutation doped silicon, 9:31566 (RA;SU)

Crystal Structure
Studies of surfaces using optical second-harmonic generation, 9:31956 (R;US)

Electron Spin Resonance
Studies of hydrogenated amorphous silicon. Yearly report, 15 August 1982-15 March 1984, 9:30509 (R;US)

Etching
Reactive ion etching of aluminium/silicon, 9:30519 (J;US)

Infrared Spectra
Infra-red spectroscopy of fluorinated silicon, 9:31254 (RA;IL)

Ion Collisions
Analytical model for Rutherford ion backscattering from surfaces, 9:31894 (RA;AT)

Ion Microscopy
Field ion microscopy of silicon, 9:31901 (RA;AT)

Irradiation
Induced radioactivities in silicon and germanium irradiated with high-energy heavy ions, 9:31573 (J;US)

Nuclear Magnetic Resonance
Studies of hydrogenated amorphous silicon. Yearly report, 15 August 1982-15 March 1984, 9:30509 (R;US)

Optical Properties
Studies of surfaces using optical second-harmonic generation, 9:31956 (R;US)

Passivation
Deep level impurities in germanium and silicon: low temperature passivation or removal techniques, 9:31575 (J;US)

Physical Radiation Effects
Induced radioactivities in silicon and germanium irradiated with high-energy heavy ions, 9:31573 (J;US)

Purification
Deep level impurities in germanium and silicon: low temperature passivation or removal techniques, 9:31575 (J;US)

Radioactivity
Induced radioactivities in silicon and germanium irradiated with high-energy heavy ions, 9:31573 (J;US)

Reflectivity
Studies of surfaces using optical second-harmonic generation, 9:31956 (R;US)

Surface Properties
Interactions of molecules with surfaces. Progress report, February 1, 1983-January 31, 1984, 9:31248 (R;US)

SILICON ALLOYS

Physical Radiation Effects
High temperature magnetic after-effect in commercial non-oriented iron-silicon steel following neutron irradiation and plastic deformation, 9:31177 (RA;CH)

SILICON CARBIDES

Chemical Radiation Effects
Fission product Pd-SiC interaction in irradiated coated-particle fuels, 9:30746 (J;US)

Corrosion
Fission product Pd-SiC interaction in irradiated coated-particle fuels, 9:30746 (J;US)

Dispersion Hardening
Improvements in mechanical properties in SiC by the addition of TiC particles, 9:31238 (R;US)

Impregnation
Comparative studies of vapor and liquid-phase impregnation of porous silicon nitride and silicon carbide materials, 9:31235 (TG;US)

Ion Implantation
Ion implantation, ion beam mixing, and annealing studies of metals in Al_2O_3, SiC and Si_3N_4, 9:31220 (R;US)

Wear
Observations on the sliding wear of ceramics, 9:31223 (R;US)

SILICON FLUORIDES

Infrared Spectra
Infra-red spectroscopy of fluorinated silicon, 9:31254 (RA;IL)

SILICON NITRIDES

Impregnation
Comparative studies of vapor and liquid-phase impregnation of porous silicon nitride and silicon carbide materials, 9:31235 (TG;US)

Ion Implantation
Ion implantation, ion beam mixing, and annealing studies of metals in Al_2O_3, SiC and Si_3N_4, 9:31220 (R;US)

Microstructure
Effect of crystallization of grain boundary phase on the high temperature strength of silicon nitride ceramics. Final report, April 1, 1980-March 31, 1984 (Sialon-YAG; Sialon-cordierite), 9:31224 (R;US)

Wear
Observations on the sliding wear of ceramics, 9:31223 (R;US)

SILICON SEMICONDUCTOR DETECTORS
See SI SEMICONDUCTOR DETECTORS

SILICON SOLAR CELLS
Infra-red spectroscopy of fluorinated silicon, 9:31254 (RA;IL)

Production
High-frequency furnace. Tenth quarterly progress report for period ending March 31, 1984, 9:31453 (R;US)

SILVER

Alpha Reactions
Interaction of 2.1 GeV/c/n alpha particles with light and heavy nuclei, 9:32080 (RA;HU)

Diffusion
Inelastic neutron scattering measurements of the diffusion in β-Ag_2S, 9:31270 (J;US)

Electronic Structure
Linear augmented-Slater-type-orbital method for electronic-structure calculations, 9:32262 (J;US)

Solvent Extraction
Use of technical mixtures of carboxylic acids to the extraction of silver, 9:31301 (RA;SU)

Vacancies
Detrapping of vacancies at ^{111}In in quenched silver, 9:31155 (RA;BR)

SILVER 110

Energy-Level Transitions
Intensity distribution of gamma transitions in ^{110}Ag nuclei, 9:32117 (RA;SU;In Russian)

Multipolarity
Intensity distribution of gamma transitions in ^{110}Ag nuclei, 9:32117 (RA;SU;In Russian)

SILVER ALLOYS
Electronic Structure
Calculated low-field Hall coefficient of Ag/sub x/Pd/sub 1-x/ alloys, 9:31206 (J;US)
Hall Effect
Calculated low-field Hall coefficient of Ag/sub x/Pd/sub 1-x/ alloys, 9:31206 (J;US)
SILVER COMPOUNDS
See also SILVER SULFIDES
Antiferromagnetism
Magnetic ordering in CeM_2Si_2 (M = Ag,Au,Pd,Rh) compounds as studied by neutron diffraction, 9:31272 (J;US)
Chemical Reactions
Stability of reflectors with polymeric coatings, 9:30568 (J;US)
Electric Fields
Temperature dependence of the electric field gradient in $AgIn_2$, 9:31153 (RA;BR)
SILVER SULFIDES
Ionic Conductivity
Inelastic neutron scattering measurements of the diffusion in β-Ag_2S, 9:31270 (J;US)
Neutron Diffraction

SOLAR WATER HEATERS
Residential conservation demonstration: domestic hot water. Final report, 9:31064 (R;US)
Economic Analysis
Study of photovoltaic systems adapted to dwellings connected to the electric network, 9:30526 (R;FR;In French)
Optimization
Study of photovoltaic systems adapted to dwellings connected to the electric network, 9:30526 (R;FR;In French)
Performance
Direct gain passive solar, domestic hot water and wind generation system. Final technical report, 9:30553 (R;US)
Research Programs
1983 survey of utility end-use projects. Final report, 9:31108 (R;US)

SOLAR WIND
Acceleration
Suprathermal ions upstream of the earth's bow shock, 9:31870 (R;US)

SOLID ELECTROLYTES
Corrosion
Electrode-induced beta battery degradation. Final report, 9:30980 (R;US)
Uses
Solid electrolyte oxygen sensor for aircraft hazard protection applications. Final report, 26 Jan-26 Nov 76, 9:31614 (R;US)
SOLID FUELS
See also MIXED OXIDE FUELS
Hydrogenation
Experiments on the extraction of fuels in aqueous suspension at under to over critical conditions, 9:30147 (R;DE;In German)
SOLID WASTES
See also WOOD WASTES
Chemical Composition
Study about the behaviour of inorganic and organic pollutants in aerobic and anaerobic model landfills, 9:31688 (BA;US)
Combustion Products
Air pollution control: an advanced state of the art technology, 9:30491 (BA;US)
Leachates
Laboratory extraction method to simulate co-disposal of solid wastes in municipal waste landfills, 9:31684 (R;US)
SOLIDS
Dynamics
DYNA3D user's manual (nonlinear dynamic analysis of solids in three dimensions), 9:32421 (R;US)
Perturbed Angular Correlation
Perturbed angular correlation attenuation factor for relaxing systems, 9:31252 (RA;BR)
Physical Radiation Effects
Influence of atom-atom collision cascade on the diffusion processes, 9:32244 (RA;SU;In Russian)
Reduction
Surface oxygen chemical potential in a gas-solid reaction, 9:30983 (J;US)
SOLITONS
Nuclear Potential
Inverse mean field method and solitons in nuclear physics, 9:32190 (RA;HU)
SOLVATED ELECTRONS
Chemical Reaction Kinetics
Electron reactions with thiosulphate ions at various ionic strengths, 9:31336 (R;CA)
SOLVENT EXTRACTION
Automation
Automation of laboratory extraction installation intended for investigations in the field of reprocessing of spent fuels, 9:30295 (RA;XM;In Russian)
On-Line Control Systems
Automation of laboratory extraction installation intended for investigations in the field of reprocessing of spent fuels, 9:30295 (RA;XM;In Russian)
SOLVENT-REFINED COAL
Calorific Value
SRC-I solid product characterization. Final technical report, 9:30122 (R;US)
Chemical Analysis
Interim report on the genetic and animal toxicity testing of SRC-I products, intermediates, and waste materials. Appendix C. Chemical evaluation of SRC samples for genetic toxicity testing - basic program reports, 9:30127 (R;US)
SRC-I solid product characterization. Final technical report, 9:30122 (R;US)
Chemical Bonds
Quantitation of the reductive cleavage of aryl ethers of SRC and coals. Final report, September 1980-March 1984 , 9:31319 (R;US)
Chemical Preparation
Interim report on the genetic and animal toxicity testing of SRC-I products, intermediates, and waste materials. Appendix C. Chemical evaluation of SRC samples for genetic toxicity testing - basic program reports, 9:30127 (R;US)
Melting Points
SRC-I solid product characterization. Final technical report, 9:30122 (R;US)
Mutagen Screening
Interim report on the genetic and animal toxicity testing of SRC-I products, intermediates, and waste materials. Appendix A. Volume 1. Microbial mutagenicity evaluations (Ames Test) basic program reports, 9:30124 (R;US)
Interim report on the genetic and animal toxicity testing of SRC-I products, intermediates, and waste materials. Appendix F. QC/QA monitoring reports, 9:30130 (R;US)
Sampling
Interim report on the genetic and animal toxicity testing of SRC-I products, intermediates, and waste materials. Appendix G. Sample history and documentation, 9:30131 (R;US)
Solvent Extraction
Interim report on the genetic and animal toxicity testing of SRC-I products, intermediates, and waste materials. Appendix A. Volume 1. Microbial mutagenicity evaluations (Ames Test) basic program reports, 9:30124 (R;US)
Interim report on the genetic and animal toxicity testing of SRC-I products, intermediates, and waste materials. Appendix B. Volume 1. In vivo cytogenetics and in vitro mammalian mutagenicity (mouse lymphoma test) basic program, 9:30126 (R;US)
Toxicity
Interim report on the genetic and animal toxicity testing of SRC-I products, intermediates, and waste materials. Appendix D. Acute animal studies reports, 9:30128 (R;US)
Viscosity
SRC-I solid product characterization. Final technical report, 9:30122 (R;US)

Zero-quantum superconducting magnetic shield, 9:31392 (R;US)

SRC PROCESS

Coal Liquids

Interim report on the genetic and animal toxicity testing of SRC-I products, intermediates, and waste materials. Appendix B. Volume 1. In vivo cytogenetics and in vitro mammalian mutagenicity (mouse lymphoma test) basic program, 9:30126 (R;US)

Interim report on the genetic and animal toxicity testing of SRC-I products, intermediates, and waste materials. Appendix F. QC/QA monitoring reports, 9:30130 (R;US)

Condensates

Interim report on the genetic and animal toxicity testing of SRC-I products, intermediates, and waste materials. Appendix A, Volume 3. Microbial mutagenicity evaluations (Ames Test) Option IB reports, 9:30125 (R;US)

Demonstration Plants

Effect of feed gas trace components on the SRC-I hydrogen purification unit. Final technical report, 9:30133 (R;US)

Distillates

Interim report on the genetic and animal toxicity testing of SRC-I products, intermediates, and waste materials. Appendix C. Chemical evaluation of SRC samples for genetic toxicity testing - basic program reports, 9:30127 (R;US)

Interim report on the genetic and animal toxicity testing of SRC-I products, intermediates, and waste materials, 9:30123 (R;US)

Interim report on the genetic and animal toxicity testing of SRC-I products, intermediates, and waste materials. Appendix A. Volume 1. Microbial mutagenicity evaluations (Ames Test) basic program reports, 9:30124 (R;US)

Interim report on the genetic and animal toxicity testing of SRC-I products, intermediates, and waste materials. Appendix D. Acute animal studies reports, 9:30128 (R;US)

Interim report on the genetic and animal toxicity testing of SRC-I products, intermediates, and waste materials. Appendix E. Subchronic dermal studies reports, 9:30129 (R;US)

Interim report on the genetic and animal toxicity testing of SRC-I products, intermediates, and waste materials. Appendix G. Sample history and documentation, 9:30131 (R;US)

Fly Ash

Interim report on the genetic and animal toxicity testing of SRC-I products, intermediates, and waste materials. Appendix A, Volume 3. Microbial mutagenicity evaluations (Ames Test) Option IB reports, 9:30125 (R;US)

Interim report on the genetic and animal toxicity testing of SRC-I products, intermediates, and waste materials. Appendix G. Sample history and documentation, 9:30131 (R;US)

Fuel Oils

Interim report on the genetic and animal toxicity testing of SRC-I products, intermediates, and waste materials. Appendix A, Volume 3. Microbial mutagenicity evaluations (Ames Test) Option IB reports, 9:30125 (R;US)

Interim report on the genetic and animal toxicity testing of SRC-I products, intermediates, and waste materials. Appendix D. Acute animal studies reports, 9:30128 (R;US)

Naphtha

Interim report on the genetic and animal toxicity testing of SRC-I products, intermediates, and waste materials. Appendix D. Acute animal studies reports, 9:30128 (R;US)

Interim report on the genetic and animal toxicity testing of SRC-I products, intermediates, and waste materials. Appendix G. Sample history and documentation, 9:30131 (R;US)

Residues

Interim report on the genetic and animal toxicity testing of SRC-I products, intermediates, and waste materials. Appendix C. Chemical evaluation of SRC samples for genetic toxicity testing - basic program reports, 9:30127 (R;US)

Interim report on the genetic and animal toxicity testing of SRC-I products, intermediates, and waste materials. Appendix D. Acute animal studies reports, 9:30128 (R;US)

Interim report on the genetic and animal toxicity testing of SRC-I products, intermediates, and waste materials. Appendix G. Sample history and documentation, 9:30131 (R;US)

Slags

Interim report on the genetic and animal toxicity testing of SRC-I products, intermediates, and waste materials. Appendix A, Volume 3. Microbial mutagenicity evaluations (Ames Test) Option IB reports, 9:30125 (R;US)

Interim report on the genetic and animal toxicity testing of SRC-I products, intermediates, and waste materials. Appendix G. Sample history and documentation, 9:30131 (R;US)

Solvent-Refined Coal

Interim report on the genetic and animal toxicity testing of SRC-I products, intermediates, and waste materials. Appendix C. Chemical evaluation of SRC samples for genetic toxicity testing - basic program reports, 9:30127 (R;US)

Interim report on the genetic and animal toxicity testing of SRC-I products, intermediates, and waste materials. Appendix A. Volume 1. Microbial mutagenicity evaluations (Ames Test) basic program reports, 9:30124 (R;US)

Interim report on the genetic and animal toxicity testing of SRC-I products, intermediates, and waste materials. Appendix B. Volume 1. In vivo cytogenetics and in vitro mammalian mutagenicity (mouse lymphoma test) basic program, 9:30126 (R;US)

Interim report on the genetic and animal toxicity testing of SRC-I products, intermediates, and waste materials. Appendix D. Acute animal studies reports, 9:30128 (R;US)

Interim report on the genetic and animal toxicity testing of SRC-I products, intermediates, and waste materials. Appendix F. QC/QA monitoring reports, 9:30130 (R;US)

Interim report on the genetic and animal toxicity testing of SRC-I products, intermediates, and waste materials. Appendix G. Sample history and documentation, 9:30131 (R;US)

Waste Water

Interim report on the genetic and animal toxicity testing of SRC-I products, intermediates, and waste materials. Appendix A, Volume 3. Microbial mutagenicity evaluations (Ames Test) Option IB reports, 9:30125 (R;US)

Interim report on the genetic and animal toxicity testing of SRC-I products, intermediates, and waste materials. Appendix G. Sample history and documentation, 9:30131 (R;US)

Laboratory tests of phenol removal and ammonia and hydrogen sulfide stripping from SRC-I wastewater. Final technical report, 9:30132 (R;US)

SRC-II PROCESS
Environmental Impacts
Assessment of hydrocarbon and particulate emissions control and wastewater treatment technology for the solvent refined coal-II process. Volume I. Executive summary, 9:30180 (R;US)
Assessment of hydrocarbon and particulate emissions control and wastewater treatment technology for the Solvent Refined Coal-II process. Volume II. Technical report, 9:30181 (R;US)
Gaseous Wastes
Assessment of hydrocarbon and particulate emissions control and wastewater treatment technology for the solvent refined coal-II process. Volume I. Executive summary, 9:30180 (R;US)
Assessment of hydrocarbon and particulate emissions control and wastewater treatment technology for the Solvent Refined Coal-II process. Volume II. Technical report, 9:30181 (R;US)
Health Hazards
Assessment of hydrocarbon and particulate emissions control and wastewater treatment technology for the solvent refined coal-II process. Volume I. Executive summary, 9:30180 (R;US)
Assessment of hydrocarbon and particulate emissions control and wastewater treatment technology for the Solvent Refined Coal-II process. Volume II. Technical report, 9:30181 (R;US)
Waste Water
Assessment of hydrocarbon and particulate emissions control and wastewater treatment technology for the solvent refined coal-II process. Volume I. Executive summary, 9:30180 (R;US)
Assessment of hydrocarbon and particulate emissions control and wastewater treatment technology for the Solvent Refined Coal-II process. Volume II. Technical report, 9:30181 (R;US)
SR-OB REACTOR
See SUBCRITICAL ASSEMBLIES
STAINLESS STEEL-21-6-9
Helium 3 Reactions
Ion-beam profiling of ^3He in tritium-exposed type 304L and type 21-6-9 stainless steels, 9:31215 (J;US)
Ion Spectroscopy
Ion-beam profiling of ^3He in tritium-exposed type 304L and type 21-6-9 stainless steels, 9:31215 (J;US)
Physical Radiation Effects
Ion-beam profiling of ^3He in tritium-exposed type 304L and type 21-6-9 stainless steels, 9:31215 (J;US)
STAINLESS STEEL-304
Corrosion
Corrosion in atmospheric fluidized bed combustors--the reactions of $CaSO_4$ with Cr, Ni, Co, Fe, and several alloys, 9:31214 (J;US)
Materials Testing
Effects of magnetic fields on martensite transformations and mechanical properties of steels at low temperatures, 9:31216 (BA;US)
Mechanical Properties
Effects of magnetic fields on martensite transformations and mechanical properties of steels at low temperatures, 9:31216 (BA;US)
Oxidation
Corrosion in atmospheric fluidized bed combustors--the reactions of $CaSO_4$ with Cr, Ni, Co, Fe, and several alloys, 9:31214 (J;US)
Phase Transformations
Effects of magnetic fields on martensite transformations and mechanical properties of steels at low temperatures, 9:31216 (BA;US)
Stress Corrosion
Effects of variations in BWR water chemistry on the electrochemical potential of stainless steel and other metals, 9:30701 (R;US)
Sulfidation
Corrosion in atmospheric fluidized bed combustors--the reactions of $CaSO_4$ with Cr, Ni, Co, Fe, and several alloys, 9:31214 (J;US)
STAINLESS STEEL-304L
Helium 3 Reactions
Ion-beam profiling of ^3He in tritium-exposed type 304L and type 21-6-9 stainless steels, 9:31215 (J;US)
Ion Spectroscopy
Ion-beam profiling of ^3He in tritium-exposed type 304L and type 21-6-9 stainless steels, 9:31215 (J;US)
Physical Radiation Effects
Ion-beam profiling of ^3He in tritium-exposed type 304L and type 21-6-9 stainless steels, 9:31215 (J;US)
STAINLESS STEEL-316
Benchmarks
Materials development for fast breeder reactor cores, 9:30773 (J;US)
Certification
Materials development for fast breeder reactor cores, 9:30773 (J;US)
Crevice Corrosion
The attack of stainless steel by molten aluminum in a solar concentrator, 9:30573 (J;US)
Physical Radiation Effects
Evolution of cavity microstructure in ion-irradiated 316 SS and Fe-20Ni-15Cr alloy, 9:31144 (R;US)
Stress Corrosion
Effects of variations in BWR water chemistry on the electrochemical potential of stainless steel and other metals, 9:30701 (R;US)
STAINLESS STEELS

STAINLESS STEEL-304L
STAINLESS STEEL-316
Capture
Measurements of structural material capture to uranium-235 fission rate ratios in an intermediate spectrum assembly, 9:30785 (J;US)
Carburization
Corrosion problems and materials requirement,s for molten carbonate fuel cells, 9:31048 (J;US)
Casting
The effect of delta-ferrite upon the low temperature mechanical properties of centrifugally cast stainless steels, 9:31217 (BA;US)
The mechanical properties of stainless steel castings at 4 K, 9:31218 (BA;US)
Corrosion
A mechanism of radioactive corrosion product buildup on the stainless steel surface used in the primary cooling systems of boiling water reactors, 9:30705 (J;US)
Corrosion Products
A mechanism of radioactive corrosion product buildup on the stainless steel surface used in the primary cooling systems of boiling water reactors, 9:30705 (J;US)
Decontamination
Electrochemical decontamination of Pu contaminated stainless steel, 9:31338 (R;GB)
Electroslag Casting
Steel castings by the electroslag casting technique (CF8M), 9:31145 (R;US)
Ion Implantation
Rutherford backscattering, nuclear reaction and channeling studies of nitrogen implanted single-crystal stainless steel, 9:31895 (RA;AT)
Materials Testing
Corrosion resistant materials for coal liquefaction systems, 9:30099 (R;US)
The mechanical properties of stainless steel castings at 4 K, 9:31218 (BA;US)
Mechanical Properties
The effect of delta-ferrite upon the low temperature mechanical properties of centrifugally cast stainless steels, 9:31217 (BA;US)

The mechanical properties of stainless steel castings at 4 K, 9:31218 (BA;US)
Neutron Reactions
Measurements of structural material capture to uranium-235 fission rate ratios in an intermediate spectrum assembly, 9:30785 (J;US)
Oxidation
Corrosion problems and materials requirement,s for molten carbonate fuel cells, 9:31048 (J;US)
Scaling
A mechanism of radioactive corrosion product buildup on the stainless steel surface used in the primary cooling systems of boiling water reactors, 9:30705 (J;US)
STANDARDS
Decision Making
Decision framework for ambient air quality standards. Volume 1. Methodology and model structure. Final report, 9:30998 (R;US)
Public Opinion

Energy Conservation
Synthetic fuel production using Texas lignite and a very high temperature reactor for process heat, 9:30748 (J;US)
Energy Substitution Equivalent
Synthetic fuel production using Texas lignite and a very high temperature reactor for process heat, 9:30748 (J;US)
STEAM GENERATORS
Acoustic Emission Testing
Theoretical analysis of hydrogen concentration distribution and acoustic field in Na-water steam generator in presence of micro-leak, 9:30767 (R;HU)
Corrosion Denting
Causes of denting. Volume 3. Plant chemistry correlations. Final report, 9:30716 (R;US)
Corrosion Products
Investigation of steam generator corrosion products under typical PWR operating conditions. Final report, 9:30715 (R;US)
Decontamination
Steam generator decontamination, 9:30842 (RA;US)
Deposits
Centerwall deposition patterns in a large supercritical steam generator, 9:30643 (RA;US)
Particulate transport theory: relationship to sample system design, 9:30694 (RA;US)
Eddy Current Testing
Eddy-current inspection for steam generator tubing program. Annual progress report for period ending December 31, 1983. Vol. 4, 9:31423 (R;US)
Heat Transfer
Experimental data report on condensation in a single inverted U-tube (PWR), 9:30871 (R;US)
Hydraulics
Experimental data report on condensation in a single inverted U-tube (PWR), 9:30871 (R;US)
Leak Testing
Theoretical analysis of hydrogen concentration distribution and acoustic field in Na-water steam generator in presence of micro-leak, 9:30767 (R;HU)
Test Facilities
Experimental data report on condensation in a single inverted U-tube (PWR), 9:30871 (R;US)
Water Chemistry
Investigation of steam generator corrosion products under typical PWR operating conditions. Final report, 9:30715 (R;US)
Particulate transport theory: relationship to sample system design, 9:30694 (RA;US)
Steam generator needs and practices: uses of data, 9:30722 (RA;US)
STEAM SEPARATORS
Research Programs
Steam separators development: experimental programs from screening to actual environment tests, 9:30903 (RA;US)
STEAM SUPERHEATERS
See SUPERHEATERS
STEAM SYSTEMS
Availability
The effect of plant reliability improvement in the cost of generating electricity, 9:30791 (J;US)
Corrosion Products
Corrosion product sampling experience at Babcock & Wilson, 9:30724 (RA;US)
Proceedings: workshop on corrosion product sampling from hot water systems, 9:30693 (R;US)
Sampling for corrosion products in high pressure fossil-fuel boilers: a literature survey, 9:30690 (RA;US)
Sampling of corrosion products in Baltimore Gas and Electric Company fossil stations, 9:30647 (RA;US)
Optimization
The effect of plant reliability improvement in the cost of generating electricity, 9:30791 (J;US)
Pipes
Damping test results for straight sections of 3-inch and 8-inch unpressurized pipes (PWR; BWR), 9:30941 (R;US)
Reliability
The effect of plant reliability improvement in the cost of generating electricity, 9:30791 (J;US)

Samplers
Corrosion product sampling from hot water systems, 9:30723 (RA;US)
Corrosion product sampling experience at Babcock & Wilson, 9:30724 (RA;US)
Sampling water by membrane filtration for suspended solids in steam generating systems, 9:30689 (RA;US)
Sampling
Proceedings: workshop on corrosion product sampling from hot water systems, 9:30693 (R;US)
Sampling for corrosion products in high pressure fossil-fuel boilers: a literature survey, 9:30690 (RA;US)
Sampling of corrosion products in Baltimore Gas and Electric Company fossil stations, 9:30647 (RA;US)
Water Chemistry
Corrosion product sampling from hot water systems, 9:30723 (RA;US)
Sampling water by membrane filtration for suspended solids in steam generating systems, 9:30689 (RA;US)

STEAM TURBINES
Corrosion
Babcock and Wilcox integrated water chemistry monitoring and control system, 9:30644 (RA;US)
Role of chemical additives in transporting and depositing corrosive impurities in steam. Final report, 9:30648 (R;US)
Heat Transfer
Augmented heat transfer rates in utility condensers. Final report, 9:31416 (R;US)
Steam Condensers
Augmented heat transfer rates in utility condensers. Final report, 9:31416 (R;US)

STEEL INDUSTRY

Precipitation Scavenging
Overview of the oxidation and scavenging characteristics of April rains (OSCAR) experiment, 9:31661 (R;US)

STOVER
See AGRICULTURAL WASTES

STRAND BREAKS
Radiation Quality
Production of DNA strand breaks by ionizing radiation of different quality and their consequences for cell inactivation, 9:31732 (R;DE;In German)

STRANGE PARTICLES
See also B MESONS
KAONS
Particle Production
Strange particle production in the heavy-ion collision and the chemical equilibrium, 9:32215 (RA;HU)

STRATEGIC PETROLEUM RESERVE
Strategic Petroleum Reserve. Quarterly report, 9:30252 (R;US)
Program Management
Status of Strategic Petroleum Reserve activities as of December 31, 1983, 9:30225 (R;US)

STRATOSPHERE
Sulfuric Acid
Negative acid cluster ion hydration studies of atmospheric interest, 9:31869 (RA;AT)

STRAW
Acid Hydrolysis
Hydrolysis of agricultural wastes, 9:30487 (BA;US)
STRAY RADIATION
Risk Assessment
Annual report of the Division of Risk Assessment (formerly Division of Biological Effects) National Center for Devices and Radiological Health, fiscal year 1982, October 1, 1981-September 30, 1982, 9:31819 (R;US)
STREAK PHOTOGRAPHY
Photocathodes
X-ray transmission photocathode sensitivies at $\lambda = 0.266$ μm, 9:31633 (J;US)
STREAMER SPARK CHAMBERS
High-Voltage Pulse Generators
Equivalent rectangular pulse of high voltage power supplies for a streamer chamber, 9:31553 (R;SU;In Russian)
Results of analysis of circuits for pulse shapers charging in the power supply system of streamer spark chambers, 9:31552 (R;XJ;In Russian)
Mathematical Models
Energy model of increasing radiation and the size of an electron avalanche in a streamer chamber, 9:31554 (R;XJ;In Russian)
Power Supplies
Equivalent rectangular pulse of high voltage power supplies for a streamer chamber, 9:31553 (R;SU;In Russian)
STREAMS
Acidification
Analysis of survey data on the chemistry of twenty-three streams in the Chesapeake Bay watershed: some implications of the impact of acid deposition. Final report, 9:31712 (R;US)
Baseline Ecology
Habitat structure and fish communities of warmwater streams, 9:31703 (R;US)
STREETS
See ROADS
STRESS ANALYSIS
Effect of finite rotation on a problem in plastic deformation, 9:31394 (R;US)
STRONTIUM
Adsorption
Evaluation of zeolite mixtures for decontaminating high-activity-level water at the Three Mile Island Unit 2 Nuclear Power Station, 9:30833 (R;US)
Dissolution
Basalt as a potential waste package backfill component in a repository located within the Columbia River basalt, 9:30366 (J;US)
Leaching
Comparative leaching behavior of SYNROC B and a borosilicate glass, 9:30376 (J;US)
Continuous-flow leaching studies of crushed and cored SYNROC, 9:30372 (J;US)
STRONTIUM 90
Body Burden
Protracted exposure to fallout: the Rongelap and Utirik experience, 9:31793 (J;GB)
Radioecological Concentration
Environmental radiation data report 34, April-June 1983, 9:31691 (R;US)
Report on intercomparison A-14 of the determination of some mineral components and radionuclides in milk powder, 9:31690 (R;AT)
STRONTIUM FLUORIDES
Ion Implantation
Ion implantation damage in alkaline-earth fluorides, 9:31266 (R;US)
STRONTIUM ISOTOPES
See also STRONTIUM 90
Leaching
Leaching properties and chemical composition of calcines produced at the Idaho Chemical Processing Plant, 9:30375 (J;US)
STRONTIUM TITANATES
Dissolution
Dissolution of aluminum-, titanium-, and zirconium-based crystalline waste form components under hydrothermal conditions, 9:30382 (J;US)
Photochemical Reactions
Catalyzed photodissociation of water, 9:30438 (R;US)
STRUCTURES (BUILDINGS)
See BUILDINGS
STUDS
See FASTENERS
STYRENE
Standards
Criteria for a recommended standard: occupational exposure to styrene, 9:31681 (R;US)
SU GROUPS
Irreducible Representations
Factoriality of representations of the group of paths on SU(n), 9:32052 (R;DE)
SUBCRITICAL ASSEMBLIES
Neutron Spectroscopy
Heterogeneous effects and influence of an output channel during neutron spectra measurement by the time-of-flight method, 9:32239 (R;SU;In Russian)
SUBCRITICAL FLOW
See LAMINAR FLOW
SUBMARINE CANYONS
Geology
Geologic observations at the 2800-meter radioactive waste disposal site and associated deepwater dumpsite 106 (DWD-106) in the Atlantic Ocean. (Revised). Final report, 9:31858 (R;US)
SUBURBS
See URBAN AREAS
SUGAR INDUSTRY
Energy Consumption
Energy use reduction potential in the beet sugar industry, 9:31088 (R;US)
SULFATES
See also CALCIUM SULFATES
Atmospheric Chemistry
SO_2 (G) to sulfate conversion rate in an oil-fired power plant plume in a fog bank, 9:31670 (J;US)
Biological Effects
Effect of the sulfate-to-nitrate ratio on the response of radish to simulated rain acidity, 9:31799 (RA;US)
Quantity Ratio
Effect of the sulfate-to-nitrate ratio on the response of radish to simulated rain acidity, 9:31799 (RA;US)
SULFUR
Material Balance
Elemental partitioning in ash depositories and material balances for a coal burning facility by spark source mass spectrometry, 9:30167 (J;US)
Measuring Methods
Methods for sulfur in coal. Revision 1, 9:30164 (R;US)
Quantitative Chemical Analysis
Methods for sulfur in coal. Revision 1, 9:30164 (R;US)
SULFUR 32 TARGET
Neutron Reactions
Examination of the resonance structure of $^{32}S + N$ by measurement of the total cross section and the elastic neutron scattering, 9:32097 (R;DE ;In German)
SULFUR DIOXIDE
Adsorption
Sampling of stack gas for sulfur dioxide with a molecular sieve adsorbent, 9:31671 (J;US)
Air Pollution Control
Regional, new source bubble policy: its advantages illustrated for the State of Illinois, 9:31668 (J;US)
Atmospheric Chemistry
SO_2 (G) to sulfate conversion rate in an oil-fired power plant plume in a fog bank, 9:31670 (J;US)
Emission
Assessment of hydrocarbon and particulate emissions control and wastewater treatment technology for the solvent refined

coal-II process. Volume I. Executive summary, 9:30180 (R;US)
Assessment of hydrocarbon and particulate emissions control and wastewater treatment technology for the Solvent Refined Coal-II process. Volume II. Technical report, 9:30181 (R;US)
Pollution Regulations
Regional, new source bubble policy: its advantages illustrated for the State of Illinois, 9:31668 (J;US)
Scrubbing
Investigations on the wet collection of sulphur dioxide, 9:30175 (R;DE;In German)
Sorption
Evaluation of the NOXSO combined NO/sub x//SO_2 flue gas treatment process: process chemistry, reaction kinetics, sorbent performance, process design and cost analysis. Final report, 9:30171 (R;US)
Thermochemical Processes
Modification of the sulfur dioxide-iodine thermochemical hydrogen cycle with lanthanum sulfites and sulfates, 9:30435 (R;US)
SULFUR FLUORIDES
Atom-Molecule Collisions
Temperature dependence of the de-excitation rate constants of excited rare gas atoms by atoms and molecules, 9:31949 (RA;AT)
Electric Discharges
Negative ion formation in SF_6 spark by-products, 9:31237 (R;US)
Electron Attachment
Electron attachment coefficients determined using a flowing afterglow/langmuir probe (FALP) apparatus, 9:31919 (RA;GB)
Electron Drift
Calculation of electron swarm parameters in electro-negative gases - SF_6, H_2O and F_2 -, 9:31911 (RA;JP)
SULFUR HYDRIDES
See HYDROGEN SULFIDES
SULFUR IONS
Ion-Molecule Collisions
Ionisation of Rydberg ions, 9:31880 (RA;DE;In German)
Production of excited projectile states by electron capture in fast ion-atom collisions, 9:31879 (RA;DE;In German)
SULFUR SULFIDES
See SULFUR
SULFURIC ACID
Hydration
Negative acid cluster ion hydration studies of atmospheric interest, 9:31869 (RA;AT)
SUPER HIGH FREQUENCY RADIATION
See RADIOWAVE RADIATION
SUPERCONDUCTING CABLES
Bushings
Capacitance-graded cryogenic high voltage bushing for vertical or horizontal mounting, 9:31523 (J;GB)
SUPERCONDUCTING CAVITY RESONATORS
Performance
High-gradient, pulsed operation of superconducting niobium cavities, 9:31478 (R;US)
SUPERCONDUCTING MAGNETIC ENERGY STORAGE
Performance
30 MJ superconducting magnetic energy storage performance on the Bonneville Power Administration utility transmission system, 9:30970 (R;US)
SUPERCONDUCTING MAGNETS
Effects of magnetic fields on martensite transformations and mechanical properties of steels at low temperatures, 9:31216 (BA;US)
Design
High field Nb_3Sn Axicell insert coils for the Mirror Fusion Test Facility-B (MFTF-B) axicell configuration. Final report, 9:32367 (R;US)
Electrical Properties
Commissioning tests of the Bonneville Power Administration 30 MJ superconducting magnetic energy storage unit, 9:30649 (R;US)
Inhomogeneous Fields
Field inhomogeneity measurements at pulsed heating of the winding of a superconducting magnet, 9:31494 (R;XJ;In Russian)
Performance Testing
Commissioning tests of the Bonneville Power Administration 30 MJ superconducting magnetic energy storage unit, 9:30649 (R;US)
High field Nb_3Sn Axicell insert coils for the Mirror Fusion Test Facility-B (MFTF-B) axicell configuration. Final report, 9:32367 (R;US)
Power Supplies
Alternative power supply and dump resistor connections for similar, mutally coupled, superconducting coils, 9:32368 (R;US)
Quenching
Switching transients in a superconducting coil, 9:32369 (R;US)
Switches
Switching transients in a superconducting coil, 9:32369 (R;US)
SUPERCONDUCTING QUANTUM INTERFERENCE DEVI
See SQUID DEVICES
SUPERCONDUCTING SUPER COLLIDER
Electron-Proton Interactions
Ep option at the SSC, 9:32001 (R;US)
Experiment Planning
Ep option at the SSC, 9:32001 (R;US)
Need to plan for a full-scale lns-physics program at the SSC, 9:31979 (R;US)
SUPERCONDUCTING WIRES
AC Losses
Magnetic impurity scattering in in situ superconductors, 9:31391 (R;US)
Design
Multiwire conductor having greatly increased interwire resistance and method for making same, 9:31404 (P;US)
Fabrication
Multiwire conductor having greatly increased interwire resistance and method for making same, 9:31404 (P;US)
Impurities
Magnetic impurity scattering in in situ superconductors, 9:31391 (R;US)
Superconductivity
Multiwire conductor having greatly increased interwire resistance and method for making same, 9:31404 (P;US)
SUPERCONDUCTORS
Electric Conductivity
Electronic transport in amorphous superconductors, 9:31171 (RA;BR)
Magnetic Shielding
Zero-quantum superconducting magnetic shield, 9:31392 (R;US)
SUPERCRITICAL FLOW
See TURBULENT FLOW
SUPERCRITICAL GAS EXTRACTION
Supercritical solvent extraction, 9:30115 (R;US)
Organic Solvents
Enhanced coal liquefaction with ammonia and amines in single and binary solvent systems. Quarterly report, September 20-December 19, 1983, 9:30137 (R;US)
SUPERGRAVITY
Analytical Solution
Identification of trivial solutions in supergravity, 9:32287 (R;AT)
Spinors
Non-gauge spin-3/2 fields from supercovariantly constant spinors, 9:32291 (R;AT)
SUPERHEATERS
Creep
Creep damage and remaining life of superheater and reheater tubes: A useful approach, 9:30627 (RA;US)
Service Life
Creep damage and remaining life of superheater and reheater tubes: A useful approach, 9:30627 (RA;US)

SUPERIOR PROCESS
Evaluation
Conceptual process designs: Lurgi-Ruhrgas and superior circular grate, 9:30269 (R;US)
SUPERSYMMETRY
Gauge Invariance
Finiteness conditions and gauge-symmetry breakdown in N = 2 supersymmetric models, 9:32043 (J;US)
Postulated Particles
New particle searches at PEP, 9:31999 (R;US)
Symmetry Breaking
Finiteness conditions and gauge-symmetry breakdown in N = 2 supersymmetric models, 9:32043 (J;US)
SUPERVOLTAGE RADIOTHERAPY
See RADIOTHERAPY
SUPPORTS
See also FUEL RACKS
POWERED SUPPORTS
Design
Driving of a stone drift using the 'New Austrian Tunnelling Method' at Nordstern colliery, 9:31461 (R;DE;In German)
SURFACE BARRIER DETECTORS
Design
Multidetector alpha spectroscopy analysis system, 9:31571 (J;GB)
Performance
Multidetector alpha spectroscopy analysis system, 9:31571 (J;GB)
SURFACE COATING
Technology Assessment
Surface modification and coatings: a technical assessment, 9:31148 (R;US)
SURFACE MINING
Cost
Coal Mining Cost Model (MOD-3), 9:30200 (R;US)
Environmental Impacts
Hydrology of Area 6, Eastern Coal Province, Maryland, West Virginia, and Pennsylvania, 9:30190 (R;US)
Procedures for assessment of cumulative impacts of surface mining on the hydrologic balance, 9:30212 (R;US)
Land Reclamation
Resource recovery of municipal wastewater sludge, 9:30184 (BA;US)
SURFACE PROPERTIES
Qualitative Chemical Analysis
Surface-enhanced Raman scattering on silver-coated teflon sphere substrates, 9:31304 (J;NL)
SURFACE TREATMENTS
Technology Assessment
Surface modification and coatings: a technical assessment, 9:31148 (R;US)
SURFACES
Interactions of molecules with surfaces. Progress report, February 1, 1983-January 31, 1984, 9:31248 (R;US)
Adsorption
Adsorbate migration on macroscopic surfaces investigated by means of He beam scattering, 9:31899 (RA;AT)
Atom Collisions
Adsorbate migration on macroscopic surfaces investigated by means of He beam scattering, 9:31899 (RA;AT)
Crystal Structure
Studies of surfaces using optical second-harmonic generation, 9:31956 (R;US)
Data Analysis
Estimation of gradients from scattered data, 9:32432 (J;US)
Four-Dimensional Calculations
Multistage trivariate surfaces, 9:32430 (J;US)
Three- and four-dimensional surfaces, 9:32429 (J;US)
Gamma Radiation
Surface γ-rays, 9:32245 (RA;SU;In Russian)
Interpolation
Triangle-based C^1 interpolation method, 9:32431 (J;US)
Ion Collisions
Plasma-surface interaction data relevant to fusion and IAEA activities in this field, 9:31883 (RA;AT)
Modifications
Surface modification and coatings: a technical assessment, 9:31148 (R;US)
Optical Properties
Studies of surfaces using optical second-harmonic generation, 9:31956 (R;US)
Three-Dimensional Calculations
Three- and four-dimensional surfaces, 9:32429 (J;US)
SURVEILLANCE (RADIOACTIVITY)
See RADIATION MONITORING
SURVEY MONITORS
Performance
Two high range survey meters for measuring γ and β dose rates, 9:31528 (R;CA)
SURVEY (RADIOACTIVITY)
See RADIATION MONITORING
SUSPENSIONS (FUEL)
See FUEL SLURRIES
SUSQUEHANNA STEAM ELECTRIC STATION UNIT-1

SUSQUEHANNA-1 REACTOR
Reactor Licensing
Safety evaluation report related to the operation of Susquehanna Steam Electric Station, Units 1 and 2 (Docket Nos. 50-387 and 50-388). Suppl.6, 9:30883 (R;US)
Reactor Safety
Safety evaluation report related to the operation of Susquehanna Steam Electric Station, Units 1 and 2 (Docket Nos. 50-387 and 50-388). Suppl.6, 9:30883 (R;US)
SUSQUEHANNA-2 REACTOR
Reactor Licensing
Safety evaluation report related to the operation of Susquehanna Steam Electric Station, Units 1 and 2 (Docket Nos. 50-387 and 50-388). Suppl.6, 9:30883 (R;US)
Reactor Safety
Safety evaluation report related to the operation of Susquehanna Steam Electric Station, Units 1 and 2 (Docket Nos. 50-387 and 50-388). Suppl.6, 9:30883 (R;US)
SWEAT GLANDS
See SKIN
SWITCHES
Design
Beam deflecting optical switch using volumetric thermal gratings, 9:31632 (J;US)
Gratings
Beam deflecting optical switch using volumetric thermal gratings, 9:31632 (J;US)
Pulse Shapers
Distortion and pulse shaping of short electrical pulses from dispersion of microstrip lines, 9:31587 (J;US)
Signal Distortion
Distortion and pulse shaping of short electrical pulses from dispersion of microstrip lines, 9:31587 (J;US)
SWITCHING CIRCUITS
Evaluation of advanced static VAR generators. Final report, 9:30685 (R;US)
SWITZERLAND
Electric Power
President's address to the VSE general meeting, Geneva, August 22, 1980, 9:31018 (RA;CH;In German and French.)
Energy Consumption

FERMILAB ACCELERATOR
JINR SYNCHROTRON
LAMPF II SYNCHROTRON
SERPUKHOV SYNCHROTRON
Beam Bunching
Coalescence of bunches in a synchrotron to change acceleration harmonic number, 9:31501 (J;NL)
SYNCRUDE
See SYNTHETIC PETROLEUM
SYNROC
See SYNTHETIC ROCKS
SYNTHESIS GAS
Chemical Composition
Usefulness of a slurry-type Fischer-Tropsch reactor for processing synthesis gas of low hydrogen-carbon monoxide ratios, 9:30451 (RA;US)
Chemical Reactions
Development of a catalytic process for alcohol-based synthetic transportation fuel from coal-derived synthesis gases, 9:30100 (RA;US)
Economics
Usefulness of a slurry-type Fischer-Tropsch reactor for processing synthesis gas of low hydrogen-carbon monoxide ratios, 9:30451 (RA;US)
Production
Use of catalysts in biomass gasification, 9:30481 (J;US)
SYNTHETIC CRUDE OIL
See SYNTHETIC PETROLEUM
SYNTHETIC FUELS
See also SYNTHETIC PETROLEUM
Chemical Analysis
Thermal degradation of cellulose in alkali, 9:30478 (J;US)
Chemical Properties
Properties of fuels employed in a gas turbine combustor program. Technical note, 9:30441 (R;US)
Energy Source Development
Synthetic fuel development Potential socioeconomic impacts of single and multiple projects, 9:31028 (J;GB)
Health Hazards
Health implications of unconventional energy production and use, 9:30588 (J;US)
Physical Properties
Properties of fuels employed in a gas turbine combustor program. Technical note, 9:30441 (R;US)
Production
Economics of production of microalgae in high intensity mass culture, as a new source of fuel oils, 9:30480 (J;US)
Transportation fuels from wood, 9:30479 (J;US)
SYNTHETIC FUELS INDUSTRY
Cost Benefit Analysis
Economic feasibility of small-scale ethanol production in Texas, 9:30482 (R;US)
SYNTHETIC FUELS REFINERIES
Demonstration Plants
Synthetic fuel development Potential socioeconomic impacts of single and multiple projects, 9:31028 (J;GB)
Economic Impact
Synthetic fuel development Potential socioeconomic impacts of single and multiple projects, 9:31028 (J;GB)
Social Impact
Synthetic fuel development Potential socioeconomic impacts of single and multiple projects, 9:31028 (J;GB)
Socio-Economic Factors
Synthetic fuel development Potential socioeconomic impacts of single and multiple projects, 9:31028 (J;GB)
SYNTHETIC PETROLEUM
Production
Synthetic fuel production using Texas lignite and a very high temperature reactor for process heat, 9:30748 (J;US)
SYNTHETIC ROCKS
Comparative Evaluations
Comparative leaching behavior of SYNROC B and a borosilicate glass, 9:30376 (J;US)
Leaching
Comparative leaching behavior of SYNROC B and a borosilicate glass, 9:30376 (J;US)
Continuous-flow leaching studies of crushed and cored SYNROC, 9:30372 (J;US)
SYNTHINE PROCESS

Alfven Waves
Interaction of the precessional wave with free-boundary Alfven surface waves in tandem mirrors, 9:32310 (R;US)
High-Frequency Heating
Monte Carlo studies of tandem mirror plasmas interacting with waves in the Ion Cyclotron Range of Frequencies (ICRF). Progress report, October 1, 1982-May 18, 1984, 9:32304 (R;US)
Reactor Fueling
Monte Carlo studies of tandem mirror plasmas interacting with waves in the Ion Cyclotron Range of Frequencies (ICRF). Progress report, October 1, 1982-May 18, 1984, 9:32304 (R;US)
Stabilization
Interaction of the precessional wave with free-boundary Alfven surface waves in tandem mirrors, 9:32310 (R;US)
Start-Up
Monte Carlo studies of tandem mirror plasmas interacting with waves in the Ion Cyclotron Range of Frequencies (ICRF). Progress report, October 1, 1982-May 18, 1984, 9:32304 (R;US)
TANKS
Cleaning
Jet impact force studies, 9:30324 (R;US)
TANTALUM
Antiproton Reactions
A0 production from low energy antiproton annihilations in complex nuclei, 9:32094 (J;US)
Material Balance
Elemental partitioning in ash depositories and material balances for a coal burning facility by spark source mass spectrometry, 9:30167 (J;US)
TANTALUM 181
Energy Levels
Sup(181)W decay, 9:32133 (RA;SU;In Russian)
Isomeric Nuclei
Photoexcitation of 18-microsecond isomeric state in ^{181}Ta by bremsstrahlung of 3-4 MeV electrons, 9:32134 (RA;SU;In Russian)

Mass Spectra
Precise atomic masses and mass differences for Hf, Ta, W and Re, 9:31872 (R;CA)
TANTALUM 181 TARGET
Alpha Reactions
Multiplicity distributions of π^- mesons produced in light nuclei interaction with tantalum nuclei for momentum interval 2-5 GeV/c per nucleon, 9:32142 (R;XJ;In Russian)
Carbon 12 Reactions
Multiplicity distributions of π^- mesons produced in light nuclei interaction with tantalum nuclei for momentum interval 2-5 GeV/c per nucleon, 9:32142 (R;XJ;In Russian)
Deuteron Reactions
Multiplicity distributions of π^- mesons produced in light nuclei interaction with tantalum nuclei for momentum interval 2-5 GeV/c per nucleon, 9:32142 (R;XJ;In Russian)
Photonuclear Reactions
Photoexcitation of 18-microsecond isomeric state in ^{181}Ta by bremsstrahlung of 3-4 MeV electrons, 9:32134 (RA;SU;In Russian)
Proton Reactions
Properties of pC and pTa interactions at Psub(p)=10 GeV/c accompanied by the emission of cumulative protons and π mesons, 9:32088 (R;XJ;In Russian)
TANTALUM COMPOUNDS
Crystal-Phase Transformations
Neutron diffraction study on β_1-β_2 transformation in Ta_2D, 9:31222 (R;US)
Neutron Diffraction
Neutron diffraction study on β_1-β_2 transformation in Ta_2D, 9:31222 (R;US)
TAR SAND OIL
See BITUMENS
TAR SANDS

See MATERIALS TESTING
TETRAHYDRONAPHTHALENE
See TETRALIN
TETRALIN
Structural Chemical Analysis
Synthesis of indanes, tetralins and carotanes, and characterization of indanes and tetralins. Final report, May 1, 1982-April 30, 1984 (Alkylated tetralins and indanes), 9:30159 (R;US)
Synthesis
Synthesis of indanes, tetralins and carotanes, and characterization of indanes and tetralins. Final report, May 1, 1982-April 30, 1984 (Alkylated tetralins and indanes), 9:30159 (R;US)
TEXACO GASIFICATION PROCESS
Chemical Feedstocks
Type I evaluation of Exxon Donor Solvent (EDS) liquefaction process residue from Texas lignite as a feedstock for the Texaco Gasification Process, 9:30103 (R;US)
TEXAS
Coal Deposits
Future utilization of Texas lignites: a review. Mineral Resource Cicular No. 63, 9:30188 (R;US)
Synthetic fuel production using Texas lignite and a very high temperature reactor for process heat, 9:30748 (J;US)
Energy Policy
Future utilization of Texas lignites: a review. Mineral Resource Cicular No. 63, 9:30188 (R;US)
Energy Sources
Future utilization of Texas lignites: a review. Mineral Resource Cicular No. 63, 9:30188 (R;US)
Uranium Deposits
Catahoula formation of the Texas Coastal Plain: origin, geochemical evolution, and characteristics of uranium deposits, 9:30277 (R;US)

Epigenetic zonation and fluid flow history of uranium-bearing fluvial aquifer systems, south Texas uranium province. Report of Investigations No. 119, 9:30278 (R;US)
Geochemistry of ground water in the Miocene Oakville Sandstone: a major aquifer and uranium host of the Texas Coastal Plain, 9:31708 (R;US)

TEXTILE INDUSTRY
Air Pollution Control
Synthetic fiber production facilities: background information for promulgated standards, 9:31726 (R;US)
Environmental Impact Statements
Synthetic fiber production facilities: background information for promulgated standards, 9:31726 (R;US)
Waste Disposal
Biological sludge from synthetic fiber manufacturing plants as a soil amendment, 9:31102 (BA;US)

TFTR REACTORS
Operation
Initial confinement studies of ohmically heated plasmas in the tokamak fusion test reactor, 9:32331 (J;US)
Plasma Confinement
Initial confinement studies of ohmically heated plasmas in the tokamak fusion test reactor, 9:32331 (J;US)

THALLIUM
Material Balance
Elemental partitioning in ash depositories and material balances for a coal burning facility by spark source mass spectrometry, 9:30167 (J;US)

THALLIUM 205
Energy Levels
3291-keV J/sup π/ = $(25/2)^+$ level in ^{205}Tl, 9:32143 (J;US)

THALLIUM TELLURIDES
Crystal Field
Temperature dependence of the EFG in In in the compound Tl_6Te_3, 9:31151 (RA;BR)

THERMAL ANALYSIS
Holography
Holographic investigation of thermal nonequilibrium vapor generation, 9:31419 (R;US)

THERMAL BATTERIES
Battery Separators
Lithium oxide in Li(Si)/FeS2 thermal batteries, 9:30987 (J;US)
Performance
Lithium oxide in Li(Si)/FeS2 thermal batteries, 9:30987 (J;US)

THERMAL DECOMPOSITION
See PYROLYSIS

THERMAL DIFFUSION
Differential Equations
Quasi-invariance (rescaling) in nonlinear physics, 9:32295 (R;US)

THERMAL ENERGY STORAGE EQUIPMENT
Computer Codes
Computer simulation of the thermal storage systems in the solar 10 MWe pilot plant, 9:30532 (R;US)
Computerized Simulation
Computer simulation of the thermal storage systems in the solar 10 MWe pilot plant, 9:30532 (R;US)
Design
Design and experiment of high-temperature tubular heat accumulator using the latent fusion heat of "Zamak 3" alloy, 9:30973 (R;FR;In French)
Latent Heat Storage
Design and experiment of high-temperature tubular heat accumulator using the latent fusion heat of "Zamak 3" alloy, 9:30973 (R;FR;In French)

THERMAL INSULATION
Thermal Efficiency
The National Program for Building Thermal Envelope Systems and Insulating Materials (BTESIM), 9:31072 (BA;IE)

THERMAL NEUTRONS
Cross Sections
Transport of thermal neutrons in D_2O in the temperature Range 5 to 60°C based on a new scattering kernel, 9:30808 (J;US)
Diffusion
Transport of thermal neutrons in D_2O in the temperature Range 5 to 60°C based on a new scattering kernel, 9:30808 (J;US)
Neutron Transport
Transport of thermal neutrons in D_2O in the temperature Range 5 to 60°C based on a new scattering kernel, 9:30808 (J;US)
Scattering
Transport of thermal neutrons in D_2O in the temperature Range 5 to 60°C based on a new scattering kernel, 9:30808 (J;US)

Tritium-assisted fusion breeders, 9:32366 (R;US)
Polarization
Physical processes in spin polarized plasmas, 9:32363 (R;US)
THERMONUCLEAR POWER PLANTS
Commercialization
Generic magnetic fusion reactor cost assessment, 9:32340 (R;US)
Cost
Generic magnetic fusion reactor cost assessment, 9:32340 (R;US)
THERMONUCLEAR REACTOR MATERIALS
Creep
Evaluation of ferritic alloy Fe-2-1/4Cr-1Mo after neutron irradiation - irradiation creep and swelling, 9:31149 (R;US)
Physical Radiation Effects
Evaluation of ferritic alloy Fe-2-1/4Cr-1Mo after neutron irradiation - irradiation creep and swelling, 9:31149 (R;US)
Swelling
Evaluation of ferritic alloy Fe-2-1/4Cr-1Mo after neutron irradiation - irradiation creep and swelling, 9:31149 (R;US)
THERMONUCLEAR REACTOR WALLS
See also FIRST WALL
Erosion
Hydrogen effects in fusion reactor walls, 9:32383 (RA;US)
THERMONUCLEAR REACTORS
For use in cases where certain aspects of either hypothetical or real thermonuclear reactors are discussed.
See also LASER FUSION REACTORS
MAGNETIC MIRROR TYPE REACTORS
TOKAMAK TYPE REACTORS
Economics
Economic potential of inertial fusion, 9:32382 (R;US)
Fuel Cycle
Tritium-assisted fusion breeders, 9:32366 (R;US)
Meetings
Fusion technology research, 9:32298 (R;GB)
Reports of 2. All union conference on technological problems of thermonuclear reactors. Volume 2, 9:32357 (R;SU;RU)
THERMONUCLEAR WEAPONS
See NUCLEAR WEAPONS
THETA PINCH
Rayleigh-Taylor Instability
Studies of CO_2 laser interactions with plasmas. Final technical report, 1 January 1981-30 March 1983, 9:32348 (R;US)
THIO COMPOUNDS
See ORGANIC SULFUR COMPOUNDS
THIONINE
Biological Effects
Thiol depletion and enhanced melphalan toxicity by sensitizers and BSO, 9:31806 (RA;US)
THIOPHENE
Electrochemistry
Polymerization of 3-methyl-2,5-dibromothiophene utilizing n-butyllithium and copper(II) chloride. Technical report, 9:31241 (R;US)
Polymerization
Charge storage in doped poly(thiophene). Technical report, 9:30977 (R;US)
Polymerization of 3-methyl-2,5-dibromothiophene utilizing n-butyllithium and copper(II) chloride. Technical report, 9:31241 (R;US)
THIOSULFATES
Electron-Ion Collisions
Electron reactions with thiosulphate ions at various ionic strengths, 9:31336 (R;CA)
THOMAS-FERMI MODEL
Ionization
Thomas-Fermi-Von Weizsaecker and Hartree energies as functions of the degree of ionization, 9:31965 (R;AT)
THOMAS-FERMI-DIRAC MODEL
See THOMAS-FERMI MODEL
THORIUM
Electronic Structure
Recent applications of the relativistically parameterized extended Huckel method (REX) on actinide compounds, 9:31339 (RA;IL)
Neutron Reactions
Neutron interferrometric determination of the coherent scattering length of thorium, 9:32151 (RA;IL)
Potentiometry
Potentiometric investigation of uranyl(VI)- and thorium(IV)-glutathionate systems, 9:31285 (RA;IL)
Uranium 238 Reactions
Observation of a narrow line in the positron spectra from U + U and U + Th collisions, 9:32148 (RA;DE;In German)
THORIUM 222
High Spin States
High-spin consequences of octupole shape in nuclei around ^{223}Th, 9:32153 (J;US)
Nuclear Deformation
High-spin consequences of octupole shape in nuclei around ^{223}Th, 9:32153 (J;US)
Octupole shaps in nuclei, and some rotational consequences thereof, 9:32108 (R;US)
Nuclear Structure
Octupole shaps in nuclei, and some rotational consequences thereof, 9:32108 (R;US)
THORIUM 228
Radioecological Concentration
Behavior of plutonium and americium in two groundwater systems, 9:31718 (RA;US)
Flux of plutonium from sediments to water in Lake Michigan, 9:31715 (RA;US)
THORIUM 230
High Spin States
High-spin states in ^{230}Th, 9:32150 (RA;DE;In German)
THORIUM 232 TARGET
Uranium 238 Reactions
Observation of a narrow line in the positron spectra from U + U and U + Th collisions, 9:32148 (RA;DE;In German)
THORIUM ARSENIDES
Electric Conductivity
Transport properties of the p-type Th_3As_4, 9:31186 (RA;IL)
Hall Effect
Transport properties of the p-type Th_3As_4, 9:31186 (RA;IL)
Raman Effect
Infrared and Raman studies of phonons and electrons in Th_3P_4 and Th_3As_4, 9:31179 (RA;IL)
THORIUM BASE ALLOYS
Lattice Parameters
Diffusion couple studies in the U-Ga and Th-Ga systems, 9:31188 (RA;IL)
THORIUM COMPOUNDS
See also THORIUM ARSENIDES
THORIUM NITRATES
THORIUM OXIDES
THORIUM PHOSPHIDES
THORIUM SULFIDES
Chemical Analysis
Investigations of rare earth problems. Final report, 9:31275 (R;US)

Potentiometric investigation of uranyl(VI)- and thorium(IV)-glutathionate systems, 9:31285 (RA;IL)
Chemical Reactions
Reactivity of $M(NEt_2)_4$ towards cyclopentadiene. Synthesis, characterization and reactivity of some MCpsub(n)(NEt$_2$)sub(4-n) (M = U(IV)) and Th(IV), 9:31352 (RA;IL)
Structural Chemical Analysis
Reactivity of $M(NEt_2)_4$ towards cyclopentadiene. Synthesis, characterization and reactivity of some MCpsub(n)(NEt$_2$)sub(4-n) (M = U(IV)) and Th(IV), 9:31352 (RA;IL)
Structural chemistry of thorium compounds with coordination numbers 7, 8, 9 and 10, 9:31354 (RA;IL)
Synthesis
Reactivity of $M(NEt_2)_4$ towards cyclopentadiene. Synthesis, characterization and reactivity of some MCpsub(n)(NEt$_2$)sub(4-n) (M = U(IV)) and Th(IV), 9:31352 (RA;IL)

THORIUM D
See LEAD 208

THORIUM MINERALS
Mineralization
Behaviour of U, Th and other trace elements during evolution of the Guichon Creek Batholith, British Columbia, 9:31846 (RA;CA)
Petrochemistry
Behaviour of U, Th and other trace elements during evolution of the Guichon Creek Batholith, British Columbia, 9:31846 (RA;CA)
Uranium in alkaline intrusions, southeastern British Columbia, 9:31845 (RA;CA)
Petrology
Uranium in alkaline intrusions, southeastern British Columbia, 9:31845 (RA;CA)

THORIUM NITRATES
Diffusion
Transport processes of actinides in aqueous and nonaqueous solutions, 9:31353 (RA;IL)

THORIUM ORES
Geochemical Surveys
Geochemistry and the distribution of uranium and thorium in the granitoid rocks of the south mountain batholith, Nova Scotia. Some genetic and exploration implications, 9:30282 (RA;CA)

THORIUM OXIDES
See also ZIRCONOLITE
Electron Spin Resonance
EPR studies of U^{4+} doped ThO_2 single crystals, 9:31230 (RA;IL)
X-Ray Diffraction
High pressure x-ray diffraction study of actinide compounds. Thorium dioxide and thorium monosulfide, 9:31228 (RA;IL)

THORIUM PHOSPHIDES
Raman Effect
Infrared and Raman studies of phonons and electrons in Th_3P_4 and Th_3As_4, 9:31179 (RA;IL)

THORIUM SULFIDES
X-Ray Diffraction
High pressure x-ray diffraction study of actinide compounds. Thorium dioxide and thorium monosulfide, 9:31228 (RA;IL)

THORON
See RADON 220

THREE MILE ISLAND-2 REACTOR
Cleaning
NRC plan for cleanup operations at Three Mile Island Unit 2. Rev. 2, 9:30734 (R;US)
Decontamination
NRC plan for cleanup operations at Three Mile Island Unit 2. Rev. 2, 9:30734 (R;US)
Review of a test program for qualifying the solidification of Epicor-II resins with cement, 9:30346 (R;US)
Reactor Accidents
EPRI sponsored TMI-2 research program, 9:30911 (RA;US)
Review of light water reactor safety through the Three Mile Island accident, 9:30944 (R;US)
Repair
NRC plan for cleanup operations at Three Mile Island Unit 2. Rev. 2, 9:30734 (R;US)

THREE-BODY PROBLEM
Algorithms
Two-center problem of quantum mechanics. Pt. 9. Calculation algorithm of matrix elements with m not equal to 0, 9:31951 (R;SU;In Russian)
Bound State
Momentum-space solution of a bound-state nuclear three-body problem with two charged particles, 9:32235 (J;US)
Wave Functions
Momentum-space solution of a bound-state nuclear three-body problem with two charged particles, 9:32235 (J;US)

THULIUM 169 TARGET
Chlorine 35 Reactions
Evaporation decay and associated gamma multiplicity for ^{204}Rn via three fusion channels, 9:32144 (J;US)

THULIUM COMPOUNDS
Diffusion
Limit diffusion coefficients and hydration (numbers) of some trivalent actinide and lanthanide ions, 9:31358 (RA;IL)
Hydration
Limit diffusion coefficients and hydration (numbers) of some trivalent actinide and lanthanide ions, 9:31358 (RA;IL)

THYROID STIMULATING HORMONE
See TSH

THYROXINE
Radioimmunoassay
Regional intercomparison for quality control of radioassays used in thyroid studies. Part of a coordinated programme on quality control of techniques in in-vitro assay of thyroid related hormones. Final report for the period 1 October 1978 - 31 August 1982, 9:31744 (R;AT)

TIGHT SANDS
See SANDSTONES

TIME INTERVAL ANALYZERS
Design
Multichannel interval timer, 9:31436 (J;US)
Memory Devices
Buffer memory unit for time measurements at critical assemblies, 9:31534 (R;SU;In Russian)
Performance
Multichannel interval timer, 9:31436 (J;US)

TIME-OF-DAY PRICING
See TIME-OF-USE PRICING

TIME-OF-SEASON PRICING
See TIME-OF-USE PRICING

TIME-OF-USE PRICING
Industrial response to time-of-use rates: quantitative analysis of French, English and Welsh data. Final report, 9:31037 (R;US)

TIN
Absorption Spectra
Far-infrared absorption by granular superconductors, 9:31208 (J;US)
Carbon 12 Reactions
Deuteron inclusive spectra from collisions of ^{12}C with different targets at 3.6 GeV/nucl., 9:32079 (RA;HU)
Material Balance
Elemental partitioning in ash depositories and material balances for a coal burning facility by spark source mass spectrometry, 9:30167 (J;US)
Superconductivity
Far-infrared absorption by granular superconductors, 9:31208 (J;US)

TIN COMPOUNDS
Magnetic Susceptibility
Anisotropic spin fluctuations in cubic $CeSn_3$, 9:31209 (J;US)
Mixed State
High-field specific heats of A15 V_3Si and Nb_3Sn, 9:31271 (J;US)
Specific Heat
Anisotropic spin fluctuations in cubic $CeSn_3$, 9:31209 (J;US)
High-field specific heats of A15 V_3Si and Nb_3Sn, 9:31271 (J;US)

TISSUE CULTURES
Dose-Response Relationships
Alpha-particle irradiations of C3H/10T1/2, 9:31756 (RA;US)
TITANIUM
Antiproton Reactions
Λ^0 production from low energy antiproton annihilations in complex nuclei, 9:32094 (J;US)
Benchmarks
Materials development for fast breeder reactor cores, 9:30773 (J;US)
Certification
Materials development for fast breeder reactor cores, 9:30773 (J;US)
Ion Implantation
Radiation blistering and hydrogen permeability of titanium nitride coating produced on titanium by ion implantation, 9:31193 (RA;UA;In Russian)
Permeability
Radiation blistering and hydrogen permeability of titanium nitride coating produced on titanium by ion implantation, 9:31193 (RA;UA;In Russian)
Physical Radiation Effects
Thin layer activation for industry, 9:30425 (RA;SU)
TITANIUM 48 REACTIONS
Fusion Reactions
Evaporation decay and associated gamma multiplicity for ^{204}Rn via three fusion channels, 9:32144 (J;US)
TITANIUM NITRIDES
Deposition
Radiation blistering and hydrogen permeability of titanium nitride coating produced on titanium by ion implantation, 9:31193 (RA;UA;In Russian)
TITANIUM OXIDES
See also HOLLANDITE
PEROVSKITE
ZIRCONOLITE
Dissolution
Dissolution of aluminum-, titanium-, and zirconium-based crystalline waste form components under hydrothermal conditions, 9:30382 (J;US)
TLD (DOSEMETERS)
See THERMOLUMINESCENT DOSEMETERS
TLD (DOSIMETRY)
See THERMOLUMINESCENT DOSIMETRY
TLD SYSTEMS
See THERMOLUMINESCENT DOSEMETERS
TMR REACTORS
Operation
START/TM: a study of start-up and fractional power operation of tandem mirror fusion reactors, 9:32351 (R;US)
Reactor Start-Up
START/TM: a study of start-up and fractional power operation of tandem mirror fusion reactors, 9:32351 (R;US)
TMX DEVICES
Impurities
Impurity characteristics of TMX-U, 9:32323 (R;US)
Plasma Density
Mechanical device for enhancing halo density in the TMX-U tandem mirror, 9:32322 (R;US)
TOILETS
Water Use
Conserving flush toilet water use, 9:31000 (R;US)
TOKAMAK DEVICES
See also ALCATOR DEVICE
ASDEX TOKAMAK
PDX DEVICES
TOKAPOLE DEVICES
Design
Design and technological peculiarities of the TM-4A installation, 9:32355 (RA;SU;In Russian)
ECR Heating
Electron distribution function for electron-cyclotron heating in tokamaks, 9:32338 (TG;US)
Electrical Insulators
Complex studies of mockups of electric insulators of cryoresistive coils of the T-15 device electromagnet system, 9:32356 (RA;SU;In Russian)
Impurities
Investigation of neutral beam driven impurity flow reversal as an impurity control method in future tokamaks, 9:32313 (R;US)
Rotation and impurity transport in a tokamak plasma with directed neutral beam injection, 9:32314 (R;US)
Lower Hybrid Heating
Lower hybrid wave resonance cone detection via CO_2 laser scattering, 9:32364 (R;US)
Plasma Confinement
Electron temperature limit for poloidal equilibrium and tokamak containment scaling, 9:32334 (J;GB)
Theoretical and experimental progress in tokamak plasma confinement, 9:32389 (BA;AT;In German)
Plasma Diagnostics
Possibility of using pulsed CO_2 lasers for radiation scattering diagnostics in tokamak plasmas, 9:32333 (TG;GB)
Plasma Drift
Rotation of a tenuous plasma with high toroidal velocity in a tokamak, 9:32337 (TG;US)
TOKAMAK FUSION TEST REACTOR
See TFTR REACTORS
TOKAMAK TYPE REACTORS
See also DOUBLET REACTORS
INTOR TOKAMAK
ISX TOKAMAK
TFTR REACTORS
Accidents
Safety and deterministic failure analyses in high-beta D-D tokamak reactors, 9:32352 (R;US)
Breeding Blankets
Water-cooled liquid and solid breeder blanket concepts, 9:32341 (R;US)
Failures
Safety and deterministic failure analyses in high-beta D-D tokamak reactors, 9:32352 (R;US)
Fuel Injection Systems
High pressure tokamak fuel injector. Phase II. Final report, December 1977-December 1979, 9:32362 (R;US)
Safety
Safety and deterministic failure analyses in high-beta D-D tokamak reactors, 9:32352 (R;US)
TOKAPOLE DEVICES
Alfven Waves
Experimental observation of the shear Alfven resonance in a tokamak, 9:32309 (R;US)
Cyclotron Radiation
Second harmonic electron cyclotron emission studies of Tokapole-II plasmas, 9:32308 (R;US)
Plasma Disruption
Disruptive instabilities in a poloidal divertor tokamak, 9:32307 (R;US)
Plasma Macroinstabilities
Disruptive instabilities in a poloidal divertor tokamak, 9:32307 (R;US)
TOOLS
Not for EDUCATIONAL TOOLS.
Diamonds
Single point diamond crushing of glass, 9:31369 (R;US)
TORNADOES
Spatial Distribution
Violent tornado climatography, 1880-1982, 9:31644 (R;US)
TOSCO PROCESS
Evaluation
Conceptual process designs: Union B, Paraho, and Tosco II. Naval Oil Shale Reserves management support and systems engineering project, 9:30268 (R;US)
TOTAL ENERGY SYSTEMS
Diesel Engines
Diesel engine total energy system development in residential/commercial applications by 2000, 9:31056 (R;US)
Feasibility Studies
Appraisal and analysis of opportunities for a joint DOE/DOD energy demonstration program. Final report, 9:31022 (R;US)
Stirling Engines
Stirling engine total energy system development in residential/commercial applications by 2000, 9:31057 (R;US)

TOTAL-ABSORPTION SPECTROMETERS
See SHOWER COUNTERS
TOWER FOCUS COLLECTORS
Testing
Collector subsystem, collector system functional test: Test Procedure 111. Revision 1, 9:30540 (R;US)
TOWER FOCUS POWER PLANTS
See also BARSTOW SOLAR PILOT PLANT
Computer-Aided Design
Evaluation and conception method of fields of focused heliostats, 9:30541 (R;FR;In French)
Heliostats
Evaluation and conception method of fields of focused heliostats, 9:30541 (R;FR;In French)
Meetings
IEA/SSPS - CRS Workshop, April 1983. Executive summary, 9:30530 (R;US)
TOXINS
Health Hazards
Protection against trichothecene mycotoxins. Final report, 9:31811 (R;US)
TRACK DETECTORS (GAS)
See GAS TRACK DETECTORS
TRACKS
See PARTICLE TRACKS
TRAINS
Air Conditioners
Air-conditioning, ergonomical and safe design of engineers cabins of Diesel locomotives in hard coal mining, 9:31370 (R;DE;In German)
TRANSFER (HEAT)
See HEAT TRANSFER
TRANSFER (IN ENVIRONMENT)
See RADIONUCLIDE MIGRATION
TRANSFER (IN ORGANISM)
See RADIONUCLIDE KINETICS
TRANSFER (MASS)
See MASS TRANSFER
TRANSFER REACTIONS
For nuclear reactions only; see also CHARGE EXCHANGE and ELECTRON TRANSFER.
Nuclear Models
Effective interaction for direct transfer reactions, 9:32170 (RA;DE;In German)
TRANSFORMATIONS
Unitary Symmetry
Unitary transformations, Weyl's association and the role of canonical transformations, 9:32283 (R;CA)
TRANSFORMATIONS (ONCOGENIC)
See ONCOGENIC TRANSFORMATIONS
TRANSFORMATIONS (PHASE)
See PHASE TRANSFORMATIONS
TRANSIENTS
Heat Flux
Post-CHF model assessment with Lehigh nonequilibrium data, 9:30950 (R;US)
TRANSISTORS
See also MOS TRANSISTORS
Noise
High precision measurement of transistor noise with automatic calibration under computer control, 9:31445 (J;US)

POPLARS
Plant Growth
Tree growth studies on uranium mill tailings, 9:30386 (R;CA)
Preferred Species
Tree growth studies on uranium mill tailings, 9:30386 (R;CA)
1,3,5-TRIAMINO-2,4,6-TRINITROBENZENE
See TATB
TRIAZOLES
Radiosensitivity Effects
3-nitro triazole as a hypoxic cell sensitizer, 9:31760 (RA;US)
TRIBOLOGY
Meetings
Hard coatings for tribological systems operating under extreme conditions, 9:31083 (R;US)
TRIGA TYPE REACTORS
Design
High-speed motion neutron radiography, 9:31610 (J;US)
Performance
High-speed motion neutron radiography, 9:31610 (J;US)
TRIIODOTHYRONINE
Biological Effects
Role of thyroid hormone in the induction of neoplastic transformation by chemical carcinogens, 9:31802 (RA;US)
Radioimmunoassay
Regional intercomparison for quality control of radioassays used in thyroid studies. Part of a coordinated programme on quality control of techniques in in-vitro assay of thyroid related hormones. Final report for the period 1 October 1978 - 31 August 1982, 9:31744 (R;AT)
TRIPLET PARTICLES
See QUARKS
TRITICUM
See WHEAT
TRITIUM
Binding Energy
Some applications of the evolution method in a coupling constant in nuclear physics, 9:32225 (R;SU;In Russian)
Excretion
Tritium distribution and excretion following intratracheal instillation of glass microballoon fragments in rats, 9:31795 (J;GB)
Intratracheal Administration
Tritium distribution and excretion following intratracheal instillation of glass microballoon fragments in rats, 9:31795 (J;GB)
Particle Production
Experimental data on the inclusive cross sections of protons, deuterons and tritium cumulative production, 9:31990 (R;XJ;In Russian)

Radioecological Concentration
Environmental radiation data report 34, April-June 1983, 9:31691 (R;US)
Tissue Distribution
Tritium distribution and excretion following intratracheal instillation of glass microballoon fragments in rats, 9:31795 (J;GB)
TRITON REACTIONS
Compound-Nucleus Reactions
3291-keV J/sup π/ = $(25/2)^+$ level in ^{205}Tl, 9:32143 (J;US)
Elastic Scattering
Main features of the four nucleon interactions at medium energies and Glauber sum rules, 9:32073 (RA;HU)
Quasi-Elastic Scattering
Main features of the four nucleon interactions at medium energies and Glauber sum rules, 9:32073 (RA;HU)
Stripping
^{154}Eu(t, p) reaction: Some new systematics in the N = 90 spherical-deformed transition region, 9:32136 (J;NL)
TRIUMF CYCLOTRON
Kaon Beams
Studies for a TRIUMF Kaon Factory, 9:31480 (R;CA)
Performance
Status of TRIUMF and plans for development, 9:31518 (R;CA)
TRI-UNIVERSITY MESON FACILITY
See TRIUMF CYCLOTRON
TROJAN REACTOR
Radioactivity Transport
Coolant chemistry effects on radioactivity at two pressurized water reactor plants, 9:30730 (R;US)
TROMBE WALLS
Convection
Experimental study of thermocirculation in a variable geometry Trombe wall. Final report, 9:30550 (R;US)
Draft Control Systems
Sunearth uni-directional damper. Final report, 9:30551 (R;US)
Marketing
Sunearth uni-directional damper. Final report, 9:30551 (R;US)
TROMMELS
Testing
Pilot and full-scale tests of primary trommels used to improve quality of refuse-derived fuel, 9:31123 (BA;US)
TROUT
Biological Shock
Effects of suspended volcanic ash and thermal shock on susceptibility of juvenile salmonids to disease, 9:31814 (R;US)
TSH
Chemical Preparation
Development of radioimmunoassay systems for the human pituitary gland. Final report for the period 1 March 1980 - 30 April 1983, 9:31730 (R;AT)
Radioimmunoassay
Development of radioimmunoassay systems for the human pituitary gland. Final report for the period 1 March 1980 - 30 April 1983, 9:31730 (R;AT)
TSL PROCESS
Coal Liquids
Refining and upgrading of synfuels from coal and oil shales by advanced catalytic processes, 9:30113 (R;US)
TUBES
For objects of tubular shape; not for DRIFT TUBES, ELECTRON TUBES or IMAGE STORAGE TUBES.
See also PRESSURE TUBES
Acoustic Testing
Electromagnetic Acoustic-Wave Transducers (EMATs) for thickness gauging and defect detection in boiler tubing, 9:30638 (RA;US)
Casting
The effect of delta-ferrite upon the low temperature mechanical properties of centrifugally cast stainless steels, 9:31217 (BA;US)
Coatings
Augmented heat transfer rates in utility condensers. Final report (Fluoroplastic coating on lower 34° of arc to promote dropwise condensation), 9:31416 (R;US)
Corrosion
Analysis of ultrasonic testing survey, 9:30639 (RA;US)
Effects of water chemistry on waterwall tube failures, 9:30626 (RA;US)
Influence of coal quality on boiler availability due to fireside tube wastage, 9:30629 (RA;US)
Program to measure the effects of excess air on tube wastage, 9:30630 (RA;US)
Waterwall tube wastage in the burner zone causes and cures, 9:30628 (RA;US)
Eddy Current Testing
Eddy-current inspection for steam generator tubing program. Annual progress report for period ending December 31, 1983. Vol. 4, 9:31423 (R;US)
Electromagnetic Testing
Electromagnetic Acoustic-Wave Transducers (EMATs) for thickness gauging and defect detection in boiler tubing, 9:30638 (RA;US)
Failures
Accelerated waterwall tube wastage and failures at the Morgantown Generating Station, 9:30618 (RA;US)
Application of Kepner-Tregoe methodology to the root-cause failure analysis of boiler tubes, 9:30620 (RA;US)
Boiler tube failures: The Number One availability problem for utilities, 9:30613 (RA;US)
Canada's boiler tube failure experience, 9:30615 (RA;US)
Damage in superheater tubes in supercritical boilers, 9:30624 (RA;US)
Effects of water chemistry on waterwall tube failures, 9:30626 (RA;US)
Failures and inspections of fossil-fired boiler tubes: 1983 conference and workshop, 9:30612 (R;US)
How to identify failure modes, 9:30621 (RA;US)
Operating guide on boiler tube failures: EPRI research project RP 1890-1, 9:30622 (RA;US)
Operating experience of steam generator tube failures and NDE procedures within the American Electric Power System, 9:30625 (RA;US)
TVA's boiler tube failure reporting system and evaluation, 9:30616 (RA;US)
Waterwall tube failure analysis at New Boston Station of Boston Edison Company, 9:30617 (RA;US)
Heat Transfer
Augmented heat transfer rates in utility condensers. Final report (Fluoroplastic coating on lower 34° of arc to promote dropwise condensation), 9:31416 (R;US)
Spiral fluted tubing for augmented heat transfer in process industries. Final report, 9:31090 (R;US)
Hydrogen Embrittlement
Hydrogen damage - hopefully in retrospect, 9:30619 (RA;US)
Inspection for hydrogen damage in waterwall tubes using ultrasonic techniques, 9:30641 (RA;US)
Inspection
Boiler tube failures: The Number One availability problem for utilities, 9:30613 (RA;US)
Failures and inspections of fossil-fired boiler tubes: 1983 conference and workshop, 9:30612 (R;US)
Infrared boiler tube inspection, 9:30636 (RA;US)
Mitigating forced outages by selective replacement of boiler tubes, 9:30642 (RA;US)
Ultrasonic inspection of boiler tubes, 9:30637 (RA;US)
Magnetization
The effect of delta-ferrite upon the low temperature mechanical properties of centrifugally cast stainless steels, 9:31217 (BA;US)
Nondestructive Testing
Operating experience of steam generator tube failures and NDE procedures within the American Electric Power System, 9:30625 (RA;US)
Workshop questionnaire on Nondestructive Examination (NDE) of boiler tubes, 9:30614 (RA;US)
Ultrasonic Testing
Analysis of ultrasonic testing survey, 9:30639 (RA;US)
Inspection for hydrogen damage in waterwall tubes using ultrasonic techniques, 9:30641 (RA;US)
Ultrasonic examination of boiler tubing: Automated data acquisition and computer-aided data analysis, 9:30634 (RA;US)

Ultrasonic inspection of boiler tubes, 9:30637 (RA;US)
TUBES (CONDUITS)
See PIPES
TUFF
Explosive Fracturing
New borehole fracturing technique improves gas production, 9:30259 (RA;US)
TUMORS
See NEOPLASMS
TUNGSTEN
Atom Collisions
Application of the semiclassical perturbation approximation to scattering from surfaces. Generalization to include phonon inelasticity, 9:31970 (J;US)
Catalytic Effects
Hydroconversion of organic nitrogen compounds on refining catalysts, 9:30236 (R;DE;In German)
Material Balance
Elemental partitioning in ash depositories and material balances for a coal burning facility by spark source mass spectrometry, 9:30167 (J;US)
Physical Radiation Effects
Neutron irradiation effects on tungsten and molybdenum optical properties and possible application of optical measurements for studies of radiation-induced defects in metals, 9:31194 (RA;UA;In Russian)
TUNGSTEN 168
E2-Transitions
Long lifetimes through the backbend in ^{168}W, 9:32135 (J;US)
TUNGSTEN 180
Mass Spectra
Precise atomic masses and mass differences for Hf, Ta, W and Re, 9:31872 (R;CA)
TUNGSTEN 181
Electron Capture Decay
Sup(181)W decay, 9:32133 (RA;SU;In Russian)
TUNGSTEN BRONZE
Hexagonal Lattices
New tetragonal and hexagonal tungsten bronze type phases with actinides ions, 9:31184 (RA;IL)
Tetragonal Lattices
New tetragonal and hexagonal tungsten bronze type phases with actinides ions, 9:31184 (RA;IL)
TUNGSTEN OXIDES
See also WOLFRAMITE
Electrochromism
Electrochromic materials for the regulation of solar energy transmission through windows, 9:30558 (R;US)
TUNNELING
Advisory Committees
Report for 1981 and 1982, US National Committee on Tunneling Technology, 9:31384 (R;US)
Research Programs
Report for 1981 and 1982, US National Committee on Tunneling Technology, 9:31384 (R;US)
TURBINE BLADES
Inspection
Examination of the final design of the rotor blades GROWIAN I, 9:30597 (R;DE;In German)
Quality Assurance
Examination of the final design of the rotor blades GROWIAN I, 9:30597 (R;DE;In German)
TURBINES
See also GAS TURBINES
STEAM TURBINES
WIND TURBINES
Failures
Assessment of turbine-casing impact code calculations. Final report, 9:30870 (R;US)
TURBOGENERATORS
Fatigue
Determination of torsional fatigue life of large turbine generator shafts. Final report, 9:31385 (R;US)
Shafts
Determination of torsional fatigue life of large turbine generator shafts. Final report, 9:31385 (R;US)
TURBULENT FLOW
Pulsed Neutron Techniques
Flow measurement in sodium and water using pulsed-neutron activation: Part 1, theory, 9:30775 (J;US)
TURKEY
Research Programs
Progress report 1982, 9:32392 (R;TR;In Turkish, English)
TURNOVER (RADIONUCLIDES)

Computerized Control Systems
Slack and overload rope protection system. Open file report, 28 Mar 79-15 Jan 83, 9:30211 (R;US)
Continuous Miners
Coal-cutting forces and primary dust generation using radial gage cutters. Report of investigations/1983, 9:30210 (R;US)
Cost
Coal Mining Cost Model (MOD-3), 9:30200 (R;US)
Dusts
Coal-cutting forces and primary dust generation using radial gage cutters. Report of investigations/1983, 9:30210 (R;US)
Dust suppression with gateroad production by shearer-loader along with the face line, 9:31460 (R;DE;In German)
Electrical Equipment
Experience with diesel-powered mining equipment in West Virginia, 9:30194 (RA;US)
Haulage Equipment
Methods of reducing exhaust emissions from diesel engines and improving safety, 9:30197 (RA;US)
Hoists
Slack and overload rope protection system. Open file report, 28 Mar 79-15 Jan 83, 9:30211 (R;US)
Mine Roadways
Driving of a stone drift using the 'New Austrian Tunnelling Method' at Nordstern colliery, 9:31461 (R;DE;In German)
Electrified driving of stone drifts, 9:30191 (R;DE;In German)
Mining Equipment
Electrical systems for diesel engines used underground, 9:30198 (RA;US)
Epidemiological studies of hazards from diesel emissions, 9:30193 (RA;US)
Experience with diesel-powered mining equipment in West Virginia, 9:30194 (RA;US)
Health hazards from underground use of diesel engines, 9:30220 (RA;US)
Health hazards from diesel exhausts, 9:30221 (RA;US)
Methods of reducing exhaust emissions from diesel engines and improving safety, 9:30197 (RA;US)
Requirements for diesel engine approval and maintenance in Kentucky, 9:30195 (RA;US)
Safety and productivity of mining equipment with diesel engines, 9:30192 (RA;US)
United Kingdom experience with underground use of diesel engines, 9:30196 (RA;US)
Productivity
Safety and productivity of mining equipment with diesel engines, 9:30192 (RA;US)
Safety
Safety and productivity of mining equipment with diesel engines, 9:30192 (RA;US)
Trains
Air-conditioning, ergonomical and safe design of engineers cabins of Diesel locomotives in hard coal mining, 9:31370 (R;DE;In German)
Ventilation
Safety and productivity of mining equipment with diesel engines, 9:30192 (RA;US)
United Kingdom experience with underground use of diesel engines, 9:30196 (RA;US)
UNION OIL PROCESS
Evaluation
Conceptual process designs: Union B, Paraho, and Tosco II. Naval Oil Shale Reserves management support and systems engineering project, 9:30268 (R;US)
UNITED KINGDOM
Nuclear Facilities
1983 No. 919. The Nuclear Installations (Prescribed Sites) Regulations 1983, 9:30876 (R;GB)
Energy Act 1983, 9:30875 (R;GB)
Time-of-Use Pricing
Industrial response to time-of-use rates: quantitative analysis of French, English and Welsh data. Final report, 9:31037 (R;US)
UNITED STATES OF AMERICA

Availability
Optimization of fuel cycle strategies with constraints on uranium availability, 9:30792 (J;US)
Conversion Ratio
Some neutron physical consequences of maximizing the conversion ratio of pressurized water reactors operated in the uranium-plutonium cycle, 9:30735 (J;US)
Economic Impact
Optimization of fuel cycle strategies with constraints on uranium availability, 9:30792 (J;US)
Electronic Structure
Recent applications of the relativistically parameterized extended Huckel method (REX) on actinide compounds, 9:31339 (RA;IL)
Energy Absorption
Effect of fluorescence, bremsstrahlung, and annihilation radiation on the spectra and energy deposition of gamma rays in bulk media, 9:30802 (J;US)
Fuel Cycle
Optimization of fuel cycle strategies with constraints on uranium availability, 9:30792 (J;US)
Hydridation
Morphology of the reaction of uranium with hydrogen, 9:31231 (RA;IL)
Leaching
Comparative leaching behavior of SYNROC B and a borosilicate glass, 9:30376 (J;US)
Neutron Emission
Neutron yields from uranium-fluorine compounds, 9:31284 (RA;IL)
Nuclear Materials Management
Automatic chemical determination facility for plutonium and uranium, 9:30292 (TJ;US)
Optimization of fuel cycle strategies with constraints on uranium availability, 9:30792 (J;US)
Optical Properties
Optical and thermodynamic properties of uranium at elevated temperature, 9:31187 (RA;IL)
Partition Functions
Ab-initio calculation of uranium partition functions, 9:31910 (RA;IL)
Potentiometry
Automatic chemical determination facility for plutonium and uranium, 9:30292 (TJ;US)
Investigations in the field of development of methods for determination of composition of spent fuels from WWER-type reactors, 9:31283 (RA;SU;In Russian)
Potentiometric investigation of uranyl(VI)- and thorium(IV)-glutathionate systems, 9:31285 (RA;IL)
Prices
Optimization of fuel cycle strategies with constraints on uranium availability, 9:30792 (J;US)
Quantitative Chemical Analysis
Preliminary study on the determination of boron and cadmium impurities in uranium oxide and uranium metals by inductively coupled plasma-atomic emission spectroscopy, 9:31289 (R;US)
Radiation Effects
Effect of fluorescence, bremsstrahlung, and annihilation radiation on the spectra and energy deposition of gamma rays in bulk media, 9:30802 (J;US)
Spectrophotometry
Investigations in the field of development of methods for determination of composition of spent fuels from WWER-type reactors, 9:31283 (RA;SU;In Russian)

Thermodynamic Properties
Optical and thermodynamic properties of uranium at elevated temperature, 9:31187 (RA;IL)
Voltametry
Automated controlled-potential coulometric determination of uranium, 9:31276 (R;CA)
X-Ray Fluorescence Analysis
Passive-X-ray fluorescence determination of the plutonium and uranium ratio in burnt-up fuel. Final report for the period 1 December 1981 - 30 November 1982, 9:30290 (R;AT)
Possibilities of plutonium analysis by means of x-ray flourescence with iridium 912 radioactive sources, 9:31310 (TJ;US)

URANIUM 233
Production
Status report on the fusion breeder, 9:30854 (J;US)

URANIUM 233 TARGET
Neutron Reactions
Neutron multiplicities of ^{252}Cf and the fissile nuclei. Final report, 9:32146 (R;US)

URANIUM 235
Capture-to-Fission Ratio
Measurements of structural material capture to uranium-235 fission rate ratios in an intermediate spectrum assembly, 9:30785 (J;US)
Fission Spectra
Measurements of structural material capture to uranium-235 fission rate ratios in an intermediate spectrum assembly, 9:30785 (J;US)
Isotope Ratio
Determination of plutonium and uranium isotopic ratios in air for environmental monitoring, 9:31675 (RA;IL)
Radioecological Concentration
Environmental radiation data report 34, April-June 1983, 9:31691 (R;US)

URANIUM 235 TARGET
Neutron Reactions
Measurement of the ^{235}U/^{238}U fission cross section ratio in the ^{235}U fission neutron spectrum, 9:32147 (R;AT)
Neutron multiplicities of ^{252}Cf and the fissile nuclei. Final report, 9:32146 (R;US)

URANIUM 236
Excited States
Collective mass and zero-point energy in the generator-coordinate method, 9:32184 (R;DE;In German)
Production
The role of plutonium-238 in nuclear fuel cycles, 9:30711 (J;US)

URANIUM 238
Fission Barrier
Fission barriers of compressed nuclei, 9:32138 (RA;DE)
Vibrational States
Quadrupole vibrations of ^{238}U in collective transport theory, 9:32149 (RA;DE)

URANIUM 238 REACTIONS
Heavy Ion Reactions
Flow analysis of nuclear collisions - probing the properties of dense nuclear matter, 9:32100 (RA;HU)
Pair Production
Observation of a narrow line in the positron spectra from U + U and U + Th collisions, 9:32148 (RA;DE;In German)

URANIUM 238 TARGET
Neutron Reactions
Measurement of the ^{235}U/^{238}U fission cross section ratio in the ^{238}U fission neutron spectrum, 9:32147 (R;AT)
Sensitivity of computed uranium-238 self-shielding factors to the choice of the unresolved average resonance parameters, 9:32156 (J;US)
Uranium 238 Reactions
Flow analysis of nuclear collisions - probing the properties of dense nuclear matter, 9:32100 (RA;HU)
Observation of a narrow line in the positron spectra from U + U and U + Th collisions, 9:32148 (RA;DE;In German)

URANIUM ALLOYS
See also URANIUM BASE ALLOYS
Chemical Analysis
Automated controlled-potential coulometric determination of uranium, 9:31276 (R;CA)
Electric Conductivity
Transport properties of USb and UAs single crystals, 9:31185 (RA;IL)
Hall Effect
Transport properties of USb and UAs single crystals, 9:31185 (RA;IL)
Lattice Parameters
Valence transition of uranium in (U,Y)Sb, 9:31190 (RA;IL)
Magnetic Properties
Magnetic ground state of a heavy-electron system: U_2Zn_{17}, 9:31205 (J;US)

URANIUM ARSENIDES
Electric Conductivity
Transport properties of USb and UAs single crystals, 9:31185 (RA;IL)
Hall Effect
Transport properties of USb and UAs single crystals, 9:31185 (RA;IL)
Specific Heat
Low temperature heat capacity of rocksalt uranium monopnictides, 9:31348 (RA;IL)

URANIUM BASE ALLOYS
Lattice Parameters
Diffusion couple studies in the U-Ga and Th-Ga systems, 9:31188 (RA;IL)

URANIUM CHLORIDES
Crystal Field
Calculation of the crystal field parameters of the U^{4+} ion in UCl_4, 9:31178 (RA;IL)

URANIUM COMPLEXES
Electronic Structure
Pseudotetrahedral versus related trigonal bipyramidal organouranium (IV) - complexes. Interrelations of molecular and electronic structure, 9:31341 (RA;IL)
Molecular Structure
Pseudotetrahedral versus related trigonal bipyramidal organouranium (IV) - complexes. Interrelations of molecular and electronic structure, 9:31341 (RA;IL)

URANIUM COMPOUNDS

URANIUM NITRATES
URANIUM OXIDES
URANIUM PHOSPHIDES
URANIUM SELENIDES
URANIUM SULFIDES
URANYL COMPOUNDS
Chemical Preparation
Uranium III and IV borohydrides in solution. Applied synthesis of new uranium III compounds, 9:31359 (RA;IL;In French)
Chemical Reactions
Reactivity of $M(NEt_2)_4$ towards cyclopentadiene. Synthesis, characterization and reactivity of some MCpsub(n)(NEt$_2$)sub(4-n) (M = U(IV)) and Th(IV), 9:31352 (RA;IL)
Fluorescence
Red fluorescence of U^{4+} in the incommensurate phase of $ThCl_4$, 9:31357 (RA;IL)
Laves Phases
5f-electrons in uranium laves-phase compounds. Photoemission from UMn_2, UFe_2, UCo_2, UFeNi, UOs_2 and UIr_2, 9:31180 (RA;IL)
Magnetic Properties
Crystal field models for the interpretation of the magnetic properties of some U and Np tetragonal compounds, 9:31342 (RA;IL)
Preparation and properties of some new organometallic compounds of actinides, 9:31351 (RA;IL)
Photoemission
5f-electrons in uranium laves-phase compounds. Photoemission from UMn_2, UFe_2, UCo_2, UFeNi, UOs_2 and UIr_2, 9:31180 (RA;IL)

Structural Chemical Analysis
Reactivity of $M(NEt_2)_4$ towards cyclopentadiene. Synthesis, characterization and reactivity of some MCpsub(n)(NEt2)sub(4-n) (M = U(IV)) and Th(IV), 9:31352 (RA;IL)
Synthesis
Reactivity of $M(NEt_2)_4$ towards cyclopentadiene. Synthesis, characterization and reactivity of some MCpsub(n)(NEt2)sub(4-n) (M = U(IV)) and Th(IV), 9:31352 (RA;IL)
Tetragonal Lattices
Crystal field models for the interpretation of the magnetic properties of some U and Np tetragonal compounds, 9:31342 (RA;IL)

URANIUM DEPOSITS
Exploration
'Hot' granites. Some general remarks (Alberta), 9:30281 (RA;CA)
Geochemistry and the distribution of uranium and thorium in the granitoid rocks of the south mountain batholith, Nova Scotia. Some genetic and exploration implications, 9:30282 (RA;CA)
Geochemical Surveys
Geochemistry and the distribution of uranium and thorium in the granitoid rocks of the south mountain batholith, Nova Scotia. Some genetic and exploration implications, 9:30282 (RA;CA)
Geochemistry
Catahoula formation of the Texas Coastal Plain: origin, geochemical evolution, and characteristics of uranium deposits, 9:30277 (R;US)
Gravity Surveys
'Hot' granites. Some general remarks (Alberta), 9:30281 (RA;CA)
Meetings
Uranium in granites. Proceedings of a workshop (Canada), 9:30280 (R;CA)
Mineralization
Catahoula formation of the Texas Coastal Plain: origin, geochemical evolution, and characteristics of uranium deposits, 9:30277 (R;US)
Origin
Epigenetic zonation and fluid flow history of uranium-bearing fluvial aquifer systems, south Texas uranium province. Report of Investigations No. 119, 9:30278 (R;US)
Prospecting
National Uranium Resource Evaluation stream-sediment, hydrogeochemical, and aeromagnetic data characteristics of the Piedmont Region, eastern United States: a data release, 9:30279 (R;US)
Radiometric Surveys
'Hot' granites. Some general remarks (Alberta), 9:30281 (RA;CA)

URANIUM DIOXIDE
Calcination
Moisture determination in plutonium and uranium-plutonium oxides, 9:31308 (TJ;US)
Carbonates
Investigation of the ammonium-uranyl-carbonate route for the production of sintered UO_2 pellets, 9:30291 (RA;IL)
Chemical Analysis
Automatic chemical determination facility for plutonium and uranium, 9:30292 (TJ;US)
Moisture determination in plutonium and uranium-plutonium oxides, 9:31308 (TJ;US)
Plutonium content of fast-neutron-reactors fuels by x-ray fluorescence, 9:31307 (TJ;US)
Degassing
Hot vacuum outgassing to ensure low hydrogen content in MOX fuel pellets for thermal reactors, 9:30289 (R;IN)
Moisture
Moisture determination in plutonium and uranium-plutonium oxides, 9:31308 (TJ;US)
Oxidation
Behavior in air at 175 to 250°C of UO_2 fuel fragments extracted from irradiated elements, 9:30306 (RA;US)
Post-irradiation behaviour of defected UO_2 fuel elements in air at 220 to 250°C, 9:30305 (RA;US)
Uranium dioxide fuel oxidation in air below 350°C, 9:30307 (RA;US)
Sintering
Investigation of the ammonium-uranyl-carbonate route for the production of sintered UO_2 pellets, 9:30291 (RA;IL)

URANIUM FLUORIDES
See also URANIUM HEXAFLUORIDE
Neutron Emission
Neutron yields from uranium-fluorine compounds, 9:31284 (RA;IL)
Uranyl Fluorides
Neutron yields from uranium-fluorine compounds, 9:31284 (RA;IL)

URANIUM HEXAFLUORIDE
Toxicity
Acute toxicity of the hydrolysis products of uranium hexafluoride (UF_6) when inhaled by the rat and guinea pig. Final report, 9:31808 (R;US)
Weight Measurement
Semiportable load-cell-based weighing system prototype of 18.14-metric-ton (20-ton) capacity for UF_6 cylinder weight verifications: description and testing procedure, 9:30399 (R;US)

URANIUM HYDRIDES
Metallography
Morphology of the reaction of uranium with hydrogen, 9:31231 (RA;IL)
Microstructure
Morphology of the reaction of uranium with hydrogen, 9:31231 (RA;IL)

URANIUM IONS
Crystal Field
Calculation of the crystal field parameters of the U^{4+} ion in UCl_4, 9:31178 (RA;IL)

URANIUM MINERALS

URANINITES
URANOPHANE
Geologic Deposits
Airborne radiometric anomalies caused by late kinematic granite rocks in the Molson Lake-Red Sucker Lake area, east-central Manitoba, 9:31839 (RA;CA)
Mineralization
Behaviour of U, Th and other trace elements during evolution of the Guichon Creek Batholith, British Columbia, 9:31846 (RA;CA)
Comparative petrochemistry of two cogenetic monzonitic laccoliths and genesis of associated uraniferous actinolite-apatite-magnetite veins, east arm of Great Slave Lake, District of Mackenzie, 9:31850 (RA;CA)
Uraniferous granitoid rocks from the Superior province of Northwestern Ontario, 9:31848 (RA;CA)
Uraniferous granites and associated mineralization in the Fury and Hecla Strain area, Baffin Island, N.W.T., 9:31852 (RA;CA)
Petrochemistry
Airborne radiometric anomalies caused by late kinematic granite rocks in the Molson Lake-Red Sucker Lake area, east-central Manitoba, 9:31839 (RA;CA)
Behaviour of U, Th and other trace elements during evolution of the Guichon Creek Batholith, British Columbia, 9:31846 (RA;CA)
Comparative petrochemistry of two cogenetic monzonitic laccoliths and genesis of associated uraniferous actinolite-apatite-magnetite veins, east arm of Great Slave Lake, District of Mackenzie, 9:31850 (RA;CA)
Mineralogical and petrochemical properties of heterogeneous granitoid rocks from radioactive occurrences in the Grenville structural province, Ontario and Quebec, 9:31844 (RA;CA)
Radiometric study of three radioactive granites in the Canadian Shield: Elliot Lake, Ontario; Fort Smith, and Fury and Hecla, N.W.T., 9:31851 (RA;CA)
Uraniferous granitoid rocks from the Superior province of Northwestern Ontario, 9:31848 (RA;CA)

Uraniferous granites and associated mineralization in the Fury and Hecla Strain area, Baffin Island, N.W.T., 9:31852 (RA;CA)
Uranium in alkaline intrusions, southeastern British Columbia, 9:31845 (RA;CA)
Petrology
Uranium in alkaline intrusions, southeastern British Columbia, 9:31845 (RA;CA)
Radiometric Surveys
Radiometric study of three radioactive granites in the Canadian Shield: Elliot Lake, Ontario; Fort Smith, and Fury and Hecla, N.W.T., 9:31851 (RA;CA)
URANIUM MINES
Coordinated Research Programs
Joint Panel on Occupational and Environmental Research for Uranium Production 1981 annual report, 9:30392 (R;CA)
Inspection
Regulatory process for uranium mines in Canada -general overview and radiation health and safety in uranium mine-mill facilities, 9:30390 (R;CA)
Radiation Hazards
Regulatory process for uranium mines in Canada -general overview and radiation health and safety in uranium mine-mill facilities, 9:30390 (R;CA)
Regulations
Regulatory process for uranium mines in Canada -general overview and radiation health and safety in uranium mine-mill facilities, 9:30390 (R;CA)
URANIUM NITRATES
Diffusion
Transport processes of actinides in aqueous and nonaqueous solutions, 9:31353 (RA;IL)
URANIUM ORES
Correlations
Some relationships between granitic plutons and the distribution of uranium deposits, 9:31841 (RA;CA)
Geologic Deposits
Influence of a metamorphosed gabbro in the control of uranium-bearing pegmatite dykes, Madawaska Mines, Bancroft, Ontario, 9:31828 (RA;CA)
Some relationships between granitic plutons and the distribution of uranium deposits, 9:31841 (RA;CA)
Uraniferous pegmatites of the Sharlot Lake area, Ontario, 9:31854 (RA;CA)
Uranium mineralization and lithogeochemistry of the Surprise Lake batholith, Atlin, British Columbia, 9:31855 (RA;CA)
Geologic Models
Uranium mineralization and lithogeochemistry of the Surprise Lake batholith, Atlin, British Columbia, 9:31855 (RA;CA)
Leaching
Chlorine-assisted leaching of Key Lake uranium ore, 9:30283 (R;CA)
Hydrochloric acid leaching of Rabbit Lake uranium ore, 9:30286 (R;CA)
Hydrochloric acid leach of Agnew Lake uranium concentrate, 9:30285 (R;CA)
Mineralization
Characteristics of the Okanagan highlands intrusive complex as a source for basalt-type uranium deposits, south-central British Columbia, 9:31838 (RA;CA)
Petrochemistry of the Blanchford Lake complex near Yellowknife, Northwest Territories, 9:31849 (RA;CA)
Petrochemistry
Petrochemistry of the Blanchford Lake complex near Yellowknife, Northwest Territories, 9:31849 (RA;CA)
Uraniferous pegmatites of the Sharlot Lake area, Ontario, 9:31854 (RA;CA)
Uranium mineralization and lithogeochemistry of the Surprise Lake batholith, Atlin, British Columbia, 9:31855 (RA;CA)
URANIUM OXIDE FUEL PLANT

Mass burning systems for solid waste, 9:31118 (BA;US)
Operation
Mass burning systems for solid waste, 9:31118 (BA;US)
WAVE FORMS
Frequency Measurement
Construction of a broadband universal sampling head, 9:31590 (J;US)
Triangular Configuration
High precision triangular waveform generator, 9:31452 (P;US)
WAVE PROPAGATION
Mathematical Models
Numerical diffraction by a uniform grid, 9:32296 (TG;US)
WAVEFORMS
See WAVE FORMS
WAVES (SHOCK)
See SHOCK WAVES
WAZ 16
See NICKEL BASE ALLOYS
WEAK HADRONIC DECAY
Hamiltonians
Effective weak non-leptonic Hamiltonians for flavour-conserving processes, 9:32036 (J;GB)
WEAK INTERACTIONS
Weinberg-Salam Gauge Model
Why do we need better measurements of $\sin^2$ theta, rho and gauge boson masses, 9:32023 (R;GB)
WEAR
Tracer Techniques
Radioisotopes in wear investigation of combustion engines, 9:30427 (RA;SU)
Short-term measurements of wear on surfaces activated rails, 9:30428 (RA;SU)
Use of thin layer activation in tribological investigations, 9:30429 (RA;SU)
Wear testing in power stations, 9:30426 (RA;SU)
WECS
See WIND TURBINES
WEIGHING
See WEIGHT MEASUREMENT
WEIGHT INDICATORS
Radiometric Gages
New type of nuclear weighing device for transporter belts, 9:30424 (RA;SU)
WEIGHT MEASUREMENT
Portable Equipment
Semiportable load-cell-based weighing system prototype of 18.14-metric-ton (20-ton) capacity for UF_6 cylinder weight verifications: description and testing procedure, 9:30399 (R;US)
WEINBERG-SALAM GAUGE MODEL
Why do we need better measurements of $\sin^2$ theta, rho and gauge boson masses, 9:32023 (R;GB)
WELDED JOINTS
Performance
Service performance of dissimilar metal weldments in fossil-fired boilers, 9:30623 (RA;US)
WELDS
See WELDED JOINTS
WELL DRILLING
Drill Bits
Shock mounted Stratapax oil well drilling bits. Final technical report, 9:30228 (R;US)
Licensing
Economic-geological aspects of private investments in petroleum and gas drilling projects in the USA, 9:30231 (R;DE;In German)
WELL LOGGING EQUIPMENT
To be used only when the equipment itself is the topic of the paper; includes source, detector, and associated equipment.
Acoustic Measurements
Further development of a noise logging system, 9:30185 (R;DE;In German)
WEST GERMANY
See FEDERAL REPUBLIC OF GERMANY
WEST VIRGINIA
Geochemical Surveys
National Uranium Resource Evaluation stream-sediment, hydrogeochemical, and aeromagnetic data characteristics of the Piedmont Region, eastern United States: a data release, 9:30279 (R;US)
Hydrology
Hydrology of Area 6, Eastern Coal Province, Maryland, West Virginia, and Pennsylvania, 9:30190 (R;US)
Input-Output Analysis
Socio-economics, subsidence, transportation and legal ramifications of potential coal liquefaction plant sitings. Second quarterly report, January 1-March 31, 1984 (Contains input-output matrix for West Virginia), 9:30138 (R;US)
Land Use
Evaluation of four completed small watershed projects: South Carolina, Maryland, Idaho-Nevada, and West Virginia. Agricultural economic report, 9:31006 (R;US)
Magnetic Surveys
National Uranium Resource Evaluation stream-sediment, hydrogeochemical, and aeromagnetic data characteristics of the Piedmont Region, eastern United States: a data release, 9:30279 (R;US)
WESTERN REGION
See FEDERAL REGION IX
WET-TYPE COOLING TOWERS
See COOLING TOWERS
WHEAT
Productivity
Impact of ozone on yield of three cultivars of winter wheat, 9:31647 (RA;US)
WHITESHELL-1 REACTOR
See WR-1 REACTOR
WIND
See also TORNADOES
Maps
United States annual average wind power, 9:30598 (R;US)
Mathematical Models
Meteorological analysis for clusters of wind turbines, 9:30603 (R;US)
Measuring Instruments
Development of a simple wind speedometer for application in countries of the developing world, 9:30593 (R;DE;In German)
Monitoring
High yield wind energy resources in the mid-Hudson River basin. Final report, 9:30594 (R;US)
Resource Assessment
Wind prospecting in San Diego County, California, 9:30601 (R;US)
Spectra
Meteorological analysis for clusters of wind turbines, 9:30603 (R;US)
WIND ENERGY CONVERSION SYSTEMS
See WIND TURBINES
WIND GENERATORS
See ELECTRIC GENERATORS
WIND TURBINES
WIND POWER
Availability
Wind energy: a brief assessment, 9:30595 (R;US)
Economic Analysis
High yield wind energy resources in the mid-Hudson River basin. Final report, 9:30594 (R;US)
Economics
Wind energy: a brief assessment, 9:30595 (R;US)
WIND TURBINES
See also VERTICAL AXIS TURBINES
Alternators
Variable-speed constant-voltage constant-frequency alternator. Final report, 9:31382 (R;US)
Computerized Simulation
NASTRAN-based computer program for structural dynamic analysis of horizontal axis wind turbines, 9:30605 (R;US)

Design
Wind shear for large wind turbine generators at selected tall tower sites, 9:30602 (R;US)
Dynamic Loads
Fatigue modeling for small wind systems: basic theory, 9:30604 (R;US)
Dynamics
NASTRAN-based computer program for structural dynamic analysis of horizontal axis wind turbines, 9:30605 (R;US)
Fatigue
Fatigue modeling for small wind systems: basic theory, 9:30604 (R;US)
Performance
Direct gain passive solar, domestic hot water and wind generation system. Final technical report, 9:30553 (R;US)
Effect of site wind characteristics on energy production, 9:30606 (J;US)
High yield wind energy resources in the mid-Hudson River basin. Final report, 9:30594 (R;US)
Savonius Rotors
Aerodynamic study of a Savonius rotor, 9:30600 (R;FR;In French)
Shear Properties
Wind shear for large wind turbine generators at selected tall tower sites, 9:30602 (R;US)
Site Selection
Effect of site wind characteristics on energy production, 9:30606 (J;US)
High yield wind energy resources in the mid-Hudson River basin. Final report, 9:30594 (R;US)
Turbine Blades
Examination of the final design of the rotor blades GROWIAN I, 9:30597 (R;DE;In German)
Turbulence
Note on wind generator interaction (Wakes), 9:30596 (R;DK)

WINDOWS
Solar Control Films
Preventing solar heat gain through the south facing windows of the Bonneville Power Administration headquarters, 9:30546 (R;US)

WIRES
See also SUPERCONDUCTING WIRES
Aging
Study of ageing effects in wire chambers, 9:31599 (J;NL)

WISCONSIN
Geologic Deposits
Geology, hydrology, and mineral resources of crystalline rock areas of the Lake Superior Region, United States, 9:31825 (R;US)
Geology
Geology, hydrology, and mineral resources of crystalline rock areas of the Lake Superior Region, United States, 9:31825 (R;US)
Geology, hydrology, and mineral resources of crystalline rock areas of the Lake Superior region, United States. Part 1, 9:31824 (R;US)
Hydrology
Geology, hydrology, and mineral resources of crystalline rock areas of the Lake Superior region, United States. Part 1, 9:31824 (R;US)
Mineral Resources
Geology, hydrology, and mineral resources of crystalline rock areas of the Lake Superior region, United States. Part 1, 9:31824 (R;US)
Seismicity
Geology, hydrology, and mineral resources of crystalline rock areas of the Lake Superior Region, United States, 9:31825 (R;US)

WISCONSIN PUBLIC SERVICE POWER REACTOR
See KEWAUNEE REACTOR

WOLFRAM
See TUNGSTEN

WOLFRAMITE
Hyperfine Structure
Hyperfine field determination for wolframite (Fe,Mn)WO_4, 9:31158 (RA;BR)
Magnetic Fields
Hyperfine field determination for wolframite (Fe,Mn)WO_4, 9:31158 (RA;BR)

WOOD
Combustion Products
Wood-fired boiler test report (stick burner), 9:30488 (R;US)
Drying
Energy research in the mechanical forest industry 1980-1982. The improvment of the energy economy of particle drying, 9:31096 (R;FI;In Finnish)
Liquefaction
Transportation fuels from wood, 9:30479 (J;US)
Performance Testing
Wood-fired boiler test report (stick burner), 9:30488 (R;US)

WOOD ALCOHOL
See METHANOL

WOOD BURNING APPLIANCES
Catalytic Combustors
Study of the effectiveness of a catalytic combustion device on a wood burning appliance, 9:31458 (J;US)
Performance Testing
Study of the effectiveness of a catalytic combustion device on a wood burning appliance, 9:31458 (J;US)

WOOD PRODUCTS INDUSTRY
See also PAPER INDUSTRY
Energy Conservation
Energy research in the mechanical forest industry 1980-1982. The improvment of the energy economy of particle drying, 9:31096 (R;FI;In Finnish)
Energy Consumption
Energy reserch in the mechanical forest industry 1980-1982. Energy consumption in the manufacture of joinery products, wooden houses and in the further processing of sawn timber, 9:31095 (R;FI;In Finnish)
Energy research in the mechanical forest industry 1980-1982. Energy consumption in sawmill industry, 9:31097 (R;FI;In Finnish)

WOOD WASTES
Compacting
Pyrolysis and gasification kinetics of densified biomass. Final report, 9:30454 (R;US)
Flash Hydropyrolysis Process
Characterization of the products and comparison of the product yields from the flash pyrolysis of fir wood in hydrogen and helium, 9:30442 (R;US)
Gasification
Pyrolysis and gasification kinetics of densified biomass. Final report, 9:30454 (R;US)
Pyrolysis
Pyrolysis and gasification kinetics of densified biomass. Final report, 9:30454 (R;US)
Pyrolysis Products
Characterization of the products and comparison of the product yields from the flash pyrolysis of fir wood in hydrogen and helium, 9:30442 (R;US)

WORKERS
See PERSONNEL

WR-1 REACTOR
Performance
OCR - a western Canadian success story, 9:30848 (RA;CA)

WWER TYPE REACTORS
See also BOHUNICE V-2 REACTOR
Spent Fuel Storage
Storage of spent fuel of nuclear power plant with WWER-440 reactors, 9:30302 (RA;SU;In Russian)
Spent Fuels
Passive-X-ray fluorescence determination of the plutonium and uranium ratio in burnt-up fuel. Final report for the period 1 December 1981 - 30 November 1982, 9:30290 (R;AT)

WYOMING
Geochemical Surveys
Cody hydrothermal system, 9:30581 (R;US)
Geological Surveys
Cody hydrothermal system, 9:30581 (R;US)
Geophysical Surveys
Cody hydrothermal system, 9:30581 (R;US)

Hydrothermal Systems
Cody hydrothermal system, 9:30581 (R;US)
Small-Scale Hydroelectric Power Plants
Garland canal power project. Final technical and construction cost report, 9:30492 (R;US)

X

X RADIATION
See also SOFT X RADIATION
Dose-Response Relationships
Analysis of the soft x ray experiments, 9:31755 (RA;US)
Gratings
Calculation of the useful width of a system of two concave gratings mounted at grazing incidence, 9:31635 (TJ;US)
Microdosimetry
Analysis of the soft x ray experiments, 9:31755 (RA;US)
Optical Systems
Rutherford Appleton Laboratory symposium on new techniques in x-ray and xuv optics, 29th-30th July 1982, Abingdon, 9:31628 (R;GB)
RBE
Radiobiological aspects of encapsulated sources of iodine-125; RBE and PLDR, 9:31764 (RA;US)
XENOBIOTICS
Toxicity
Development of an in vivo assay for mistranslation: Inducing activity of pollutants and characterization of amino acid substitutions. Annual scientific report, 1 August 82-31 July 83, 9:31727 (R;US)
XENON
Electron Drift
Characteristic energy of low-energy electrons in Ne, Kr, and Xe gases, 9:31920 (RA;AT)
Measurement of eDsub(L)/μ of electrons in liquid xenon, 9:31913 (RA;AT)
Electron-Atom Collisions
High-Rydberg atom as a probe to low energy electron rare-gas collisions, 9:31914 (RA;AT)
Ion-Molecule Collisions
Population of nearly resonant Xesup(+*) states by charge transfer excitation from He^+ as studied spectroscopically in a flow drift tube (energy range: 0.04 - 2 eV; wavelength region: 584 - 1470 A), 9:31929 (RA;AT)
Liquids
Measurement of eDsub(L)/μ of electrons in liquid xenon, 9:31913 (RA;AT)
Muonic Atoms
μ^+ charge exchange and muonium formation in low pressure gases, 9:31959 (R;CA)
Pion Minus Reactions
Multiplicity distributions of protons with intermediate energies and of fast charged particles emitted in interactions of π-mesons and protons with atomic nuclei in 1.6-10.5 GeV energy range, 9:32124 (R;XJ;In Russian)
Pion Plus Reactions
Multiplicity distributions of protons with intermediate energies and of fast charged particles emitted in interactions of π-mesons and protons with atomic nuclei in 1.6-10.5 GeV energy range, 9:32124 (R;XJ;In Russian)
Proton Reactions
Multiplicity distributions of protons with intermediate energies and of fast charged particles emitted in interactions of π-mesons and protons with atomic nuclei in 1.6-10.5 GeV energy range, 9:32124 (R;XJ;In Russian)
XENON 118
Energy Levels
Dynamic moments of inertia in Xe, Cs and Ba nuclei, 9:32107 (R;US)
Moment of Inertia
Dynamic moments of inertia in Xe, Cs and Ba nuclei, 9:32107 (R;US)
XENON 122
Energy Levels
Dynamic moments of inertia in Xe, Cs and Ba nuclei, 9:32107 (R;US)
Moment of Inertia
Dynamic moments of inertia in Xe, Cs and Ba nuclei, 9:32107 (R;US)
XENON 128
Excited States
Low-lying excited states of ^{128}Xe, 9:32123 (R;XJ;In Russian)
Internal Conversion
Low-lying excited states of ^{128}Xe, 9:32123 (R;XJ;In Russian)
XENON EFFECT
See XENON OSCILLATIONS
XENON IONS
Electron-Ion Collisions
Electron-impact double ionization of rare-gas ions, 9:31974 (J;US)
XENON OSCILLATIONS
Computerized Simulation
Time-optimal control of spatial xenon oscillations to a generalized target, 9:30744 (J;US)
Optimal Control
Time-optimal control of spatial xenon oscillations to a generalized target, 9:30744 (J;US)
X-RASERS
See X-RAY LASERS
X-RAY DETECTION
Li-Drifted Si Detectors
Si(Li) x-ray detectors with amorphous Silicon passivation, 9:31576 (J;US)
X-RAY EMISSION ANALYSIS
See also PIXE ANALYSIS
X-RAY FLUORESCENCE ANALYSIS
Calibration Standards
Sample preparation techniques in trace element analysis by X-ray emission spectroscopy, 9:31623 (R;AT)
Sample Preparation
Sample preparation techniques in trace element analysis by X-ray emission spectroscopy, 9:31623 (R;AT)
X-RAY EQUIPMENT
See also X-RAY SOURCES
Reviews
Renaissance of x-ray optics, 9:31631 (J;US)
X-RAY FLUORESCENCE ANALYSIS
Instrumental aspects of tube-excited energy-dispersive X-ray fluorescence analysis, 9:31280 (RA;AT)
X-RAY FLUORESCENCE ANALYZERS
Microprocessors
Implementation of Intel 8080 - based microcomputer system in the radioisotope measurements control instrumentation, 9:31567 (RA;SU)
X-RAY LASERS
Diagnostics for an XUV/soft x-ray laser, 9:32381 (R;US)
Soft x-ray laser experiments at Novette Laser Facility, 9:32380 (R;US)
Nuclear Pumping
Multistep pumping schemes for short-wave lasers, 9:31412 (BA;US)
X-RAY SOURCES
For cosmic sources of x radiation use COSMIC X-RAY SOURCES.
Design
Low energy x ray facility, 9:30416 (RA;US)
X-RAY SPECTROMETERS
Design
Device for measuring optical characteristics of substances in the soft X radiation range, 9:31536 (R;SU;In Russian)
Gratings
Calculation of the useful width of a system of two concave gratings mounted at grazing incidence, 9:31635 (TJ;US)
XUV
See EXTREME ULTRAVIOLET RADIATION

Y

YANG-MILLS THEORY
Electrodynamics
Gravitation as Gauge theory of Poincare Group, 9:32045 (R;BR;In Portuguese)
YELLOW CAKE

YTTERBIUM
Electron Collisions
Electronic structure on metal surfaces by electron energy loss spectroscopy, 9:31885 (RA;AT)
Surface Properties
Electronic structure on metal surfaces by electron energy loss spectroscopy, 9:31885 (RA;AT)
YTTERBIUM 152
Beta-Plus Decay
Favoured β-transitions πhsub(11/2)->vhsub(9/2), 9:32127 (RA;DE;In German)
YTTERBIUM 171
Multipole Transitions
Coriolis force effect on electromagnetic properties of rotational bands of ^{171}Yb, 9:32131 (RA;SU;In Russian)
Rotational States
Coriolis force effect on electromagnetic properties of rotational bands of ^{171}Yb, 9:32131 (RA;SU;In Russian)
YTTRIUM ALLOYS
Lattice Parameters
Valence transition of uranium in (U,Y)Sb, 9:31190 (RA;IL)
YTTRIUM ALUMINIUM GARNETS
See ALUMINIUM OXIDES
FERRITE GARNETS
YTTRIUM COMPOUNDS
YTTRIUM COMPOUNDS
See also YTTRIUM OXIDES
Crystal Doping
Investigations of the crystallization process of neodymium doped YAG using radiotracers, 9:31317 (RA;SU)
Microstructure
Effect of crystallization of grain boundary phase on the high temperature strength of silicon nitride ceramics. Final report, April 1, 1980-March 31, 1984 (Sialon-YAG; Sialon-cordierite), 9:31224 (R;US)
Radioluminescence
Thermostimulated relaxation processes in $Y_3Al_5O_{12}$ and α-Al_2O_3 crystals, 9:31195 (RA;SU;In Russian)
Thermoluminescence
Thermostimulated relaxation processes in $Y_3Al_5O_{12}$ and α-Al_2O_3 crystals, 9:31195 (RA;SU;In Russian)
YTTRIUM OXIDES
Chemical Radiation Effects
Effect of electron irradiation on monocrystalline yttrium oxide (Y_2O_3) (700 keV electron beams), 9:31236 (TJ;US)
YUCCA MOUNTAIN
Bibliographies
Bibliography of the published reports, papers and articles on the Nevada Nuclear Waste Storage Investigations. Revision 4, 9:30347 (R;US)
Geology
Geohydrologic and drill-hole data for test well USW H-3, Yucca Mountain, Nye County, Nevada, 9:30362 (R;US)
Hydrology
Geohydrologic and drill-hole data for test well USW H-3, Yucca Mountain, Nye County, Nevada, 9:30362 (R;US)
Land Use
Land use and withdrawal actions necessary for and in support of the NNWSI project, 9:31694 (R;US)
Lithology
Geohydrologic and drill-hole data for test well USW H-3, Yucca Mountain, Nye County, Nevada, 9:30362 (R;US)
Radioactive Waste Disposal
Bibliography of the published reports, papers and articles on the Nevada Nuclear Waste Storage Investigations. Revision 4, 9:30347 (R;US)

REPORT NUMBER INDEX

The numbers assigned to reports cited in this publication appear in the first column of the index. Cross reference information and/or availability are included as appropriate. Abbreviations used in the availability column are elaborated at the end of the index. To expedite the filling of orders for reports from NTIS and TIC, an order number in the form, DE82000001 or TI82000001, appears in column 3. Order numbers with DE prefixes may be used in ordering from both NTIS and TIC. Numbers with TI prefixes are valid at TIC only. Requesters are urged to use this order number where provided. In column 4, one or more DOE distribution categories are indicated, e.g. , STD-10, MN-25. STD indicates distribution was made in full-size copy; MN indicates microcopy distribution; ND indicates no distribution was made. These category numbers are included to assist DOE librarians in responding to requests for reports in their collections. The UC (Unclassified Distribution Categories) are defined in DOE/TIC-4500, available from TIC. The citation numbers are given in column 5. NOTE: DOE attempts to disseminate its information as broadly as possible. Even though a report may contain some degree of illegibility, it is believed that the report may still make a contribution. The presence of a 1, 2, or 3 following NTIS in the availability column denotes the extent to which a report may be illegible and the form in which it is available: 1 = 1 to 5% illegibility, available PC and MF; 2 = 6 to 10% illegibility, available MF only; 3 = 11% or more illegibility, available PC only. For the users of DOE/RECON, report ordering may be accomplished more expeditiously via the on-line system. Employees of DOE or DOE contractors are urged to order from the Technical Information Center (TIC); all others should order from the National Technical Information Service (NTIS). Procedures for on-line ordering are detailed in the DOE/RECON User's Manual (DOE/TIC-4586).

AVAILABILITY OF REFERENCES ABSTRACTED

REPORTS

A document cited in this publication is considered a "report" when it carries a unique identifying number (e.g., ANL-3130, BNL-4000, DP-150, etc.) as the first element of the citation. Usually, one or more of the following abbreviations will appear at or near the end of the citation, indicating the organization from which the document is available. If none of these abbreviations appears, the report should be requested from either the cited publisher or corporate source.

GPO — Available from the Superintendent of Documents, U. S. Government Printing Office, Washington, DC 20402.

GPO Dep. — Available for inspection or interlibrary loan at GPO depository libraries. Unlimited DOE reports are being sent to the GPO depository libraries. See inside back cover for list of the libraries. These reports are identified by report number, Supt. of Docs. Class Number (E 1.99:) and TIC accession/order number, e.g., DE84003384.

NTIS — For sale by the National Technical Information Service (NTIS), 5285 Port Royal Road, Springfield, VA 22161. Paper copy (PC) price codes given are for domestic users; prices for foreign purchasers are in most instances twice the domestic price. There is only one microfiche (MF) price code, MF A01 ($4.50).

TIC — Available from the Office of Scientific and Technical Information, Technical Information Center, P. O. Box 62, Oak Ridge, TN 37831, Attn: Technical Information Division.

NOTE: DOE offices and contractors should order reports from TIC; all others should order from NTIS. For additional information, see the introductory paragraph to the Report Number Index.

NTIS NORTH AMERICAN PRICE CODES

Most NTIS products and services are now announced by price codes and, therefore, without specific prices in NTIS journals, newsletters and indexes.

The current dollar equivalent for each code is shown in the schedule below. Orders must list the accession number(s) and be accompanied by the total dollar amount from the current schedule.

NORTH AMERICAN CONTINENT PRICE SCHEDULE

Customers in Canada, United States, and Mexico please use this price schedule; other addressees, write for Folder PR-360-4.

NON-REPORT DOCUMENTS

BOOKS
Most books cited are available from commercial publishers. Order from the publisher or other source as given, not from TIC.

CONFERENCE PAPERS
Individual conference papers (or preprints) not available as reports should be requested from the originator or other source as cited.

CONFERENCE PROCEEDINGS
Many proceedings are available from commercial publishers; in other cases, request from the society, organization, institution, etc., cited as the source.

DISSERTATIONS (THESES)
Available from University Microfilms International, Dissertation Copies, P. O. Box 1764, Ann Arbor, MI 48106. Request by order number cited, e.g., DA83-22350.

JOURNAL ARTICLES
Users must use their own resources to obtain (or scan) articles cited—local, state, or university libraries or publishers, reprint services, etc.

MONOGRAPHS
Request from the organization, institution, society, etc., responsible for the monograph.

PATENTS
Although not cataloged as reports, patents cited from each country are listed in the Report Number Index under PATENTS-AU, PATENTS-FR, PATENTS-US, etc. U. S. Patent Applications (e.g., A 293,415) are available from NTIS.

CODES USED ON INDEX LINES

Following the citation numbers in the Corporate Author, Personal Author, and Subject Indexes, codes are used to designate the type of document, country of publication, and language of the document, e.g., (R:SU:In Russian). The language designator does not appear if the document is published in English.

FEDERAL DEPOSITORY LIBRARY PROGRAM

As a result of an agreement between the U. S. Government Printing Office (GPO) and the Department of Energy, beginning in 1984 DOE reports with unlimited distribution are now included in the Federal Depository Library Program. The Regional Depository Libraries listed below receive and retain at least one copy of nearly every Federal Government publication, either in printed or microfilm form, for use by the general public. These libraries provide reference services and interlibrary loans; however, they are *not* sales outlets. You may wish to ask your local library to contact a Regional Depository to help you locate specific publications, or you may contact the Regional Depository yourself. Do not send checks or orders to these libraries.

DOE/RECON SYSTEM

COMPUTER SEARCH SERVICE

DOE/RECON is an interactive on-line information retrieval system developed to provide rapid and easy access to energy-related data bases. It is available to DOE and contractor offices and to other federal government and state agencies with energy-related missions. The acronym RECON stands for REmote CONsole, which signifies that the system can be accessed by users located at various sites across the United States.

The system permits users to carry on a dialogue with the computer. This dialogue allows browsing through large data bases and can result in retrieval of citations which answer specific needs. Desired information can be selectively retrieved via simple yet powerful commands sent to the computer from the terminal keyboard.

Search logic may be formulated by the use of indexed terms, such as keywords, authors, categories, or corporate authors. As the search session progresses, AND, OR and NOT Boolean logic may be used to improve precision, i.e., the specificity of the retrieved set. For most data bases, the user may limit the scope of the search to particular years or volumes of data. Upon completion of a search, the user may choose to have the results displayed or printed at his/her terminal or to have the results printed and mailed the following day.

The DOE/RECON system is supported by dual IBM 370/3033 computers. Two IBM 3705 front-end communications computers are used to perform the message switching. Although most of the 40 data bases are bibliographic in content, DOE/RECON is not limited to this type; the Research in Progress (RIP) data base is one that is non-bibliographic. Presently, over 2 million references are available.

Requests for information concerning authorization to access the DOE/RECON system should be addressed to
